Approximate Area of Gray Wolf Activity, October 2018

This map serves to provide notification of localized wolf activity to landowners, livestock producers, and other interested parties. It illustrates known resident California wolf territories based on the best data available (e.g., tracks, trail camera images, credible sightings, GPS collar data). <u>This map does not include locations of dispersing wolves</u>, as dispersing wolves travel widely and their movements are unpredictable. This map will be updated quarterly or as warranted by new data.
