5. CENTRAL VALLEY SALMON SPORT FISHING

Today's Item Information ☐ Action ☒

Consider adopting proposed changes to Central Valley salmon sport fishing regulations.

Summary of Previous/Future Actions

Notice hearing
 Dec 12-13, 2018; Oceanside

Discussion hearing
 Feb 6, 2019; Sacramento

Discussion hearing
 Apr 17, 2019; Santa Monica

Today's adoption hearing
 May 16, 2019; Teleconference

Background

In Dec 2018, FGC authorized publication of notice of proposed changes to subsections 7.50(b)(5), et al., including a range of size, bag and possession limits for Sacramento River Fall-run Chinook Salmon (SRFC) in the American, Feather, Mokelumne, and Sacramento rivers to encompass possible Pacific Fishery Management Council (PFMC) 2019 recommendations for Central Valley salmon escapement goals. For consistency, FGC generally adopts regulations to bring state law into conformance with federal fishery management goals for Central Valley salmon.

The scope of options in the initial statement of reasons (ISOR; Exhibit 2) is intentionally broad to allow for flexibility in developing the final Central Valley salmon limits. A pre-season stock projection of 379,600 adult SRFC was released by PFMC in Mar 2019 (Exhibit 7), and the final escapement goals were established by PFMC at its Apr 9-16, 2019 meeting.

At today's FGC meeting, DFW will recommend specific size, bag and possession limits for SRFC based on the final escapement goals established by PFMC. FGC will consider adopting final changes to these regulations.

Three options are presented for consideration:

- Option 1 allows take of any size Chinook salmon up to the daily bag and possession limits;
- Option 2 allows for take of a limited number of adult (3-5 year-old) Chinook salmon, with grilse (two year-old) Chinook salmon making up the remainder of the daily bag and possession limits; or
- Option 3 allows for take of only grilse Chinook salmon up to the daily bag and possession limits.

When considering a grilse fishery, it is important to determine a size cut-off that balances angling harvest opportunity for male grilse versus preserving the limited number of females available to spawn. DFW is proposing a grilse salmon size limit range of less than or equal to 26 to 28 inches total length, and this size limit range will be discussed at today's FGC meeting.

STAFF SUMMARY FOR MAY 16, 2019 TELECONFERENCE

All options increase fishing opportunities on the Feather and Mokelumne rivers by: (1) extending the salmon fishing season by two weeks on the Feather River between the Thermalito Afterbay Outfall and the Live Oak boat ramp; and (2) extending the salmon and hatchery steelhead fishing season by two and one-half months on approximately ten miles of the Mokelumne River between the Highway 99 Bridge and Elliott Road.

California Environmental Quality Act (CEQA)

A draft negative declaration has been prepared (Exhibit 4) and was filed with the State Clearinghouse on Mar 22, 2019 (Exhibit 5).

The initial study and FGC staff review of the project showed that the project will not have any significant or potentially significant effects on the environment and, therefore, no alternatives or mitigation measures are proposed to avoid or reduce any significant effects on the environment. A draft negative declaration has been prepared and a notice of completion with the prepared draft negative declaration to be filed with the State Clearinghouse consistent with CEQA and Section 15205(e), Title 14, California Code of Regulations.

Significant Public Comments

- 1. One commenter opposes Options 2 and 3 in the ISOR, and supports status quo regulations (Exhibit 8).
- 2. One commenter clarified oral comments he made at the Apr 17, 2019 FGC discussion hearing; he requests inclusion of a jack Chinook salmon option in the Central Valley and parity with the bag limit in the Klamath River Basin (Exhibit 9).
- 3. A joint comment from four sport fishing organizations was received in support of DFW's proposed daily bag limit of two Chinook salmon (Exhibit 10).

DFW does not believe that the public comments received warrant changes to the proposed Central Valley salmon sport fishing regulation, for the reasons set forth in DFW's pre-adoption statement of reasons (PSOR; Exhibit 12).

Recommendation

FGC staff: Adopt the negative declaration prepared pursuant to CEQA in Exhibit 4 and adopt the proposed regulation changes as recommended by DFW.

DFW: Adopt Option 1 in the ISOR, which allows for take of any size Chinook salmon within the specified bag limit of two fish and possession limit of four fish for the American, Feather, Sacramento and Mokelumne rivers.

Exhibits

- 1. DFW memo transmitting ISOR, received Dec 3, 2018
- 2. ISOR
- 3. DFW memo transmitting draft negative declaration, received Mar 20, 2019
- 4. <u>Draft negative declaration</u>

- 5. Notice of completion, filed with State Clearinghouse Mar 22, 2019
- 6. Economic and fiscal impact statement (Std. 399)
- 7. <u>DFW news release, 'Slightly Improved' Forecast for California's 2019 Ocean Salmon Season</u>, published Mar 1, 2019
- 8. Email from Mike Brown, received Apr 16, 2019
- 9. Email from Mark Smith, received Apr 22, 2019
- Email from Mark Smith, transmitting letter from NorCal Guides and Sportsmen's
 Association, Coastside Fishing Club, American Sportfishing Association, and Coastal
 Conservation Association California, received Apr 30, 2019
- 11. DFW memo transmitting PSOR, received May 8, 2019
- 12. PSOR

Motion/Direction

Moved by _____ and seconded by _____ that the Commission adopts the negative declaration prepared pursuant to the California Environmental Quality Act, adopts the proposed project, and adopts proposed changes to subsections 7.50(b)(5), et al., relating to Central Valley salmon sport fishing regulations, as recommended today by the California Department of Fish and Wildlife.

State of California Department of Fish and Wildlife

Date: November 29, 2018

To: Melissa Miller-Henson

Acting Executive Director Fish and Game Commission

From: Charlton H. Bonham

Director

Subject: Submittal of Initial Statement of Reasons to Amend Central Valley Salmon Sport Fishing Regulations

Please find attached the Initial Statement of Reasons to amend subsections (b)(5), (b)(68), (b)(124), and (b)(156.5) of Section 7.50, Title 14, California Code of Regulations, for Chinook Salmon sport fishing regulations in the Central Valley.

For the 2019 Central Valley sport fishery, the California Department of Fish and Wildlife (Department) is presenting three regulatory options for the Commission's consideration to encompass possible Pacific Fishery Management Council (PFMC) 2019 recommendations for Sacramento River fall-run Chinook Salmon (SRFC) stocks. The purpose for providing options is to increase flexibility for development of the final Central Valley sport fishing regulations. The Department's preferred option, including specific bag and possession limits for SRFC, will be presented to the Commission after the PFMC adopts its final recommendations at its April 2019 meeting.

The draft negative declaration will be provided to the Commission prior to the discussion hearing.

If you have any questions or need additional information, please contact Kevin Shaffer, Chief, Fisheries Branch, by telephone at (916) 327-8841 or by e-mail at Kevin.Shaffer@wildlife.ca.gov. The public notice should identify Senior Environmental Scientist, Karen Mitchell, as the Department's point of contact for this rulemaking. Ms. Mitchell can be reached at (916) 445-0826 or by e-mail at Karen.Mitchell@wildlife.ca.gov.

(b) Discussion Hearing: Date: February 6, 2019

Location: Sacramento, CA

(c) Discussion Hearing: Date: April 17, 2019

Location: Santa Monica, CA

(d) Adoption Hearing: Date: May 16, 2019

Location: Teleconference

III. Description of Regulatory Action

(a) Statement of Specific Purpose of Regulation Change and Factual Basis for Determining that Regulation Change is Reasonably Necessary:

Unless otherwise specified, all section references in this document are to Title 14 of the California Code of Regulations.

Current regulations in subsections (b)(5), (b)(68), (b)(124) and (b)(156.5) of Section 7.50 prescribe the 2018 seasons and daily bag and possession limits for Sacramento River fall-run Chinook Salmon (*Oncorhynchus tshawytscha*; SRFC) sport fishing in the American, Feather, Mokelumne, and Sacramento rivers, respectively. Collectively, these four rivers constitute the "Central Valley fishery" for SRFC for purposes of this document. Each year, the Department of Fish and Wildlife (Department) recommends new Chinook Salmon bag and possession limits for consideration by the Fish and Game Commission (Commission) to align the fishing limits with up-to-date management goals, as set forth below.

The Pacific Fishery Management Council (PFMC) is responsible for adopting recommendations for the management of recreational and commercial ocean salmon fisheries in the Exclusive Economic Zone (three to 200 miles offshore) off the coasts of Washington, Oregon, and California. When approved by the Secretary of Commerce, these recommendations are implemented as ocean salmon fishing regulations by the National Marine Fisheries Service (NMFS).

The PFMC will develop the annual Pacific coast ocean salmon fisheries regulatory options for public review at its March 2019 meeting, and will adopt its final regulatory recommendations at its April 2019 meeting based on the PFMC salmon abundance estimates and recommendations for ocean harvest for the coming season. Based on the April 2019 recommendation by PFMC, the Department will recommend specific bag and possession limit regulations to the Commission at its April 17, 2019 meeting. The Commission will then consider adoption of the Central Valley salmon sport fishing regulations at its May 16, 2019 teleconference.

For the purpose of PFMC mixed-stock fishery modeling and salmon stock assessment, adult salmon are generally those considered three to five years in age, and grilse salmon are those approximately two years of age. The age classes are distinguished by a cutoff of salmon total length measurement, depending on the inland (in-river) fishery. For purposes of the proposed regulation, this cutoff is presented as a range of 26 to 28 inches total length, as outlined under the options for the proposed regulations (below).

Current Regulations

In 2018, salmon sport fishing in the Central Valley was constrained for the first time since 2010 due to a low SRFC stock abundance forecast. At its March 2018 meeting, the PFMC determined it would be necessary to specify an ocean/inland sharing arrangement for the limited SRFC available for harvest (take) in 2018 for ocean sport and commercial fisheries, and in-river recreational fisheries in the Central Valley. As a result, the Department agreed to a one-time limit of the in-river harvest to 15 percent of the total available SRFC harvest.

In December 2017, the Commission provided notice of a range of alternatives for the 2018 Central Valley fishery, including a suite of bag and possession limit alternatives that were area-specific. However, because the Department did not anticipate the impending SRFC stock collapse, this range of alternatives did not include a number of other measures that might have been used to constrain inland SRFC catches to stay within the federal harvest projections. Consequently, the only management measure the Department could recommend to the Commission to target the federal in-river harvest projection was a reduction in the daily bag limit from two fish to one fish in all areas that would be open to retention during 2018.

Proposed Regulations

The Department recognizes the uncertainty of SRFC in-river harvest projections. Therefore, for the 2019 Central Valley fishery, the Department is presenting three regulatory options for the Commission's consideration to tailor 2019 Central Valley fishery management to target 2019 in-river fisheries harvest projections.

- Option 1 is the most liberal of the three options and allows take of any size Chinook Salmon up to the daily bag and possession limits.
- Option 2 allows for take of a limited number of adult Chinook Salmon, with grilse Chinook Salmon making up the remainder of the daily bag and possession limits.

 Option 3 is the most conservative option and allows for a grilse-only Chinook Salmon fishery.

All three options increase fishing opportunities on the Feather and Mokelumne rivers by: (1) extending the salmon fishing season by two weeks on the Feather River between the Thermalito Afterbay Outfall and the Live Oak boat ramp; and (2) by extending the salmon and hatchery steelhead fishing season on approximately 10 miles of the Mokelumne River between the Highway 99 Bridge and Elliott Road. The expansion of fishing opportunity on 10 miles on the Mokelumne River for hatchery steelhead is buffered by the overall large run of hatchery steelhead, and because spawning occurs outside this stretch of river.

Grilse Chinook Salmon Fishery Size Considerations

Grilse salmon are salmon that spend two years in the ocean before returning to their natal streams to spawn. These fish are generally smaller in size and contribute less to the overall salmon population than adult salmon, which typically spend three to five years in the ocean before returning to freshwater to spawn. Typically, age-two salmon (grilse) are mostly males (jacks) with relatively few female (jills). Should a reduction in the adult component of the stock be imposed by PFMC harvest projections, the Department is recommending specifying angling opportunities on the smaller, and possibly more numerous grilse salmon. Take of adult salmon would be limited (Option 2) or prohibited (Option 3) under regulation, and the subsequent juvenile production would help rebuild the depressed stock size.

When considering a grilse fishery, determining a size cutoff that balances angling harvest opportunity for jacks versus preserving the limited number of females available to spawn is important. If the total length size cutoff is too short (conservative), too few jacks will be caught by anglers, and they will be underutilized because jacks are infrequently used as hatchery broodstock, or because jacks are out-competed by larger males in-river. If the cutoff is too large (liberal), then angling catch of the smaller females will increase, reducing the hatchery and in-river spawners, since the limiting factor for spawning is egg availability from jills and adult females. Therefore, the Department is proposing a grilse salmon size limit range of less than or equal to 26 to 28 inches total length (TL) for discussion before the Department makes a final recommendation. Considered in this context, the cutoff size discussion is a trade-off between restricting take of the available adult female salmon versus increasing harvest of possibly abundant smaller, two-year old male salmon.

A review of brood year 2008-2015 Central Valley Angler Survey coded wire tag recovery data (2,329 age three and 789 age two Chinook Salmon) shows a grilse to adult cutoff at approximately 27-inch fork length (FL). Using the adult spawning Chinook Salmon fork length to total length conversion formula developed in Pahlke 1988^a, 27-inch FL converts to 28.3-inch TL. Below are the percentages of adult SRFC that would be prohibited from harvest at a 26, 27, and 28-inch TL cutoff for grilse salmon.

^a Pahlke, K, 1988. Length Conversion Equations for Sockeye, Chinook, and Coho salmon in southeast Alaska. Regional Information Report No. Ij88-03. Alaska Department of Fish and Game Division of Commercial Fisheries, Southeast Region.

- On average, a grilse fishery with a 26-inch TL cutoff (i.e., less than or equal to 26 inches TL) would allow harvest of 65 percent of age-two Chinook Salmon, while not allowing harvest on 98.9 percent of age-three Chinook Salmon. It would prevent harvest on 99 percent of adult males and 98.9 percent of adult females, where the majority of harvested fish would be grilse.
- On average, a grilse fishery with a 27-inch TL cutoff (i.e., less than or equal to 27 inches TL) would allow harvest of 81 percent of age-two Chinook Salmon, while not allowing harvest on 97.3 percent of age-three Chinook Salmon. It would prevent harvest on 97.3 percent of adult males and 97.9 percent of adult females, where the majority of harvested fish would be grilse.
- On average, a grilse fishery with a 28-inch TL cutoff (i.e., less than or equal to 28 inches TL) would allow harvest of 93.4 percent of age-two Chinook Salmon, while not allowing harvest on 94.5 percent of age-three Chinook Salmon. It would prevent harvest on 95 percent of adult males and 96 percent of adult females, where the majority of harvested fish would be grilse.

Predicting the abundance of grilse for any given year is currently not possible because they are not susceptible to angling harvest prior to becoming grilse, and ocean abundance of pre-grilse sized fish is not monitored. The first indication of a large Central Valley grilse population is usually from in-river recreational fishing beginning in mid-July. Grilse numbers compared to adult numbers for a given year are usually not fully known until the following January, when spawner survey results are completed. For this reason, using an average of previous grilse data is a reasonable method of setting regulatory limits for future years.

Key to Proposed Regulatory Changes:

Because the PFMC recommendations are not known at this time, a range shown in [brackets] in the text below of bag and possession limits is indicated where it is desirable to continue Chinook Salmon fishing in the American, Feather, Mokelumne, and Sacramento rivers.

Bold text indicates changes to the in-river season or boundary.

The following options are provided for Commission consideration:

Option 1 – Any Size Chinook Salmon Fishery

This option would allow anglers to take up to [0-4] Chinook Salmon of any size per day. This option is the Department's preferred option if the 2019 SRFC stock abundance forecast is sufficiently high to avoid the need to constrain in-river SRFC harvest.

In addition, this option would extend the salmon fishing season by two weeks (to October 31) on the Feather River between the Thermalito Afterbay Outfall and the Live Oak boat ramp to allow for additional fishing opportunity. This section of the Feather River used to

provide spawning habitat for SRFC, but adult spawning has not been observed in this section of the Feather River for approximately 10 years. Allowing the take of salmon in this section of the Feather River during this time period will provide additional sport fishing opportunity without adversely impacting SRFC populations. Lastly, this option would provide additional fishing opportunity by extending the salmon season by two and one-half months (to December 31) and allowing year-round fishing on hatchery steelhead on approximately 10 miles of the Mokelumne River between the Highway 99 Bridge and Elliott Road. This would allow anglers to continue to fish lower in the river where no spawning is occurring. In addition, the Mokelumne River supports a large run of hatchery origin steelhead. Allowing the take of salmon and hatchery steelhead in this section of the Mokelumne River during this time period will provide additional sport fishing opportunity without adversely impacting populations of SRFC or wild steelhead.

American River, subsection 7.50(b)(5):

- (B) From the USGS gauging station cable crossing near Nimbus Hatchery to the SMUD power line crossing the southwest boundary of Ancil Hoffman Park.
 - July 16 through October 31 with a bag limit of [0-4] Chinook Salmon.
 - Possession limit [0-12] Chinook Salmon.
- (C) From the SMUD power line crossing at the southwest boundary of Ancil Hoffman Park to the Jibboom Street bridge.
 - July 16 through December 31 with a bag limit of [0-4] Chinook Salmon.
 - Possession limit [0-12] Chinook Salmon.
- (D) From the Jibboom Street bridge to the mouth.
 - July 16 through December 16 with a bag limit of [0-4] Chinook Salmon.
 - Possession limit [0-12] Chinook Salmon.

Feather River, subsection 7.50(b)(68):

- (D) From the unimproved boat ramp above the Thermalito Afterbay Outfall to 200 yards above the Live Oak boat ramp.
 - July 16 through **October 31** with a daily bag limit of [0-4] Chinook Salmon.
 - Possession limit [0-12] Chinook Salmon.
- (E) From 200 yards above the Live Oak boat ramp to the mouth.
 - July 16 through December 16 with a bag limit of [0-4] Chinook Salmon.

Possession limit – [0-12] Chinook Salmon.

Mokelumne River, subsection 7.50(b)(124):

- (A) From Camanche Dam to **Elliott Road**.
 - July 16 through October 15 with a bag limit of [0-4] Chinook Salmon.
 - Possession limit [0-12] Chinook Salmon.
- (B) From Elliott Road to the Woodbridge Irrigation District Dam and including Lodi Lake.
 From July 16 through December 31 with a bag limit of [0-4] Chinook Salmon.
 Possession limit [0-12] Chinook Salmon.
- (D) From the Lower Sacramento Road bridge to the mouth.
 From July 16 through December 16 with a bag limit of [0-4] Chinook Salmon.
 Possession limit [0-12] Chinook Salmon.

Sacramento River below Keswick Dam, subsection 7.50(b)(156.5):

- (C) From Deschutes Road bridge to the Red Bluff Diversion Dam.
 August 1 through December 16 with a bag limit of [0-4] Chinook Salmon
 Possession limit [0-12] Chinook Salmon.
- (D) From the Red Bluff Diversion Dam to the Highway 113 bridge.
 July 16 through December 16 with a bag limit of [0-4] Chinook Salmon.
 Possession limit [0-12] Chinook Salmon.
- (E) From the Highway 113 bridge to the Carquinez Bridge.
 July 16 through December 16 with a bag limit of [0-4] Chinook Salmon.
 Possession limit [0-12] Chinook Salmon.

Option 2 – Limited Adult and Grilse Salmon Fishery

This option would allow the take of a limited number of adult Chinook Salmon, with grilse Chinook Salmon making up the remainder of the daily bag and possession limits. Should a reduction in the adult component of the stock be imposed by PFMC harvest projections, the Department is recommending specifying angling opportunities on the smaller, and possibly more numerous grilse salmon to increase angling harvest opportunities. Take of adult salmon would be limited under regulation, and the subsequent juvenile production would help rebuild the depressed stock size at a time when there is the need to restrict harvest of adult salmon.

As with Option 1, Option 2 would extend the salmon fishing season by two weeks (to October 31) on the Feather River between the Thermalito Afterbay Outfall and the Live Oak boat ramp to allow for additional fishing opportunity. This section of the Feather River used to provide spawning habitat for SRFC, but adult spawning has not been observed in this section of the Feather River for approximately 10 years. Allowing the take of salmon in this section of the Feather River during this time period will provide additional sport fishing opportunity without adversely impacting SRFC populations. Lastly, this option would provide additional fishing opportunity by extending the salmon season by two and one-half months (to December 31) and allowing year-round fishing on hatchery steelhead on approximately 10 miles of the Mokelumne River between the Highway 99 Bridge and Elliott Road. This would allow anglers to continue to fish lower in the river where no spawning is occurring. In addition, the Mokelumne River supports a large run of hatchery origin steelhead. Allowing the take of salmon and hatchery steelhead in this section of the Mokelumne River during this time period will provide additional sport fishing opportunity without adversely impacting populations of SRFC or wild steelhead.

American River, subsection 7.50(b)(5):

- (B) From the USGS gauging station cable crossing near Nimbus Hatchery to the SMUD power line crossing the southwest boundary of Ancil Hoffman Park.
 - July 16 through October 31 with a bag limit of [0-4] Chinook Salmon of which no more than [0-4] fish over [26-28] inches total length may be retained.
 - Possession limit [0-12] Chinook Salmon of which no more than [0-4] fish may be over [26-28] inches total length.
- (C) From the SMUD power line crossing at the southwest boundary of Ancil Hoffman Park to the Jibboom Street bridge.
 - July 16 through December 31 with a bag limit of [0-4] Chinook Salmon of which no more than [0-4] fish over [26-28] inches total length may be retained.
 - Possession limit [0-12] Chinook Salmon of which no more than [0-4] fish may be over [26-28] inches total length.

(D) From the Jibboom Street bridge to the mouth.

July 16 through December 16 with a bag limit of [0-4] Chinook Salmon of which no more than [0-4] fish over [26-28] inches total length may be retained.

Possession limit - [0-12] Chinook Salmon of which no more than [0-4] fish may be over [26-28] inches total length.

Feather River, subsection 7.50(b)(68):

(D) From the unimproved boat ramp above the Thermalito Afterbay Outfall to 200 yards above the Live Oak boat ramp.

July 16 through **October 31** with a daily bag limit of [0-4] Chinook Salmon of which no more than [0-4] fish over [26-28] inches total length may be retained.

Possession limit - [0-12] Chinook Salmon of which no more than [0-4] fish may be over [26-28] inches total length.

(E) From 200 yards above the Live Oak boat ramp to the mouth.

July 16 through December 16 with a bag limit of [0-4] Chinook Salmon of which no more than [0-4] fish over [26-28] inches total length may be retained.

Possession limit – [0-12] Chinook Salmon of which no more than [0-4] fish may be over [26-28] inches total length.

Mokelumne River, subsection 7.50(b)(124)

(A) From Camanche Dam to Elliott Road.

July 16 through October 15 with a bag limit of [0-4] Chinook Salmon of which no more than [0-4] fish over [26-28] inches total length may be retained. Possession limit – [0-12] Chinook Salmon of which no more than [0-4] fish may be over [26-28] inches total length.

(B) From **Elliott Road** to the Woodbridge Irrigation District Dam and including Lodi Lake.

From July 16 through December 31 with a bag limit of [0-4] Chinook Salmon of which no more than [0-4] fish over [26-28] inches total length may be retained.

Possession limit – [0-12] Chinook Salmon of which no more than [0-4] fish may be over [26-28] inches total length.

(D) From the Lower Sacramento Road bridge to the mouth.

From July 16 through December 16 with a bag limit of [0-4] Chinook Salmon of which no more than [0-4] fish over [26-28] inches total length may be retained.

Possession limit – [0-12] Chinook Salmon of which no more than [0-4] fish may be over [26-28] inches total length.

Sacramento River below Keswick Dam, subsection 7.50(b)(156.5):

(C) From Deschutes Road bridge to the Red Bluff Diversion Dam.

August 1 through December 16 with a bag limit of [0-4] Chinook Salmon of which no more than [0-4] fish over [26-28] inches total length may be retained.

Possession limit – [0-12] Chinook Salmon of which no more than [0-4] fish may be over [26-28] inches total length.

(D) From the Red Bluff Diversion Dam to the Highway 113 bridge.

July 16 through December 16 with a bag limit of [0-4] Chinook Salmon of which no more than [0-4] fish over [26-28] inches total length may be retained.

Possession limit – [0-12] Chinook Salmon of which no more than [0-4] fish may be over [26-28] inches total length.

(E) From the Highway 113 bridge to the Carquinez Bridge.

July 16 through December 16 with a bag limit of [0-4] Chinook Salmon of which no more than [0-4] fish over [26-28] inches total length may be retained.

Possession limit – [0-12] Chinook Salmon of which no more than [0-4] fish may be over [26-28] inches total length.

Option 3 – Grilse-only Salmon Fishery

This option would allow for a grilse-only salmon fishery. Should a reduction in the adult component of the stock be imposed by PFMC harvest projections, the Department is recommending specifying angling opportunities on the smaller, and possibly more numerous grilse salmon to increase angling harvest opportunities. Take of adult salmon would be prohibited under regulation, and the subsequent juvenile production would help rebuild the depressed stock size at a time when there is the need to restrict harvest of adult salmon.

As with Options 1 and 2, Option 3 would extend the salmon fishing season by two weeks (to October 31) on the Feather River between the Thermalito Afterbay Outfall and the Live Oak boat ramp to allow for additional fishing opportunity. This section of the Feather River used to provide spawning habitat for SRFC, but adult spawning has not been observed in this section of the Feather River for approximately 10 years. Allowing the take of salmon in

this section of the Feather River during this time period will provide additional sport fishing opportunity without adversely impacting SRFC populations. Lastly, this option would provide additional fishing opportunity by extending the salmon season by two and one-half months (to December 31) and allowing year-round fishing on hatchery steelhead on approximately 10 miles of the Mokelumne River between the Highway 99 Bridge and Elliott Road. This would allow anglers to continue to fish lower in the river where no spawning is occurring. In addition, the Mokelumne River supports a large run of hatchery origin steelhead. Allowing the take of salmon and hatchery steelhead in this section of the Mokelumne River during this time period will provide additional sport fishing opportunity without adversely impacting populations of SRFC or wild steelhead.

American River, subsection 7.50(b)(5):

- (B) From the USGS gauging station cable crossing near Nimbus Hatchery to the SMUD power line crossing the southwest boundary of Ancil Hoffman Park.
 - July 16 through October 31 with a bag limit of [0-4] Chinook Salmon less than or equal to [26-28] inches total length.
 - Possession limit [0-12] Chinook Salmon less than or equal to [26-28] inches total length.
- (C) From the SMUD power line crossing at the southwest boundary of Ancil Hoffman Park to the Jibboom Street bridge.
 - July 16 through December 31 with a bag limit of [0-4] Chinook Salmon less than or equal to [26-28] inches total length.
 - Possession limit [0-12] Chinook Salmon less than or equal to [26-28] inches total length.
- (D) From the Jibboom Street bridge to the mouth.
 - July 16 through December 16 with a bag limit of [0-4] Chinook Salmon less than or equal to [26-28] inches total length.
 - Possession limit [0-12] Chinook Salmon less than or equal to [26-28] inches total length.

Feather River, subsection 7.50(b)(68):

- (D) From the unimproved boat ramp above the Thermalito Afterbay Outfall to the Live Oak boat ramp.
 - July 16 through **October 31** with a daily bag limit of [0-4] Chinook Salmon less than or equal to [26-28] inches total length.

Possession limit - [0-12] Chinook Salmon less than or equal to [26-28] inches total length.

(E) From 200 yards above the Live Oak boat ramp to the mouth.

July 16 through December 16 with a bag limit of [0-4] Chinook Salmon less than or equal to [26-28] inches total length.

Possession limit - [0-12] Chinook Salmon less than or equal to [26-28] inches total length.

Mokelumne River, subsection 7.50(b)(124):

(A) From Camanche Dam to Elliott Road

July 16 through October 15 with a bag limit of [0-4] Chinook Salmon less than or equal to [26-28] inches total length.

Possession limit - [0-12] Chinook Salmon less than or equal to [26-28] inches total length.

(B) From **Elliott Road** to the Woodbridge Irrigation District Dam and including lake Lodi.

From July 16 through December 31 with a bag limit of [0-4] Chinook Salmon less than or equal to [26-28] inches total length.

Possession limit - [0-12] Chinook Salmon less than or equal to [26-28] inches total length.

(D) From the Lower Sacramento Road bridge to the mouth.

From July 16 through December 16 with a bag limit of [0-4] Chinook Salmon less than or equal to [26-28] inches total length.

Possession limit - [0-12] Chinook Salmon less than or equal to [26-28] inches total length.

Sacramento River below Keswick Dam, subsection 7.50(b)(156.5):

(C) From Deschutes Road bridge to the Red Bluff Diversion Dam.

August 1 through December 16 with a bag limit of [0-4] Chinook Salmon less than or equal to [26-28] inches total length.

Possession limit - [0-12] Chinook Salmon less than or equal to [26-28] inches total length.

(D) From the Red Bluff Diversion Dam to the Highway 113 bridge.

July 16 through December 16 with a bag limit of [0-4] Chinook Salmon less than or equal to [26-28] inches total length.

Possession limit - [0-12] Chinook Salmon less than or equal to [26-28] inches total length.

(E) From the Highway 113 bridge to the Carquinez Bridge.

July 16 through December 16 with a bag limit of [0-4] Chinook Salmon less than or equal to [26-28] inches total length.

Possession limit - [0-12] Chinook Salmon less than or equal to [26-28] inches total length.

Necessity of the Proposed Regulation Changes

The proposed regulations are necessary to adjust Chinook Salmon bag and possession limits, size limits, and open seasons for the American, Feather, Mokelumne, and Sacramento rivers for consistency with PFMC salmon abundance estimates and recommendations for ocean harvest for the coming season. The proposed regulatory changes will maximize salmon and steelhead fishing opportunity where possible through the proposed extensions of season end dates for portions of the Feather and Mokelumne Rivers, without adversely affecting SRFC or wild steelhead.

OTHER CHANGES:

Under all options, changes are proposed to fix punctuation and to remove the extra word "in" in subsection 7.50(b)(124)(A).

(b) Goals and Benefits of the Regulation:

It is the policy of this State to encourage the conservation, maintenance, and utilization of the living resources of the ocean and other waters under the jurisdiction and influence of the State for the benefit of all the citizens of the State and to promote the development of local fisheries and distant water fisheries based in California in harmony with international law, respecting fishing and the conservation of the living resources of the ocean and other waters under the jurisdiction and influence of the State. The objectives of this policy include, but are not limited to, the maintenance of sufficient populations of all species of aquatic organisms to ensure their continued existence, and the maintenance of a sufficient resource to support a reasonable sport use.

Adoption of scientifically-based SRFC bag and possession limits provides for the maintenance of sufficient populations of Chinook Salmon to ensure their continued existence.

The benefits of the proposed regulations are consistency with federal fishery management goals, sustainable management of Central Valley Chinook Salmon resources, general

health and welfare of California residents, and promotion of businesses that rely on Central Valley Chinook Salmon sport fishing.

(c) Authority and Reference Sections from Fish and Game Code for Regulation:

Authority: Sections 200, 205, 265, 270, 315, 316.5, and 399 Fish and Game Code.

Reference: Sections 200, 205, 265, 270 and 316.5, Fish and Game Code.

- (d) Specific Technology or Equipment Required by Regulatory Change: None.
- (e) Identification of Reports or Documents Supporting Regulation Change:

Pahlke, K, 1988. Length Conversion Equations for Sockeye, Chinook, and Coho salmon in southeast Alaska. Regional Information Report No. Ij88-03. Alaska Department of Fish and Game Division of Commercial Fisheries, Southeast Region.

(f) Public Discussions of Proposed Regulations Prior to Notice Publication:

No public meetings are being held prior to the notice publication. The 45-day comment period provides adequate time for review of the proposed amendments.

- IV. Description of Reasonable Alternatives to Regulatory Action
 - (a) Alternatives to Regulation Change:

No alternatives were identified by or brought to the attention of Commission staff that would have the same desired regulatory effect.

(b) No Change Alternative:

The no change alternative would leave existing 2018 regulations in place. The no-change alternative would not allow for appropriate harvest rates, while the proposed regulations will allow the state to harmonize its bag and possession limits with NMFS' regulations.

V. Mitigation Measures Required by Regulatory Action

The proposed regulatory action will have no negative impact on the environment; therefore, no mitigation measures are needed.

VI. Impact of Regulatory Action

The potential for significant statewide adverse economic impacts that might result from the proposed regulatory action has been assessed, and the following initial determinations relative to the required statutory categories have been made:

(a) Significant Statewide Adverse Economic Impact Directly Affecting Businesses, Including the Ability of California Businesses to Compete with Businesses in Other States:

The proposed action will not have a significant statewide adverse economic impact directly affecting business, including the ability of California businesses to compete with businesses in other states. The proposed changes are necessary for the continued preservation of the resource, while providing inland sport fishing opportunities and thus, the prevention of adverse economic impacts.

(b) Impact on the Creation or Elimination of Jobs Within the State, the Creation of New Businesses or the Elimination of Existing Businesses, or the Expansion of Businesses in California; Benefits of the Regulation to the Health and Welfare of California Residents, Worker Safety, and the State's Environment:

The Commission does not anticipate adverse impacts, but acknowledges the potential for short-term negative impacts on the creation or elimination of jobs within the state. The Commission anticipates no adverse impacts on the creation of new business, the elimination of existing businesses or the expansion of businesses in California (see Table 1). Minor variations in the bag and possession limits and/or the implementation of a size limit are unlikely to significantly impact the volume of business activity. The loss of up to 20 jobs with Option 3 is not expected to eliminate businesses because reduced fishing days will be partially offset by the extension of the salmon fishing season on portions of the Feather and Mokelumne rivers and by opportunities to fish for grilse Chinook Salmon and other species.

The Commission anticipates benefits to the health and welfare of California residents. Providing opportunities for a Chinook Salmon sport fishery encourages consumption of a nutritious food. The Commission anticipates benefits to the environment by the sustainable management of California's Chinook Salmon resources in the Central Valley.

The Commission does not anticipate any benefits to worker safety.

Other benefits of the proposed regulations are concurrence with federal fishery management goals and promotion of businesses that rely on Central Valley Chinook Salmon sport fishing.

(c) Cost Impacts on a Representative Private Person or Business:

The Commission is not aware of any cost impacts that a representative private person or business would necessarily incur in reasonable compliance with the proposed action.

- (d) Costs or Savings to State Agencies or Costs/Savings in Federal Funding to the State: None.
- (e) Nondiscretionary Costs/Savings to Local Agencies: None.
- (f) Programs Mandated on Local Agencies or School Districts: None.
- (g) Costs Imposed on Any Local Agency or School District that is Required to be Reimbursed Under Part 7 (commencing with Section 17500) of Division 4, Government Code: None.

(h) Effect on Housing Costs: None.

VII. Economic Impact Assessment

The regulatory amendments of subsections (b)(5), (b)(68), (b)(124), and (b)(156.5) of Section 7.50 under consideration will set the 2019 sport fishing regulations for Chinook Salmon in the American, Feather, Mokelumne, and Sacramento rivers, respectively, for consistency with PFMC in-river harvest projections.

Option 1 would allow anglers to take any size Chinook Salmon up to the daily bag limit [0-4] and possession limit [0-12] (most liberal option).

Option 2 would allow for take of a limited number of adult Chinook Salmon, with grilse Chinook Salmon making up the remainder of the daily bag limit [0-4] and possession limit [0-12].

Option 3 is the most conservative option and allows for take of only grilse Chinook Salmon up to the daily bag limit [0-4] and possession limit [0-12]. Take of adult salmon would not be allowed.

All three options increase fishing opportunities on the Feather and Mokelumne rivers by: (1) extending the salmon fishing season by two weeks on the Feather River between the Thermalito Afterbay Outfall and the Live Oak boat ramp; and (2) by extending the salmon and hatchery steelhead fishing season on approximately 10 miles of the Mokelumne River between the Highway 99 Bridge and Elliott Road.

In a normal season, the Central Valley fall Chinook Salmon fishery generates \$18,536,979 in total economic output and supports 130 jobs. The regional and statewide economic impacts factor into the effort to balance the maintenance of the recreational fishery with resource preservation, while complying with PFMC recommendations. The potential economic impacts that may result from each in-river harvest projection as specified in Option 1, Option 2, and Option 3 are evaluated in terms of each scenario's probable impact on the number of angler days, and thus area spending.

Table 1. Central Valley Salmon Fishery Economic Impacts (2017\$)

Regulation	Angler Days	Angler Expenditures		Total Econ Impact	Jobs
Option 1	179,550	\$ 13,182,320	\$	18,536,979	130
Option 2	161,595	\$ 11,864,088	\$	16,682,731	120
Option 3	143,640	\$ 10,545,856	\$	14,829,094	110
Difference	Angler Day Loss	Expenditure Loss		Total Impact Loss	Job Loss
Difference Option 1	<u> </u>	\$ Expenditure Loss	\$	Total Impact Loss	Job Loss
	<u> </u>	Expenditure Loss - 1,318,232	\$ \$	Total Impact Loss - 1,854,248	Job Loss 0 10

Sources: CDFW Fisheries Branch economic analysis; U.S. Fish and Wildlife Service, 2016 National Survey of Fishing, Hunting, and Wildlife-Associated Recreation; dollar figures adjusted for inflation with Implicit Price Deflator for Personal Consumption Expenditures, Bureau of Economic Analysis.

Historical correlations between catch limits and fishery participation levels suggest that Option 1 could enable a historically average number of angler days for the 2019 Chinook Salmon season on the American, Feather, Mokelumne, and Sacramento rivers. Option 2 may result in declines in angler days of 17,955 below an average year. Option 3 may result in larger declines or about 35,910 fewer angler days.

For all options, the proposed extensions of season end dates for portions of the Feather and Mokelumne Rivers would extend the period of angler regional economic contributions. Additionally, anglers may pursue other in-river sport fish aside from Chinook salmon, such as steelhead (*Oncorhynchus mykiss*), striped bass (*Morone saxatilis*), largemouth bass (*Micropterus salmoides*), sturgeon (*Acipenser transmontanus*) and catfish (*Ictalurus spp.*), that may mitigate any adverse impacts from any reductions in salmon fishing. In sum, the options presented to the Commission were conceived with the goal of enabling levels of recreational SRFC fishing in the range of historical averages, and thus should not be a source of significant adverse economic impacts.

(a) Effects of the Regulation on the Creation or Elimination of Jobs Within the State

The Commission does not anticipate that any of the proposed options would induce substantial impacts on the creation or elimination of jobs. For Option 1, no change in job creation or elimination is anticipated. Option 2 and Option 3 have the potential to result in fewer angler visits, and absent substitution toward other sportfish and/or activities in the affected areas, the reduction in angler spending could reduce the support for 10 - 20 jobs statewide. These job impacts are statewide and may be moderated by the additional two and one-half months of fishing opportunity on approximately 10 miles of the Mokelumne River between the Highway 99 bridge and Elliott Road, and by the additional two weeks of fishing opportunity on the Feather River between the Thermalito Afterbay Outfall and the Live Oak boat ramp.

(b) Effects of the Regulation on the Creation of New Businesses or the Elimination of Existing Businesses Within the State

The Commission does not anticipate that any of the proposed options would induce substantial impacts on the creation of new business or the elimination of existing businesses, because the proposed changes to the regulations are unlikely to be substantial enough to stimulate the creation of new businesses or cause the elimination of existing businesses. The season extensions for portions of the Mokelumne and Feather rivers are expected to sustain the number of fishing trips and the level of economic stimulus within historical averages.

(c) Effects of the Regulation on the Expansion of Businesses Currently Doing Business Within the State

The Commission does not anticipate that any of the proposed options would induce substantial impacts on the expansion of businesses currently doing business within the state. The proposed regulations are not anticipated to increase demand for services or products from the existing businesses that serve inland sport fishermen. The number of

fishing trips and angler economic contributions are expected to remain within the range of historical averages.

(d) Benefits of the Regulation to the Health and Welfare of California Residents

The Commission anticipates benefits to the health and welfare of California residents. Chinook Salmon is a nutritious food source and providing inland sport fishery opportunities encourages consumption of this nutritious food. Sport fishing also contributes to increased mental health of its practitioners, as fishing is a hobby and form of relaxation for many. Sport fishing also provides opportunities for multi-generational family activities and promotes respect for California's environment by younger generations, the future stewards of California's natural resources.

(e) Benefits of the Regulation to Worker Safety

The Commission does not anticipate any benefits to worker safety from the proposed regulations because inland sport fishing does not impact working conditions.

(f) Benefits of the Regulation to the State's Environment

Under all Options 1-3, the Commission anticipates benefits to the environment in the sustainable management of Central Valley Chinook Salmon. It is the policy of this State to encourage the conservation, maintenance, and utilization of the living resources of the ocean and other waters under the jurisdiction and influence of the State for the benefit of all the citizens of the State and to promote the development of local fisheries and distant water fisheries based in California in harmony with international law, respecting fishing and the conservation of the living resources of the ocean and other waters under the jurisdiction and influence of the State. The objectives of this policy include, but are not limited to, the maintenance of sufficient populations of all species of aquatic organisms to ensure their continued existence, and the maintenance of a sufficient resource to support a reasonable sport use.

In accordance with this policy, adoption of scientifically-based inland Chinook Salmon bag and possession limits provides for the maintenance of sufficient populations of salmon to ensure their continued existence and thus continued economic stimulus.

(g) Other Benefits of the Regulation

Other benefits of the regulation include consistency with federal fishery management goals and the promotion of businesses that rely on Central Valley Salmon sport fishing.

Informative Digest/Policy Statement Overview

Unless otherwise specified, all section references in this document are to Title 14 of the California Code of Regulations.

Current regulations in subsections (b)(5), (b)(68), (b)(124) and (b)(156.5) of Section 7.50 prescribe the 2018 seasons and daily bag and possession limits for Sacramento River fall-run Chinook Salmon (*Oncorhynchus tshawytscha*; SRFC) sport fishing in the American, Feather, Mokelumne, and Sacramento rivers, respectively. Collectively, these four rivers constitute the "Central Valley fishery" for SRFC. Each year, the Department of Fish and Wildlife (Department) recommends new Chinook Salmon bag and possession limits for consideration by the Fish and Game Commission (Commission) to align fishing limits with up-to-date management goals, as set forth below.

The Pacific Fishery Management Council (PFMC) is responsible for adopting recommendations for the management of recreational and commercial ocean salmon fisheries in the Exclusive Economic Zone (three to 200 miles offshore) off the coasts of Washington, Oregon, and California. When approved by the Secretary of Commerce, these recommendations are implemented as ocean salmon fishing regulations by the National Marine Fisheries Service (NMFS).

The PFMC will develop the annual Pacific coast ocean salmon fisheries regulatory options for public review at its March 2019 meeting and will adopt its final regulatory recommendations at its April 2019 meeting based on the PFMC salmon abundance estimates and recommendations for ocean harvest (take) for the coming season. Based on the April 2019 recommendations by PFMC, the Department will recommend specific bag and possession limit regulations to the Commission at its April 17, 2019 meeting. The Commission will then consider adoption of the regulations at its May 16, 2019 teleconference.

For the purpose of PFMC mixed-stock fishery modeling and salmon stock assessment, adult salmon are generally those considered three to five years in age, and grilse salmon are those approximately two years of age. The age classes are distinguished by a cutoff of salmon total length measurement, depending on the in-river fishery. For purposes of the proposed regulation, this cutoff is presented as a range of 26 to 28 inches total length, as outlined under the options for the proposed regulations (below).

Proposed Regulations

The Department recognizes the uncertainty of Sacramento River fall-run Chinook Salmon (SRFC) inland (in-river) harvest projections. Therefore, the Department is presenting three regulatory options for the Commission's consideration to tailor 2019 Central Valley fishery management to target 2019 in-river fisheries harvest projections.

 Option 1 is the most liberal of the three options and allows take of any size Chinook Salmon up to the daily bag and possession limits.

- Option 2 allows for take of a limited number of adult Chinook Salmon, with grilse Chinook Salmon making up the remainder of the daily bag and possession limits.
- Option 3 is the most conservative option and allows for a grilse-only Chinook Salmon fishery.

All three options increase fishing opportunities on the Feather and Mokelumne rivers by: (1) extending the salmon fishing season by two weeks on the Feather River between the Thermalito Afterbay Outfall and the Live Oak boat ramp; and (2) by extending the salmon and hatchery steelhead fishing season on approximately 10 miles of the Mokelumne River between the Highway 99 Bridge and Elliott Road.

All options would be applicable to the following river segments and time periods:

American River, subsection 7.50(b)(5):

- (B) From the USGS gauging station cable crossing near Nimbus Hatchery to the SMUD power line crossing the southwest boundary of Ancil Hoffman Park, July 16 through October 31
- (C) From the SMUD power line crossing at the southwest boundary of Ancil Hoffman Park to the Jibboom Street bridge, July 16 through December 31
- (D) From the Jibboom Street bridge to the mouth, July 16 through December 16

Feather River, subsection 7.50(b)(68):

- (D) From the unimproved boat ramp above the Thermalito Afterbay Outfall to 200 yards above the Live Oak boat ramp, July 16 through October 31
- (E) From 200 yards above the Live Oak boat ramp to the mouth, July 16 through December 16

Mokelumne River, subsection 7.50(b)(124):

- (A) From Comanche Dam to Elliott Road, July 16 through October 15
- (B) From Elliott Road to the Woodbridge Irrigation District Dam and including Lodi Lake, July 16 through December 31
- (D) From the Lower Sacramento Road bridge to the mouth, July 16 through December 16

Sacramento River below Keswick Dam, subsection 7.50(b)(156.5):

- (C) From Deschutes Road bridge to the Red Bluff Diversion Dam, August 1 through December 16
- (D) From the Red Bluff Diversion Dam to the Highway 113 bridge, July 16 through December 16.
- (E) From the Highway 113 bridge to the Carquinez Bridge, July 16 through December 16.

The following options are provided for Commission consideration:

Option 1 – Any Size Chinook Salmon Fishery

This option is the Department's preferred option if the 2019 SRFC stock abundance forecast is sufficiently high to avoid the need to constrain inland SRFC harvest.

Bag limit of [0-4] Chinook Salmon.

Possession limit - [0-12] Chinook Salmon.

Option 2 – Limited Adult and Grilse Salmon Fishery

Bag limit of [0-4] Chinook Salmon of which no more than [0-4] fish over [26-28] inches total length may be retained.

Possession limit - [0-12] Chinook Salmon of which no more than [0–4] fish may be over [26-28] inches total length.

Option 3 - Grilse Salmon Fishery Only

Bag limit of [0-4] Chinook Salmon less than or equal to [26-28] inches total length.

Possession limit - [0-12] Chinook Salmon less than or equal to [26-28] inches total length.

OTHER CHANGES:

Under all options, changes are proposed to fix punctuation and to remove the extra word "in" in subsection 7.50(b)(124(A).

Benefits of the Proposed Regulations

The Commission anticipates benefits to the environment in the sustainable management of Central Valley Chinook Salmon resources. Other benefits of the proposed regulations are consistency with federal fishery management goals, health and welfare of California residents, and promotion of businesses that rely on Central Valley Chinook Salmon sport fishing.

Consistency and Compatibility with Existing Regulations

Article IV, Section 20 of the State Constitution specifies that the Legislature may delegate to the Fish and Game Commission such powers relating to the protection and propagation of fish and game as the Legislature sees fit. The Legislature has delegated to the Commission the power to regulate recreational fishing in waters of the state (Fish and Game Code sections 200, 205, 315 and 316.5). The Commission has reviewed its own regulations and finds that the proposed regulations are neither inconsistent nor incompatible with existing state regulations. The Commission has searched the California Code of Regulations and finds no other state agency regulations pertaining to Chinook Salmon recreational fishing seasons, bag and possession limits for Central Valley sport fishing.

Proposed Regulatory Language - Option 1 (Any-size Chinook Salmon fishery)

Section 7.50, Title 14, CCR is amended to read:

§ 7.50. Alphabetical List of Waters with Special Fishing Regulations.

... [No changes to subsections (a) through (b)(4)]

Body of Water	Open Season and Special Regulations	Daily Bag and Possession Limit
(5) American River (Sacramento Co.) Co.).		
(A) From Nimbus Dam to the U.S. Geological Survey gauging station cable crossing about 300 yards downstream from the Nimbus Hatchery fish rack site.	Closed to all fishing all year.	
(B) From the U.S. Geological Survey gauging station cable crossing about 300 yards downstream from the Nimbus Hatchery fish rack site to the SMUD power line crossing at the southwest boundary of Ancil Hoffman Park.	Jan. 1 through July 15. Only barbless hooks may be used.	2 hatchery trout or hatchery steelhead**. 4 hatchery trout er.or hatchery steelhead** in possession.
	July 16 through Oct. 31. Only barbless hooks may be used.	2 hatchery trout or hatchery steelhead**. 4 hatchery trout or hatchery steelhead** in possession. 4[0-4] Chinook Salmon. 2[0-12] Chinook Salmon in possession.

(C) From the SMUD power line crossing at the southwest boundary of Ancil Hoffman Park downstream to the Jibboom Street bridge.	Jan. 1 through July 15.	2 hatchery trout or hatchery steelhead**. 4 hatchery trout or hatchery steelhead** in possession.
	July 16 through Dec. 31.	2 hatchery trout or hatchery steelhead**. 4 hatchery trout or hatchery steelhead** in possession. 4[0-4] Chinook Salmon. 2[0-12] Chinook Salmon in possession.
(D) From the Jibboom Street bridge to the mouth.	Jan. 1 through July 15.	2 hatchery trout or hatchery steelhead**. 4 hatchery trout or hatchery steelhead** in possession.
	July 16 through Dec. 16.	2 hatchery trout or hatchery steelhead**. 4 hatchery trout or hatchery steelhead** in possession. 4[0-4] Chinook Salmon.

	2[0-12] Chinook Salmon in possession.
Dec. 17 through Dec. 31.	2 hatchery trout or hatchery steelhead**. 4 hatchery trout or hatchery steelhead** in possession.

...[No changes to subsections (b)(6) through (b)(67)]

Body of Water	Open Season and Special Regulations	Daily Bag and Possession Limit
(68) Feather River below Fish Barrier Dam (Butte, Sutter and Yuba cos.).		
(A) From Fish Barrier Dam to Table Mountain bicycle bridge in Oroville.	Closed to all fishing all yearyear.	
(B) From Table Mountain bicycle bridge to Highway 70 bridge.	Jan. 1 through July 15. Only barbless hooks may be used.	2 hatchery trout or hatchery steelhead**. 4 hatchery trout or hatchery steelhead** in possession.
(C) From Highway 70 bridge to the unimproved boat ramp above the Thermalito Afterbay Outfall.	All year.	2 hatchery trout or hatchery

		steelhead**. 4 hatchery trout or hatchery steelhead** in possession.
(D) From the unimproved boat ramp above the Thermalito Afterbay Outfall to 200 yards above the Live Oak boat ramp.	Jan. 1 through July 15.	2 hatchery trout or hatchery steelhead**. 4 hatchery trout orhatcheryor hatchery steelhead** in possession.

STATE OF CALIFORNIA NATURAL RESOURCES AGENCY FISH AND GAME COMMISSION NEGATIVE DECLARATION

FOR

PROPOSED AMENDMENTS
TO
CENTRAL VALLEY SALMON SPORT FISHING REGULATIONS
TITLE 14, CALIFORNIA CODE OF REGULATIONS

Prepared by:

California Department of Fish and Wildlife Fisheries Branch

This Report Has Been Prepared Pursuant to the California Environmental Quality Act of 1970
State of California
Natural Resources Agency
Fish and Game Commission

State Clearinghouse #

INITIAL STUDY AND NEGATIVE DECLARATION FOR PROPOSED AMENDMENTS

CENTRAL VALLEY SALMON SPORT FISHING REGULATIONS TITLE 14, CALIFORNIA CODE OF REGULATIONS

The Project

The Fish and Game Commission (Commission) proposes to amend the Central Valley salmon sport fishing regulations as set forth in Title 14 of the California Code of Regulations. The current 2018 sport fishing regulations, Section 7.50, Title 14, California Code of Regulations, allow for salmon fishing in the American, Feather, Mokelumne, and Sacramento rivers. Each year the Department of Fish and Wildlife (Department) evaluates the potential need to amend the existing Chinook Salmon bag and possession limits and seasons to align with management goals. Any proposed changes to the salmon fishing regulations are presented to the Commission for consideration.

The Findings

The initial study and the Commission's review of the project showed that the project will not have any significant or potentially significant effects on the environment and therefore no alternatives or mitigation measures are proposed to avoid or reduce any significant effects on the environment. The project will not have a significant effect on aesthetics, agriculture and forestry resources, air quality, biological resources, cultural resources, energy, geology and soils, greenhouse gas emissions, hazards and hazardous materials, hydrology and water quality, land use and planning, mineral resources, noise, population and housing, public services, recreation, transportation, tribal cultural resources, utilities and service systems, and wildfire.

Basis of the Findings

Based on the initial study, implementing the proposed project will not have any significant or potentially significant effects on the environment. Therefore, a negative declaration is filed pursuant to the California Environmental Quality Act, Public Resource Code Section 21080, subdivision (c).

This proposed negative declaration consists of the following:

- Introduction Project Description and Background Information on the Proposed Amendments to Central Valley Salmon Sport Fishing Regulations
- Initial Study Environmental Checklist Form
- Explanation of the Response to the Initial Study Environmental Checklist Form

PROJECT DESCRIPTION AND BACKGROUND INFORMATION FOR PROPOSED AMENDMENTS TO

CENTRAL VALLEY SALMON SPORT FISHING REGULATIONS TITLE 14, CALIFORNIA CODE OF REGULATIONS

Introduction

Annually, the Department recommends Central Valley salmon sport fishing regulations to the Commission. The Commission then makes the final determination on what amendments to the regulations should be implemented, and is the lead agency for the purposes of CEQA. Under Fish and Game Code Section 200, the Commission has the authority to regulate the taking or possession of fish for the purpose of sport fishing.

Project goals and objectives

The goal of this project is to amend the Central Valley salmon sport fishing regulations in furtherance of the state's policy on conservation, maintenance, and utilization of California's aquatic resources stated in Fish and Game Code Section 1700. This section includes the following objectives:

- 1. Maintain sufficient populations of all aquatic species to ensure their continued existence.
- 2. Maintain sufficient resources to support a reasonable sport use.
- 3. Management of fisheries using best available science and public input.

Background

The Pacific Fishery Management Council (PFMC) is responsible for adopting recommendations for the management of recreational and commercial ocean salmon fisheries in the Exclusive Economic Zone, which is located three to 200 miles off the coasts of Washington, Oregon, and California. When approved by the Secretary of Commerce, these recommendations are implemented as ocean salmon fishing regulations by the National Marine Fisheries Service (NMFS).

The PFMC will develop the annual Pacific coast ocean salmon fisheries regulatory options for public review at its March 2019 meeting and develop the final PFMC regulatory recommendations for adoption by NMFS at its April 2019 meeting. Based on the regulations adopted by NMFS, the Department will recommend specific bag and possession limits to the Commission during a scheduled teleconference hearing on May 16, 2019.

The proposed salmon sport fishing regulations for the American, Feather, Mokelumne, and Sacramento rivers may:

(1) allow for additional harvest of salmon to reduce impacts to spawning habitat if

low instream flow conditions occur; and

(2) increase or decrease the current salmon bag and possession limits based on the PFMC salmon abundance estimates and recommendations for ocean harvest for the coming season.

Project Location

Central Valley salmon sport fishing addressed by this environmental document occurs in the waters of the American, Feather, Mokelumne, and Sacramento rivers in northern and Central California in the counties of Siskiyou, Shasta, Tehama, Colusa, Butte, Yuba, Sutter, Placer, El Dorado, Sacramento, Yolo, Solano, Contra Costa, and San Joaquin.

Schedule

If adopted by the Commission and approved by the Office of Administrative Law, the proposed regulatory amendments described below will go into effect around July 1, 2019.

Project Description

<u>Current Regulations</u>

In 2018, salmon sport fishing in the Central Valley was constrained for the first time since 2010 due to a low Sacramento River fall-run Chinook Salmon (SRFC) stock abundance forecast. At its March 2018 meeting, the PFMC determined it would be necessary to specify an ocean/inland sharing arrangement for the limited SRFC available for harvest (take) in 2018 for ocean sport and commercial fisheries, and in-river recreational fisheries in the Central Valley. As a result, the Department agreed to a one-time limit of the in-river harvest to 15 percent of the total available SRFC harvest.

In December 2017, the Commission provided notice of a range of alternatives for the 2018 Central Valley fishery, including a suite of bag and possession limit alternatives that were area-specific. However, because the Department did not anticipate the impending SRFC stock collapse, this range of alternatives did not include a number of other measures that might have been used to constrain inland SRFC catches to stay within the federal harvest projections. Consequently, the only management measure the Department could recommend to the Commission to target the federal in-river harvest projection was a reduction in the daily bag limit from two fish to one fish in all areas that would be open to retention during 2018.

Proposed Regulations

The Department recognizes the uncertainty of SRFC in-river harvest projections. Therefore, for the 2019 Central Valley fishery, the Department is presenting three regulatory options for the Commission's consideration to tailor 2019 Central Valley

fishery management to target 2019 in-river fisheries harvest projections.

- Option 1 is the most liberal of the three options and allows take of any size Chinook Salmon up to the daily bag and possession limits.
- Option 2 allows for take of a limited number of adult Chinook Salmon, with grilse Chinook Salmon making up the remainder of the daily bag and possession limits.
- Option 3 is the most conservative option and allows for a grilse-only Chinook Salmon fishery.

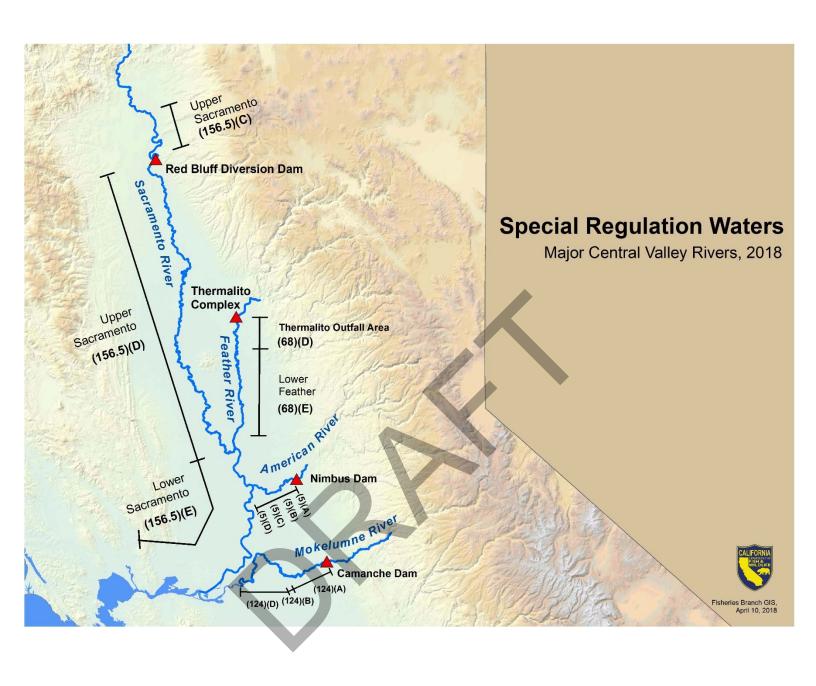

All three options increase fishing opportunities on the Feather and Mokelumne rivers. First, the project would extend the salmon fishing season by two weeks (to October 31) on the Feather River between the Thermalito Afterbay Outfall and the Live Oak boat ramp to allow for additional fishing opportunity. This section of the Feather River used to provide spawning habitat for SRFC, but adult spawning has not been observed in this section of the Feather River for approximately 10 years. Allowing the take of salmon in this section of the Feather River during this time period will provide additional sport fishing opportunity without adversely impacting SRFC populations.

In addition, the project would provide additional fishing opportunity by extending the salmon season by two and one-half months (to December 31) and allowing year-round fishing on hatchery steelhead on approximately 10 miles of the Mokelumne River between the Highway 99 Bridge and Elliott Road. This extension would allow anglers to continue to fish lower in the river where no spawning is occurring. In addition, the Mokelumne River supports a large run of hatchery origin steelhead. Allowing the take of salmon and hatchery steelhead in this section of the Mokelumne River during this time period will provide additional sport fishing opportunity without adversely impacting populations of SRFC or wild steelhead.

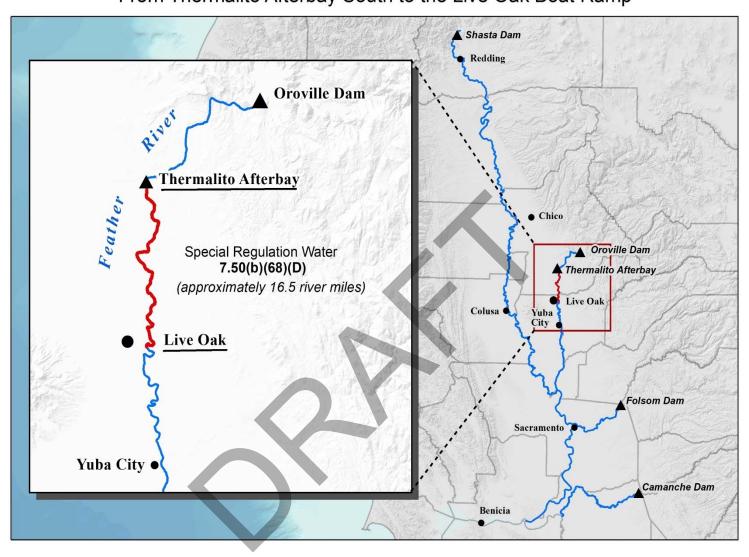

Key to Proposed Regulatory Changes:

Because the PFMC recommendations are not known at this time, a range shown in [brackets] in the text below of bag and possession limits is indicated where it is desirable to continue Chinook Salmon fishing in the American, Feather, Mokelumne, and Sacramento rivers.

Bold text indicates changes to the in-river season or boundary.

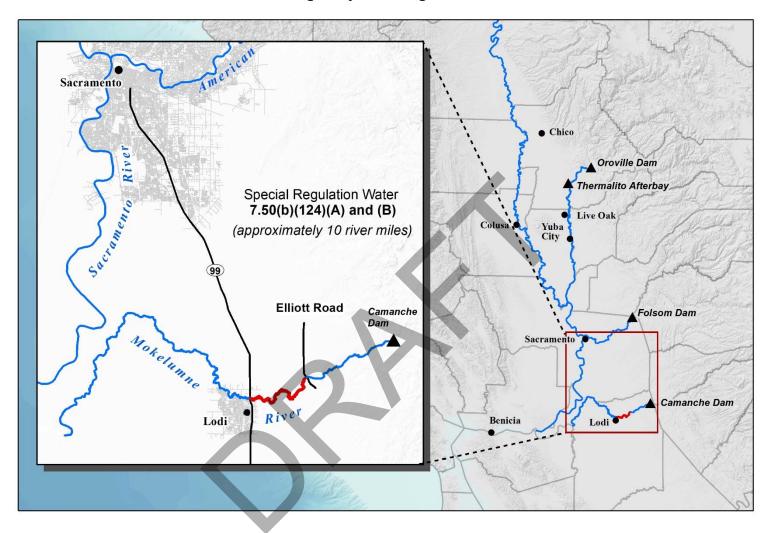

Feather River Proposal: Extend Salmon Fishing Season from Oct 15 to Oct 31
From Thermalito Afterbay South to the Live Oak Boat Ramp

Mokelumne River Proposal: Extend Salmon and Hatchery Steelhead Fishing Seasons on Approximately 10 Miles of River

Between the Highway 99 Bridge and Elliott Road

Option 1 - Any Size Chinook Salmon Fishery

This option would allow anglers to take up to [0-4] Chinook Salmon of any size per day. This option is the Department's preferred option if the 2019 SRFC stock abundance forecast is sufficiently high to avoid the need to constrain in-river SRFC harvest.

American River, subsection 7.50(b)(5):

- (B) From the USGS gauging station cable crossing near Nimbus Hatchery to the SMUD power line crossing the southwest boundary of Ancil Hoffman Park.
 - July 16 through October 31 with a bag limit of [0-4] Chinook Salmon.

- Possession limit [0-12] Chinook Salmon.
- (C) From the SMUD power line crossing at the southwest boundary of Ancil Hoffman Park to the Jibboom Street bridge.
 - July 16 through December 31 with a bag limit of [0-4] Chinook Salmon.
 - Possession limit [0-12] Chinook Salmon.
- (D) From the Jibboom Street bridge to the mouth.
 - July 16 through December 16 with a bag limit of [0-4] Chinook Salmon.
 - Possession limit [0-12] Chinook Salmon.

Feather River, subsection 7.50(b)(68):

- (D) From the unimproved boat ramp above the Thermalito Afterbay Outfall to 200 yards above the Live Oak boat ramp.
 - July 16 through **October 31** with a daily bag limit of [0-4] Chinook Salmon.
 - Possession limit [0-12] Chinook Salmon.
- (E) From 200 yards above the Live Oak boat ramp to the mouth.
 - July 16 through December 16 with a bag limit of [0-4] Chinook Salmon.
 - Possession limit [0-12] Chinook Salmon.

Mokelumne River, subsection 7.50(b)(124):

- (A) From Camanche Dam to Elliott Road.
 - July 16 through October 15 with a bag limit of [0-4] Chinook Salmon.
 - Possession limit [0-12] Chinook Salmon.
- (B) From **Elliott Road** to the Woodbridge Irrigation District Dam and including Lodi Lake.
 - From July 16 through December 31 with a bag limit of [0-4] Chinook Salmon.
 - Possession limit [0-12] Chinook Salmon.
- (D) From the Lower Sacramento Road bridge to the mouth.
 - From July 16 through December 16 with a bag limit of [0-4] Chinook Salmon.

Possession limit – [0-12] Chinook Salmon.

Sacramento River below Keswick Dam, subsection 7.50(b)(156.5):

- (C) From Deschutes Road bridge to the Red Bluff Diversion Dam.
 August 1 through December 16 with a bag limit of [0-4] Chinook Salmon
 Possession limit [0-12] Chinook Salmon.
- (D) From the Red Bluff Diversion Dam to the Highway 113 bridge.
 July 16 through December 16 with a bag limit of [0-4] Chinook Salmon.
 Possession limit [0-12] Chinook Salmon.
- (E) From the Highway 113 bridge to the Carquinez Bridge.
 July 16 through December 16 with a bag limit of [0-4] Chinook Salmon.
 Possession limit [0-12] Chinook Salmon.

Option 2 - Limited Adult and Grilse Salmon Fishery

This option would allow the take of a limited number of adult Chinook Salmon, with grilse Chinook Salmon making up the remainder of the daily bag and possession limits. Should a reduction in the adult component of the stock be imposed by PFMC harvest projections, the Department is recommending specifying angling opportunities on the smaller, and possibly more numerous grilse salmon to increase angling harvest opportunities. Take of adult salmon would be limited under regulation, and the subsequent juvenile production would help rebuild the depressed stock size at a time when there is the need to restrict harvest of adult salmon.

American River, subsection 7.50(b)(5):

- (B) From the USGS gauging station cable crossing near Nimbus Hatchery to the SMUD power line crossing the southwest boundary of Ancil Hoffman Park.
 - July 16 through October 31 with a bag limit of [0-4] Chinook Salmon of which no more than [0-4] fish over [26-28] inches total length may be retained.
 - Possession limit [0-12] Chinook Salmon of which no more than [0-4] fish may be over [26-28] inches total length.

- (C) From the SMUD power line crossing at the southwest boundary of Ancil Hoffman Park to the Jibboom Street bridge.
 - July 16 through December 31 with a bag limit of [0-4] Chinook Salmon of which no more than [0-4] fish over [26-28] inches total length may be retained.
 - Possession limit [0-12] Chinook Salmon of which no more than [0-4] fish may be over [26-28] inches total length.
- (D) From the Jibboom Street bridge to the mouth.
 - July 16 through December 16 with a bag limit of [0-4] Chinook Salmon of which no more than [0-4] fish over [26-28] inches total length may be retained.
 - Possession limit [0-12] Chinook Salmon of which no more than [0-4] fish may be over [26-28] inches total length.

Feather River, subsection 7.50(b)(68):

- (D) From the unimproved boat ramp above the Thermalito Afterbay Outfall to 200 yards above the Live Oak boat ramp.
 - July 16 through **October 31** with a daily bag limit of [0-4] Chinook Salmon of which no more than [0-4] fish over [26-28] inches total length may be retained.
 - Possession limit [0-12] Chinook Salmon of which no more than [0-4] fish may be over [26-28] inches total length.
- (E) From 200 yards above the Live Oak boat ramp to the mouth.
 - July 16 through December 16 with a bag limit of [0-4] Chinook Salmon of which no more than [0-4] fish over [26-28] inches total length may be retained.
 - Possession limit [0-12] Chinook Salmon of which no more than [0-4] fish may be over [26-28] inches total length.

Mokelumne River, subsection 7.50(b)(124)

- (A) From Camanche Dam to Elliott Road.
 - July 16 through October 15 with a bag limit of [0-4] Chinook Salmon of which no more than [0-4] fish over [26-28] inches total length may be retained.
 - Possession limit [0-12] Chinook Salmon of which no more than [0-4] fish may be over [26-28] inches total length.
- (B) From Elliott Road to the Woodbridge Irrigation District Dam and including Lodi

Lake.

From July 16 through December 31 with a bag limit of [0-4] Chinook Salmon of which no more than [0-4] fish over [26-28] inches total length may be retained.

Possession limit – [0-12] Chinook Salmon of which no more than [0-4] fish may be over [26-28] inches total length.

(D) From the Lower Sacramento Road bridge to the mouth.

From July 16 through December 16 with a bag limit of [0-4] Chinook Salmon of which no more than [0-4] fish over [26-28] inches total length may be retained.

Possession limit – [0-12] Chinook Salmon of which no more than [0-4] fish may be over [26-28] inches total length.

Sacramento River below Keswick Dam, subsection 7.50(b)(156.5):

(C) From Deschutes Road bridge to the Red Bluff Diversion Dam.

August 1 through December 16 with a bag limit of [0-4] Chinook Salmon of which no more than [0-4] fish over [26-28] inches total length may be retained.

Possession limit – [0-12] Chinook Salmon of which no more than [0-4] fish may be over [26-28] inches total length.

(D) From the Red Bluff Diversion Dam to the Highway 113 bridge.

July 16 through December 16 with a bag limit of [0-4] Chinook Salmon of which no more than [0-4] fish over [26-28] inches total length may be retained.

Possession limit – [0-12] Chinook Salmon of which no more than [0-4] fish may be over [26-28] inches total length.

(E) From the Highway 113 bridge to the Carquinez Bridge.

July 16 through December 16 with a bag limit of [0-4] Chinook Salmon of which no more than [0-4] fish over [26-28] inches total length may be retained.

Possession limit – [0-12] Chinook Salmon of which no more than [0-4] fish may be over [26-28] inches total length.

Option 3 – Grilse-only Salmon Fishery

This option would allow for a grilse-only salmon fishery. Should a reduction in the adult component of the stock be imposed by PFMC harvest projections, the Department is recommending specifying angling opportunities on the smaller, and possibly more

numerous grilse salmon to increase angling harvest opportunities. Take of adult salmon would be prohibited under regulation, and the subsequent juvenile production would help rebuild the depressed stock size at a time when there is the need to restrict harvest of adult salmon.

American River, subsection 7.50(b)(5):

- (B) From the USGS gauging station cable crossing near Nimbus Hatchery to the SMUD power line crossing the southwest boundary of Ancil Hoffman Park.
 - July 16 through October 31 with a bag limit of [0-4] Chinook Salmon less than or equal to [26-28] inches total length.
 - Possession limit [0-12] Chinook Salmon less than or equal to [26-28] inches total length.
- (C) From the SMUD power line crossing at the southwest boundary of Ancil Hoffman Park to the Jibboom Street bridge.
 - July 16 through December 31 with a bag limit of [0-4] Chinook Salmon less than or equal to [26-28] inches total length.
 - Possession limit [0-12] Chinook Salmon less than or equal to [26-28] inches total length.
- (D) From the Jibboom Street bridge to the mouth.
 - July 16 through December 16 with a bag limit of [0-4] Chinook Salmon less than or equal to [26-28] inches total length.
 - Possession limit [0-12] Chinook Salmon less than or equal to [26-28] inches total length.

Feather River, subsection 7.50(b)(68):

- (D) From the unimproved boat ramp above the Thermalito Afterbay Outfall to the Live Oak boat ramp.
 - July 16 through **October 31** with a daily bag limit of [0-4] Chinook Salmon less than or equal to [26-28] inches total length.
 - Possession limit [0-12] Chinook Salmon less than or equal to [26-28] inches total length.
- (E) From 200 yards above the Live Oak boat ramp to the mouth.

July 16 through December 16 with a bag limit of [0-4] Chinook Salmon less than or equal to [26-28] inches total length.

Possession limit - [0-12] Chinook Salmon less than or equal to [26-28] inches total length.

Mokelumne River, subsection 7.50(b)(124):

(A) From Camanche Dam to Elliott Road

July 16 through October 15 with a bag limit of [0-4] Chinook Salmon less than or equal to [26-28] inches total length.

Possession limit - [0-12] Chinook Salmon less than or equal to [26-28] inches total length.

(B) From **Elliott Road** to the Woodbridge Irrigation District Dam and including lake Lodi.

From July 16 through December 31 with a bag limit of [0-4] Chinook Salmon less than or equal to [26-28] inches total length.

Possession limit - [0-12] Chinook Salmon less than or equal to [26-28] inches total length.

(D) From the Lower Sacramento Road bridge to the mouth.

From July 16 through December 16 with a bag limit of [0-4] Chinook Salmon less than or equal to [26-28] inches total length.

Possession limit - [0-12] Chinook Salmon less than or equal to [26-28] inches total length.

Sacramento River below Keswick Dam, subsection 7.50(b)(156.5):

(C) From Deschutes Road bridge to the Red Bluff Diversion Dam.

August 1 through December 16 with a bag limit of [0-4] Chinook Salmon less than or equal to [26-28] inches total length.

Possession limit - [0-12] Chinook Salmon less than or equal to [26-28] inches total length.

(D) From the Red Bluff Diversion Dam to the Highway 113 bridge.

July 16 through December 16 with a bag limit of [0-4] Chinook Salmon less than or equal to [26-28] inches total length.

Possession limit - [0-12] Chinook Salmon less than or equal to [26-28] inches total length.

(E) From the Highway 113 bridge to the Carquinez Bridge.

July 16 through December 16 with a bag limit of [0-4] Chinook Salmon less than or equal to [26-28] inches total length.

Possession limit - [0-12] Chinook Salmon less than or equal to [26-28] inches total length.

ENVIRONMENTAL CHECKLIST FORM

1. Project Title:

Proposed Amendments to Central Valley Salmon Sport Fishing Regulations, Title 14, California Code of Regulations

 Lead Agency Name and Address: California Fish and Game Commission 1416 Ninth Street, Suite 1320 Sacramento. CA 95814

3. Contact Person and Phone Number: Melissa Miller-Henson, (916) 653-4899

4. Project Location:

The American, Feather, Sacramento, and Mokelumne rivers.

Project Sponsor's Name and Address:

 California Department of Fish and Wildlife
 Fisheries Branch
 830 S Street
 Sacramento, CA 95811

6. General Plan designation:

N/A (statewide)

7. Zoning:

N/A (statewide)

8. Description of Project:

Potentially amend the daily bag and possession limits and fishing seasons for the Central Valley salmon sport fishery to maintain consistency with the Department's mission to manage California's diverse fisheries resources for their ecological value, their use and for the public's enjoyment.

9. Surrounding land uses and setting:

N/A

10. Other Public Agencies Whose Approval Is Required:

None.

11. Have California Native American tribes traditionally and culturally affiliated with the project area requested consultation pursuant to Public Resources Code section 21080.31?

No.

ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED:

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

CHEC	riecklist off the following pages.

facto	rs listed above; therefore,	no k	ooxes are checked.			
DET	DETERMINATION:					
On th	On the basis of this initial evaluation:					

I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.
I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.
I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.
I find that the proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
I. AESTHETICS. Except as provided in Public Resources Code Section 21099, would the project:				
a) Have a substantial adverse effect on a scenic vista				
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway				
c) Substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality.				
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?				

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
RESOURCES. In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment Project; and the forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the project:				
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to nonagricultural use?				
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?				

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	_
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?				
d) Result in the loss of forest land or conversion of forest land to non-forest use?				
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?				
III. AIR QUALITY. Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. Would the project:				
a) Conflict with or obstruct implementation of the applicable air quality plan?				
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non- attainment under an applicable federal or state ambient air quality standard?				
c) Expose sensitive receptors to substantial pollutant concentrations?				
d) Result in any other emissions such as those leading to odors affecting a substantial number of people?				
IV. BIOLOGICAL RESOURCES. Would the project:				

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	_	No Impact
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?				
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?				
c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?				
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?				
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?				
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?				
V. CULTURAL RESOURCES. Would the project:				
a) Cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5?				

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	_
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?				
c) Disturb any human remains, including those interred outside of formal cemeteries?				
VI. ENERGY. Would the project:				\boxtimes
a) Result in potentially significant environmental impact due to wasteful inefficient, or unnecessary consumption of energy resources, during project construction or operations?				
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?				
VII. GEOLOGY AND SOILS. Would the project:				
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:				
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42?				
ii) Strong seismic ground shaking?				\boxtimes
iii) Seismic-related ground failure, including liquefaction?				
iv) Landslides?				
b) Result in substantial soil erosion or the loss of topsoil?				
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?				

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?				
e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?				
f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?				
VIII. GREENHOUSE GAS EMISSIONS. Would the project:				
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?				
b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?				
IX. HAZARDS AND HAZARDOUS MATERIALS. Would the project:				
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?				\boxtimes
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?				
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?				

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	_
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?				
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?				
f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?				
g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?				
X. HYDROLOGY AND WATER QUALITY. Would the project:				
a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality?				
b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?				
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:				
i) result in substantial erosion or siltation on- or off-site?				

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	
ii) substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite;				
iii) create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage system or provide substantial additional sources of pollution runoff; or				
d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?				
e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?				
XI. LAND USE AND PLANNING. Would the project:				
a) Physically divide an established community?				
b) Cause a significant environmental impact due to a conflict any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?				
XII. MINERAL RESOURCES. Would the project:				
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?				
b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?				
XIII. NOISE. Would the project result in:				
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local				

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
general plan or noise ordinance, or applicable standards of other agencies?				
b) Generation of excessive groundborne				\boxtimes
vibration or groundborne noise levels?				
c) For a project located within the vicinity				\boxtimes
of a private airstrip or an airport land use				
plan or, where such a plan has not been adopted, within two miles of a public				
airport or public use airport, would the				
project expose people residing or working				
in the project area to excessive noise				
levels? XIV. POPULATION AND HOUSING.				
Would the project: a) Induce substantial unplanned population				\square
growth in an area, either directly (for				
example, by proposing new homes and				
businesses) or indirectly (for example,				
through extension of roads or other				
infrastructure)? b) Displace substantial numbers of existing				\square
people or housing, necessitating the				\boxtimes
construction of replacement housing				
elsewhere?				
XV. PUBLIC SERVICES.				
a) Would the project result in substantial				
adverse physical impacts associated with				
the provision of new or physically altered				
governmental facilities, need for new or physically altered governmental facilities,				
the construction of which could cause				
significant environmental impacts, in order				
to maintain acceptable service ratios,				
response times or other performance				
objectives for any of the public services:				
Fire protection?				
Police protection?			<u> </u>	
Schools?				
Parks?		l 🗀	I ∐ '	

Other public facilities?	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
XVI. RECREATION.				
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?				
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?				
XVII. TRANSPORTATION. Would the project:	V			
a) Conflict with a plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?				
b) Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3 subdivision (b)?				\boxtimes
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?				
d) Result in inadequate emergency access?				
XVIII. TRIBAL CULTURAL RESOURCES. Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geologically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:				N/1
 a) Listed or eligible for listing in the California Register of Historical Resources, 				

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or				
b) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.				
XIX. UTILITIES AND SERVICE SYSTEMS. Would the project:				
a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?				
b) Have sufficient water supplies available to serve the project and reasonable foreseeable future development during normal, dry, and multiple dry years?				
c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?				
d) Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?				
e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?				

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	_
XX WILDFIRE. If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:				
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?				
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?				
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel, breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment.				
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes? XXI. MANDATORY FINDINGS OF				
SIGNIFICANCE.				
a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?				

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?				
c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?				

EXPLANATION OF RESPONSES TO INITIAL STUDY ENVIRONMENTAL CHECKLIST

I. AESTHETICS

- a) The project will not have an adverse effect on a scenic vista. Such an impact will not occur because the project will not involve any construction, land alternation, or modification of any buildings or structures.
- b) The project will not damage scenic resources such as trees, rock outcroppings, and historic buildings. Such an impact will not occur because the project will not involve any construction, land alteration, or modification of any buildings or structures.
- c) The project will not substantially degrade the existing visual character or quality of public views of the site and its surroundings. Such an impact will not occur because the project will not involve any construction, land alternation, or modification of any buildings or structures.
- d) The project will not create a new source of substantial light or glare which would adversely affect day or nighttime views in the area.

II. AGRICULTURE AND FORESTRY RESOURCES

- a) The project will not convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program (FMMP) of the California Resources Agency, to non-agricultural use. Such an impact will not occur because the project will not involve any construction, land alternation, or land use changes.
- b) The project will not conflict with existing zoning for agricultural use or a Williamson Act contract. Such an impact will not occur because the project will not involve any construction, land alternation, or land use changes.
- c) The project will not conflict with existing zoning for, or cause rezoning of, forest land, timberland, or timber zoned Timberland Production. Such an impact will not occur because the project will not involve any construction, land alternation, or land use changes.
- d) There will be no loss of forest land and the project will not result in the conversion of forest land to non-forest use. Such an impact will not occur because the project will not involve any construction, land alternation, or land use changes.
- e) The project will not involve other changes in the existing environment, which due to their location or nature, could result in conversion of Farmland to non-agricultural use. Such an impact will not occur because the project will not involve any construction, land alternation, or land use changes.

III. AIR QUALITY

- a) The project will not conflict with or obstruct implementation of the applicable air quality plan. Such an impact will not occur because the project will not involve any construction, land alternation, or land use changes.
- b) The project will not result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable Federal or State ambient air quality standard. Such an impact will not occur because the project involves no ongoing sources of air pollution.
- c) The project will not expose sensitive receptors to substantial pollutant concentrations. Such an impact will not occur because the project will not increase pollutant concentrations.
- d) The project will not create objectionable odors affecting a substantial number of people.

IV. BIOLOGICAL RESOURCES

a) The project will not have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife (Department), National Marine Fisheries Service (NMFS) or U. S. Fish and Wildlife Service (USFWS).

The project may result in an increase in the daily bag and possession limits for Sacramento River fall-run Chinook Salmon (SRFC) in the American, Feather, Mokelumne and Sacramento rivers. Federally and state listed fish species including Central Valley steelhead, Central Valley spring-run Chinook Salmon, and Sacramento River winter-run Chinook Salmon occur in these waters; however, existing sport fishing regulations for SRFC, including seasonal and area closures, are in place to avoid contact with these species. In addition, all three species are protected from take under the federal and/or state Endangered Species Acts.

The project will increase fishing opportunity on the Feather River by extending the salmon fishing season by two weeks between the Thermalito Afterbay Outfall and the Live Oak boat ramp. Although Central Valley spring-run Chinook Salmon and Central Valley steelhead are native to the Feather River and return to the river annually to spawn, existing sport fishing regulations for SRFC, including seasonal and area closures which will not be changed by this project, are in place to avoid contact with these species. Almost all spring-run and steelhead spawning occurs outside the project area upstream of the Thermalito Afterbay Outlet. Steelhead spawning does not begin until December after the Thermalito Afterbay Outfall to Live Oak boat ramp section closes to fishing. Spring-run Chinook Salmon spawning occurs in September and October, but most of the spawning adults have moved

upstream above the Thermalito Afterbay Outfall before the SRFC fishing season begins in mid-July. As a result, contact with either species during the extended fishing season would be minimal. Furthermore, both species are protected from take under the federal and/or state Endangered Species Acts.

In addition, the project would extend the salmon and hatchery steelhead fishing seasons by two and one-half months and four and one-half months, respectively, between the Highway 99 Bridge and Elliott Road on the Mokelumne River. The expanded fishing opportunity is buffered by the overall large number of hatchery steelhead and salmon returns in the lower Mokelumne River. The project is not expected to have a significant effect on wild steelhead because spawning occurs outside this stretch of river. In addition, take of wild steelhead is prohibited under the federal Endangered Species Act. Spring-run Chinook Salmon were historically in the Mokelumne River but are now extirpated from the watershed. Thus, the project is not anticipated to significantly affect listed fish species in the area.

- b) The project will not have an adverse effect on any riparian habitat or other sensitive natural communities identified in local or regional plans, policies and regulations, or by the California Department of Fish and Wildlife (Department) or the USFWS. Such an impact will not occur because the project will not involve any construction, land alternation, or land use changes.
- c) The project will not have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means. Such an impact will not occur because the project will not involve any construction, land alteration, or land use changes.
- d) The project will not substantially interfere with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites. Such an impact will not occur because the project will not involve any construction, land alteration, or land use changes.
- e) The project will not conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance. Such an impact will not occur because the project will not result in any construction, land alteration, or land use changes.
- f) The project will not conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or State habitat conservation plan. Such an impact will not occur because the project will not involve any construction, land alteration, or land use changes.

V. CULTURAL RESOURCES

- a) The project will not cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5. There is no ground disturbing work or work permanently modifying any existing structure or resource and thus no potential to affect historical resources.
- b) The project will not cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5. There is no ground disturbing work and thus no potential to affect archaeological resources.
- c) The project will not disturb any human remains, including those interred outside of formal cemeteries. There is no ground disturbing work and thus no potential to affect human remains.

VI. ENERGY

- a) The project would not result in a potentially significant environmental impact due to wasteful inefficient, or unnecessary consumption of energy resources, during project construction or operations. Such an impact will not occur because the project will not use energy resources.
- b) The project will not affect nor obstruct any state or local plan for renewable energy or energy efficiency.

VII. GEOLOGY AND SOILS

- a i) The project will not directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area, or based on other substantial evidence of a known fault. Such an impact will not occur because the project will not create any structures for human habitation.
- a ii) The project will not directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving strong seismic ground shaking. Such an impact will not occur because the project will not create any structures for human habitation.
- a iii) The project will not directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving seismic-related ground failure, including liquefaction. Such an impact will not occur because the project will not create any structures for human habitation.
- a iv) The project will not directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving landslides. Such an impact will not occur because the project will not create any structures for human habitation.

- b) The project will not result in substantial soil erosion or the loss of topsoil. Such an impact will not occur because the project will not involve ground disturbing work.
- c) The project will not be located on a geologic unit or soil that is unstable, or that would become unstable and potentially result in on- or off- site landslides, lateral spreading, subsidence, liquefaction, or collapse. Such an impact will not occur because the project will not involve ground disturbing work.
- d) The project will not be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property. Such an impact will not occur because the project will not involve ground disturbing work.
- e) The project will not create any sources of waste water requiring a septic system.

VIII. GREENHOUSE GAS EMISSIONS

a. The project will not generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment. The project will not involve construction, land alternation, or land use changes.

The project could result in additional angler trips to the Feather and Mokelumne rivers during the extended fishing seasons on these rivers. Vehicles that use fuel will be used to access these waters and their internal combustion engines will produce some greenhouse gas (GHG) emissions. However, the number of additional angler trips is anticipated to be low due to the short duration of the extended season on the Feather River and low angling pressure on the Mokelumne River. Therefore, the small amount of GHG emissions resulting from the project would be similar to what occurs today under existing conditions and, thus, would not have a significant impact on the environment.

b. The project will not conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of GHG. The project would result in the production of very low GHG emissions.

IX. HAZARDS AND HAZARDOUS MATERIALS

- a) The project will not create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials. The project will not involve the transport, use, or disposal of hazardous materials.
- b) The project will not create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment. The project will not involve the transport, use, or disposal of hazardous materials.

- c) The project will not emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school. The project will not involve the transport, use, or emission of any hazardous materials.
- d) The project will not be located on any site that is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5.
- e) The project will not be located within an airport land use plan area.
- f) The project will not impair implementation of, or physically interfere with, an adopted emergency response plan or emergency evacuation plan. The project will not involve any construction, land alteration, or land use changes.
- g) The project will not expose people or structures to a significant risk of loss, injury, or death involving wild land fires. The project will not involve any construction, land alteration, or land use changes.

X. HYDROLOGY AND WATER QUALITY

- a) The project will not violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality. The project will not involve any construction, land alteration, water use, or water discharge.
- b) The project will not substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin. The project will not involve any construction, land alteration, or groundwater use.
- c i) The project will not substantially alter the existing drainage pattern of the site or area including through the alteration of the course of a stream or river or through the addition of impervious surfaces in a manner which would result in substantial erosion or siltation on- or off-site because the project will not involve any construction or land alteration.
- c ii) The project will not substantially alter the existing drainage pattern of the site or area including through the alteration of the course of a stream or river or through the addition of impervious surfaces in a manner which would result in flooding on- or off-site because the project will not involve any construction or land alteration.
- c iii) The project will not create or contribute runoff water that would exceed the capacity of existing or planned storm-water drainage systems, or provide substantial additional sources of polluted runoff because the project will not involve any construction or land alteration.

- d) In flood hazard, tsunami, or seiche zones, the project would not risk release of pollutants due to project inundation because the project would not involve any construction or land alteration.
- e) The project would not conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan. The project will not involve any construction, land alteration, or groundwater use.

XI. LAND USE AND PLANNING

- a) The project will not physically divide an established community. The project will not involve any construction, land alteration, or land use changes.
- b) The project will not cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect. The project will not involve any construction, land alteration, or land use changes.

XII. MINERAL RESOURCES

- a) The project will not result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state. Such an impact will not occur because the project will not involve any construction, land alteration, or land use changes.
- b) The project will not result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan. Such an impact will not occur because the project will not involve any construction, land alteration, or land use changes.

XIII. NOISE

- a) The project will not result in generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies. The project will not involve construction or physical alteration of land, and its implementation will not generate noise levels in excess of agency standards.
- b) The project will not result in generation of excessive ground-borne vibration or ground-borne noise levels. The project will not involve construction or physical alteration of land.
- c) The project will not be located within the vicinity of a private airstrip or an airport use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport.

XIV. POPULATION AND HOUSING

- a) The project will not induce substantial unplanned population growth in an area, either directly or indirectly. Such an impact will not occur because the project will not construct any new homes, businesses, roads, or other human infrastructure.
- b) The project will not displace any existing people or housing and will not necessitate the construction of replacement housing elsewhere.

XV. PUBLIC SERVICES

a) The project will not have any significant environmental impacts associated with new or physically altered governmental facilities. The project will not involve any construction, land alteration, or land use changes.

XVI. RECREATION

a) The project will not increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated.

On the Feather River, the project would extend the salmon fishing season between the Thermalito Afterbay Outfall and the Live Oak boat ramp from October 16 to October 31. The project will result in additional angler trips to the project area during this period. Although the salmon and steelhead fisheries are open downstream after the October 15 closure, the project will most likely result in a shift in angler effort upstream into the project area during the last two weeks in October. A shift in angler effort would not be expected to result in the deterioration of existing recreational facilities because the extended fishing season is short and there are adequate facilities in the area to accommodate additional anglers. Most angling occurs from the shore at the Thermalito Afterbay Outfall and in the Oroville Wildlife Area it is a mix of boat and shore anglers. There are several boat launches in the project area, but most of them are unimproved boat launches in the Oroville Wildlife Area. Most boat anglers would use the upstream unimproved boat launch at Thermalito, but may use, in descending order of likelihood, the unimproved boat launches in the Oroville Wildlife Area, the Gridley boat launch, and lastly the Live Oak boat launch.

On the Mokelumne River, the project would extend the salmon fishing season by two and one-half months and the steelhead fishing season by four and one-half months between the Highway 99 Bridge and Elliott Road. In general, there is little shore/bank angling opportunity from Lake Camanche to Lodi. Most angling in the project area is done from floating water craft and access is mostly private in the lower Mokelumne River. There are public parks with river access above and below the project area that have kayak/canoe or small watercraft access. These and similar locations may see an increase in visitors. However, the number of additional visitors/anglers to the area would be minimal as existing angling pressure in the area is very light.

b) The project does not require construction or expansion of recreational facilities.

XVII. TRANSPORTATION

- a) The project will not conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities. The project involves no land use or transportation system modifications.
- b) The project will not conflict or be inconsistent with CEQA Guidelines section 15064.3 subdivision (b), which pertains to vehicle miles traveled. The amount and distance of vehicle miles traveled by recreational anglers should not change substantially under the proposed regulations.
- c) The project will not increase hazards due to a geometric design feature or incompatible uses with equipment. There will be no land use or transportation system modifications.
- d) The project will not result in inadequate emergency access. The project involves no land use or transportation system modifications.

XVIII. TRIBAL CULTURAL RESOURCES

- a) The project will not cause a substantial adverse change in the significance of a tribal cultural resource that is listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k). There is no ground disturbing work and thus no potential to affect tribal cultural resources.
- b) The project will not cause a substantial adverse change in the significance of a tribal cultural resource that is determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code section 5024.1. There is no ground disturbing work and thus no potential to affect tribal cultural resources.

XIX. UTILITIES AND SERVICE SYSTEMS

- a) The project will not require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunication facilities. There will be no construction or land alteration.
- b) The project requires no new water supplies.
- c) The project will not produce wastewater.
- d) The project will not generate solid waste. Thus, the project will be in compliance with State and local standards for solid waste.
- e) The project will not create solid waste. Thus, the project will be in compliance with federal, state, and local management and reduction statutes and regulations related to solid waste.

XX. WILDFIRE

- a) The project will not impair an adopted emergency response plan or emergency evacuation plan.
- b) The project will not exacerbate wildfire risks due to slope, prevailing winds, and other factors.
- c) The project will not require the installation or maintenance of any infrastructure.

XXI. MANDATORY FINDINGS OF SIGNIFICANCE

- a) The project does not have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory. The project is consistent with the Department's mission to manage California's diverse fisheries resources for their ecological value, their use and for the public's enjoyment.
- b) The project does not have adverse impacts that are individually limited, but cumulatively considerable. Cumulative adverse impacts will not occur because there are no potential adverse impacts due to project implementation.

c) The project does not have environmental effects that will cause substantial adverse effects on humans, either directly or indirectly. The project will not involve any construction, land alteration, or the creation of new infrastructure.

STD. 399 Addendum

Amend Subsections (b)(5), (b)(68), (b)(124), and (b)(156.5) of Section 7.50, Title 14, California Code of Regulations Re: Central Valley Salmon Sport Fishing

The regulatory amendments of subsections (b)(5), (b)(68), (b)(124), and (b)(156.5) of Section 7.50 under consideration will set the 2019 sport fishing regulations for Sacramento River Fall-run Chinook Salmon (SRFC) in the American, Feather, Mokelumne, and Sacramento rivers, respectively, for consistency with the Pacific Fishery Mangement Council (PFMC) in-river harvest projections. Collectively, these four rivers constitute the "Central Valley fishery" for SRFC for purposes of this document. Three regulatory options are provided for the Fish and Game Commission consideration.

Option 1 would allow anglers to take any size Chinook Salmon up to the daily bag limit [0-4] and possession limit [0-12] (most liberal option).

Option 2 would allow for take of a limited number of adult Chinook Salmon, with grilse Chinook Salmon making up the remainder of the daily bag limit [0-4] and possession limit [0-12].

Option 3 is the most conservative option and allows for take of only grilse Chinook Salmon up to the daily bag limit [0-4] and possession limit [0-12]. Take of adult salmon would not be allowed.

All three options increase fishing opportunities on the Feather and Mokelumne rivers by: (1) extending the salmon fishing season by two weeks on the Feather River between the Thermalito Afterbay Outfall and the Live Oak boat ramp; and (2) by extending the salmon and hatchery steelhead fishing season on approximately 10 miles of the Mokelumne River between the Highway 99 Bridge and Elliott Road.

A normal season for the Central Valley fishery experiences an average of 179,550 sport salmon angler days in which anglers spend an average of \$75 -109 per day contributing a total of \$13.2M (2017\$) in direct expenditures to California businesses. This expenditure is received by area businesses that spend a share on inputs and payroll. As employees receive income, their household spending again circulates in the local economy and statewide. These multiplier effects result in an estimated total economic impact of \$18.5M (2017\$) and up to 130 jobs.

The regional and statewide economic impacts factor into the effort to balance the maintenance of the recreational fishery with resource preservation, while complying with PFMC recommendations. The potential economic impacts that may result from each in-river harvest projection as specified in Option 1, Option 2, and Option 3 are evaluated in terms of each scenario's probable impact on the number of angler days, and thus area spending.

Table 1. Central Valley Salmon Fishery Economic Impacts (2017\$)

Regulation	Angler Days	Angler Expenditures	Total Econ Impact	Jobs
Option 1	179,550	\$ 13,182,320	\$ 18,536,979	130
Option 2	161,595	\$ 11,864,088	\$ 16,682,731	120
Option 3	143,640	\$ 10,545,856	\$ 14,829,094	110
Difference	Angler Day Loss	Expenditure Loss	Total Impact Loss	Job Loss
Dilicicitoc	Aligici Day Loss	Experiulture 2055	Total Impact Loss	JUD LUSS
Option 1	Aligiei Day Loss	\$ -	\$ -	0
	<u> </u>	- 1,318,232	\$ 1,854,248	0 10

Sources: CDFW Fisheries Branch economic analysis; U.S. Fish and Wildlife Service, 2016 National Survey of Fishing, Hunting, and Wildlife-Associated Recreation; dollar figures adjusted for inflation with Implicit Price Deflator for Personal Consumption Expenditures, Bureau of Economic Analysis.

Historical correlations between catch limits and fishery participation levels suggest that Option 1 could enable a historically average number of angler days for the 2019 Chinook Salmon season on the American, Feather, Mokelumne, and Sacramento rivers. Option 2 may result in declines in angler days of 17,955 below an average year. Option 3 may result in larger declines or about 35,910 fewer angler days.

For all options, the proposed extensions of season end dates for portions of the Feather and Mokelumne Rivers would extend the period of angler regional economic contributions. Additionally, anglers may pursue other in-river sport fish aside from Chinook salmon, such as steelhead (*Oncorhynchus mykiss*), striped bass (*Morone saxatilis*), largemouth bass (*Micropterus salmoides*), sturgeon (*Acipenser transmontanus*) and catfish (*Ictalurus spp.*), that may mitigate any adverse impacts from any reductions in salmon fishing. In sum, the options were conceived with the goal of enabling levels of recreational SRFC fishing in the range of historical averages, and thus should not be a source of significant adverse economic impacts.

Section A

Question 4. Number of businesses that will be created or eliminated.

The Commission does not anticipate that any of the proposed options would induce substantial impacts on the creation of new business or the elimination of existing businesses, because the proposed changes to the regulations are unlikely to be substantial enough to stimulate the creation of new businesses or cause the elimination of existing businesses. The season extensions for portions of the Mokelumne and Feather rivers are expected to help sustain the number of fishing trips and the level of economic stimulus within historical averages.

Section A

Question 6. Number of jobs creatd an eliminated.

The Commission does not anticipate that any of the proposed options would induce substantial impacts on the creation or elimination of jobs. For the Option 1, no change in job creation or elimination is anticipated. Option 2 and Option 3 have the potential to result in fewer angler visits, and absent substitution toward other sportfish and/or activities in the affected areas, the reduction in angler spending could reduce the support for 10 - 20 jobs statewide. These job impacts are statewide and may be

moderated by the additional two and one-half months of fishing opportunity on approximately 10 miles of the Mokelumne River between the Highway 99 bridge and Elliott Road, and by the additional two weeks of fishing opportunity on the Feather River between the Thermalito Afterbay Outfall and the Live Oak boat ramp.

Section B

Question 1. What are the total statewide dollar costs that busineses and individuals may incur to comply with this regulation over its lifetime? \$0 The regulations under consideration seek to maintain Central Valley fall-run Chinook Salmon fishing opportunites with no new compliance costs. The proposed bag and possession limits, river areas and season lengths do not prescribe any particular equipment or methods.

Section C

Question 1. Briefly summarize the benefits of the regulation.

Under all options, the Commission anticipates benefits to the health and welfare of California residents. Chinook Salmon is a nutritious food source and providing inland sport fishery opportunities encourages consumption of this nutritious food. Sport fishing also contributes to increased mental health of its practitioners, as fishing is a hobby and form of relaxation for many. Sport fishing also provides opportunities for multi-generational family activities and promotes respect for California's environment by younger generations, the future stewards of California's natural resources.

Under all options, the Commission does not anticipate any benefits to worker safety from the proposed regulations because inland sport fishing does not impact working conditions.

Under all options, the Commission anticipates benefits to the environment in the sustainable management of Central Valley Chinook Salmon. It is the policy of this State to encourage the conservation, maintenance, and utilization of the living resources of the ocean and other waters under the jurisdiction and influence of the State for the benefit of all the citizens of the State and to promote the development of local fisheries and distant water fisheries based in California in harmony with international law, respecting fishing and the conservation of the living resources of the ocean and other waters under the jurisdiction and influence of the State. The objectives of this policy include, but are not limited to, the maintenance of sufficient populations of all species of aquatic organisms to ensure their continued existence, and the maintenance of a sufficient resource to support a reasonable sport use.

In accordance with this policy, adoption of scientifically-based inland Chinook Salmon regulations provides for the maintenance of sufficient populations of salmon to ensure their continued existence and thus continued economic stimulus.

Under all options, other benefits include consistency with federal fishery management goals and the promotion of businesses that rely on Central Valley sport fishing.

Section C

Question 3. What are the total statewide benefits from this regulation over its lifetime? \$14.8 - 18.5 M in total impact annually. This is the average historical range of total economic impact of the fishery with multipliers for indirect and induced impacts applied to the direct impact. This action is expected to sustain fishery activity within the range of historically normal seasons. Given that the 2018 regulations resulted in a typical season, the potential difference between 2018 conditions and the options under consideration range from \$1.8 - \$3.7 M as shown in Table 1, above.

Section C

Question 4. Briefly describe any expansion of businesses currently doing business within the State of California that would result from this regulation.

The Commission does not anticipate that any of the proposed options would induce substantial impacts on the expansion of businesses currently doing business within the state. The proposed regulations are not anticipated to increase demand for services or products from the existing businesses that serve inland sport fishermen. The number of fishing trips and angler economic contributions are expected to remain within the range of historical averages.

Section D Question 1. Alternatives to the Regulation

The "Regulation" is specified in the Initial Statement of Reasons (ISOR) as **Option**1 which would allow anglers to take any size Chinook Salmon up to the daily bag limit [0-4] and possession limit [0-12] (most liberal option).

Alternative 1 is specified in the ISOR as **Option 2** which would allow for take of a limited number of adult Chinook Salmon, with grilse Chinook Salmon making up the remainder of the daily bag limit [0-4] and possession limit [0-12].

Alternative 2 is specified in the ISOR as **Option 3** which is the most conservative option and allows for take of only grilse Chinook Salmon up to the daily bag limit [0-4] and possession limit [0-12]. Take of adult salmon would not be allowed.

All three options increase fishing opportunities on the Feather and Mokelumne rivers by: (1) extending the salmon fishing season by two weeks on the Feather River between the Thermalito Afterbay Outfall and the Live Oak boat ramp; and (2) by extending the salmon and hatchery steelhead fishing season on approximately 10 miles of the Mokelumne River between the Highway 99 Bridge and Elliott Road.

FISHERIES, FISHING (COMMERCIAL), FISHING (SPORT), MARINE, REGULATIONS, SALMON

'Slightly Improved' Forecast for California's 2019 Ocean Salmon Season

MARCH 1, 2019 | KMACINTY

California's 2019 ocean salmon fishing season should be slightly better than last year's, according to information presented at this week's annual Salmon Information Meeting held in Santa Rosa by the California Department of Fish and Wildlife (CDFW). The ocean abundance projections for Sacramento River fall Chinook (SRFC), a main salmon stock harvested in California waters, is estimated at 379,600 adult salmon, an increase over 2018 forecasts. This may result in increased fishing opportunity in some central coastal areas. The Klamath River fall Chinook (KRFC) abundance forecast of 274,200 adult salmon is lower than 2018 forecast, but still an improvement over low forecast numbers seen in recent years.

"We are cautiously optimistic that the increase in ocean abundance of SRFC will translate into more fishing opportunity this year," said CDFW Environmental Scientist Kandice Morgenstern.

Recreational anglers and commercial salmon trollers at the meeting provided comments and voiced concerns to a panel of fishery managers, scientists and industry representatives. Stakeholder input will be taken into consideration when developing three season alternatives during the March 6-12 Pacific Fishery Management Council (PFMC) meeting in Vancouver, Wash. Final ocean salmon seasons will be adopted during the April 9-16 PFMC meeting in Rohnert Park.

The PFMC may take a conservative approach when crafting 2019 ocean salmon seasons since both SRFC and KRFC stocks are considered to be overfished under the terms of the federal Salmon Fishery Management Plan due to three years of low spawning escapement. Additionally, persistent concerns over protected Sacramento River winter Chinook and California Coastal Chinook could limit fishing opportunity south of Point Arena and north of Point Sur, respectively.

For more information on the salmon season setting process or general ocean salmon fishing information, please visit the Ocean Salmon Project website

(http://www.wildlife.ca.gov/fishing/ocean/%20regulations/salmon) or call the ocean salmon hotline at (707) 576-3429.

▼ FISHING **▼** OCEAN **▼** REGULATIONS **▼** SALMON **▼** SALMON FISHERIES

From: Mike Brown

Sent: Tuesday, April 16, 2019 8:38 AM

To: FGC

Subject: Comment for rule making 4/17 #18 Central Valley Salmon

FGC,

The proposed regulation to allow the take of grilse after the retention of an allowable adult Chinook Salmon is a determent to the fishery. Grisle size criteria is not a constant and changes year to year based on ocean conditions and growth rates. In some years the impact to adult salmon would be greater than predicted based on the bag analysis due to the smaller size of adults, other years when adult salmon are larger it would result in limited fishing opportunity. This unpredictability would make it tough for fishery experts to manage the fishery and would likely have to act conservatory, limiting fishing opportunities when setting quotas. Another concern is the incidental take of adult salmon after the adult salmon bag had been reached. Between 4-35% of the returning run is grilse, which would mean an angler would on average have to catch 3 salmon, two of which would be adults to reach the grilse bag. This example is the best case with grilse rates high at 35%, the lower the grilse rate would mean the greater incidental contact of adults. This incidental contact brings about hook and line mortality limiting the amount of salmon to return the hatcheries or native spawning areas. In the ocean hook mortality is as high as 50%. One other concern is enforcement, with a size limit on salmon would mean that wardens would need to board boats to measure fish. I have the most respect for wardens but it presents a safety issue and opens up the possibility for damage to the boats.

I strongly appose options 2 and 3, please keep the regulations as they have in the past.

Sincerely

Mike

Subject: FGC follow up on Central Valley salmon season

Ari, Kevin,

At the Santa Monica FGC meeting, the Guides proposed a 2/1 bag limit for Central Valley salmon season. CDFW has currently acknowledged that they would like to see 2 adults, we would also like the inclusion of a jack salmon. As I explained in our public comments, we are ok with parity with the Klamath season (3 total, with two adults and one jack) or a "bonus fish" situation (2 adults, and a jack if you catch it before you catch your two adults) which would minimize hooking and releasing additional adults in the quest for a jack.

Would like to work with you on this advance of the May 16th teleconference so that everyone can be on the same page with the same request.

Thank you, Mark

California Fish and Game Commission 1416 Ninth Street, Suite 1320 Sacramento, CA 95814

April 30, 2019

RE: Central Valley and Klamath River Basin Salmon Regulations

Dear President Sklar, Vice President Hostler-Carmesin, and members of the Fish and Game Commission,

Thank you for the opportunity at the April Fish and Game Commission meeting in Santa Monica to discuss the proposed 2019 inland river recreational fishing seasons. As mentioned by our organizations' representatives in public comment at the hearing, we are appreciative of the opportunity that the Commission has afforded us with the extra time between the end of the PFMC and the April Commission meeting by scheduling a tele-conference to adopt the inland regulations. We are hopeful that you will find this process valuable on your end as well.

We ask for one change to the proposed Klamath River Basin 2019 season presented by the Department of Fish and Wildlife at the April meeting. The change errs on the side of conservation and insures a longer season for a fishery managed under a quota. We also take this opportunity to remind the Commission of the need to consider a longer overall length for two-year-old ("jack") salmon in the Klamath River Basin.

Central Valley ISOR

We again wish to acknowledge and thank you for working with our affected communities to introduce additional flexibility and, in part, extended seasons for the Central Valley recreational fishery.

As you know, the salmon bag limit was reduced to one per angler per day in the 2018 season. This year, the Department's April proposal is 2 salmon any size per angler per day for the 2019 season. We are appreciative and enthusiastic about the opportunity to restore this fishery and ask that you approve this proposal.

Klamath River Basin ISOR

Relative to the Klamath River Basin, we ask that the Commission adopt a daily bag limit of two fish, of which no more than one may exceed the jack cutoff length. This is a slightly more conservative bag limit than suggested by the Department at the April Commission meeting and falls within the range set forth in the Initial Statement of Reasons.

Unlike the Central Valley, the Klamath season is restricted in its total take. This year the PFMC and the Department are recommending roughly 7600-7800 fish for the recreational in-river harvest. Our organizations propose that we would like the take of those fish to be slowed and extended over a longer period of time. We are therefore asking for a 1 adult 1 jack per day limit. We would prefer a longer fishery instead of a more intense shorter duration season. This benefits not just river guides (who will be on the river longer), but the RV parks, the local restaurants, hotels, and more. More people over a longer period of

time boosts our local economies. It also helps extend opportunity to more anglers. Not everyone can get up to the Klamath right at the beginning of the season. This proposal would leave more adult fish in the river over a longer period of time for those anglers who want or must come up mid or later season. We did not make this public comment at the April meeting but feel like it is a sensible option that the Commission has discretion to enact.

We note with regret that the Department failed to amend the ISOR to include a jack cutoff length representative of the typical length of a two-year-old Klamath Chinook. In a written request last December, we asked for consistency in the Department's treatment of jack cutoff lengths. We noted the scientific basis and calculation that the Department set forth in the Central Valley ISOR and urged that the same sound process be used in the Klamath River Basin.

The jack salmon length determination in the Central Valley ISOR relied upon historical adult-jack cutoff lengths (measured in fork length) to arrive at a total length calculation. Using the identical methodology applied to the identical years for the Klamath fall Chinook, the mean fork length adult-jack cutoff was 58.75 cm, or 23" fork length. Using the same conversion factor from fork length to overall length as in the Central Valley ISOR, the mean cutoff is 24" overall length. Therefore, the Klamath River Basin ISOR should have included not only a 22" cutoff length, but a 24" cutoff length as well, establishing a range analogous to the range proposed in the Central Valley ISOR.

The Department responds to this request for analytical consistency with reference to 1998, when the cutoff length was 24" and a post-season analysis revealed adult harvest in excess of the quota. The Department's response does not reference any other data or provide any analysis or justification for the 22" cutoff length. Respectfully, the Department should consider a more comprehensive data set. The analysis should account for the latest status and trend data. One twenty-one-year-old data point is not as relevant as the picture painted by more recent data.

Moreover, while we sought to have the cutoff length range broadened in the ISOR – and used the Department's own method of analysis to justify the request – at that time we did not insist that a cutoff length of 24" be enshrined in the final regulations. On the other hand, the Department now seeks to impose a 22" jack cutoff length with no apparent analysis. If there is an analysis that supports a 22" total length as opposed to, for example, a 23" total length, then the Commission and the public are entitled to consider it.

While it is too late to consider a 23" or 24" total length jack cutoff for 2019, we ask that the Commission more fully consider this issue in 2020 and beyond.

Thank you for the opportunity to address these ISOR items and for engaging in dialogue with us over the past several months and at Commission meetings. We urge you to adopt these proposals when setting the 2019 inland regulations on the May 16th Commission tele-conference call.

Sincerely,

James Stone President, Northern California Guides and Sportsmen's President, Coastside Fishing Club Association

Subject: Submission of Pre-Adoption Statement of Reasons to Amend Subsections (b)(5), (b)(68), (b)(124), and (b)(156.5) of Section 7.50, Title 14, CCR, RE: Central Valley Salmon Sport Fishing Regulations

Attached is the Pre-Adoption Statement of Reasons (PSOR) for the 2019 Central Valley Salmon sport fishing regulations. The PSOR includes responses to comments from the public on the proposed regulation changes. No changes were made to the original proposed regulations. However, the Pacific Fishery Management Council (PFMC) has reviewed west coast salmon stocks and has projected the in-river recreational harvest impact to be 28,263 adult Sacramento River fall-run Chinook Salmon for the 2019-2020 season. Regulatory options 1-3 in the Initial Statement of Reasons (ISOR) encompassed varying ranges of recreational bag and possession limits based on PFMC's allocation. To target PFMC's projection, the Department of Fish and Wildlife (Department) is recommending Option 1 in the ISOR, which allows for take of any size Chinook Salmon within the specified bag limit of two fish and possession limit of four fish for the American River, Feather River, Sacramento River, and Mokelumne River. The Department is not recommending Option 2 (limited adult, and grilse fishery – jacks or jills) or Option 3 (grilse-only fishery). The Commission will adopt specific bag and possession limits for Chinook Salmon in the Central Valley during the Commission teleconference on May 16, 2019.

If you have any questions or need additional information, please contact Kevin Shaffer, Chief, Fisheries Branch, at (916) 327-8841 or by e-mail at Kevin.Shaffer@wildlife.ca.gov.

STATE OF CALIFORNIA FISH AND GAME COMMISSION STATEMENT OF REASONS FOR REGULATORY ACTION (Pre-adoption Statement of Reasons)

Amend Subsections (b)(5), (b)(68), (b)(124), and (b)(156.5) of Section 7.50
Title 14, California Code of Regulations
Re: Central Valley Salmon Sport Fishing

I. Date of Initial Statement of Reasons: November 20, 2018

II. Date of Pre-adoption Statement of Reasons: May 6, 2019

III. Dates and Locations of Scheduled Hearings:

(a) Notice Hearing: Date: December 13, 2018

Location: Oceanside

(b) Discussion Hearing: Date: February 6, 2019

Location: Sacramento

(c) Discussion Hearing: Date: April 17, 2019

Location: Santa Monica

(d) Adoption Hearing: Date: May 16, 2019

Location: Teleconference

IV. Description of Modification of Originally Proposed Language of Initial Statement of Reasons:

No changes have been made to the originally proposed regulatory language.

V. Reasons for Modification of Originally Proposed Language of Initial Statement of Reasons:

No changes have been made to the originally proposed regulatory language. However, the Pacific Fishery Management Council (PFMC) has reviewed west coast salmon stocks and has projected the in-river recreational harvest impact to be 28,263 adult Sacramento River fall-run Chinook-Salmon for the 2019-2020 season. Regulatory options 1-3 in the Initial Statement of Reasons (ISOR) encompassed varying ranges of recreational bag and possession limits based on PFMC's allocation. To target PFMC's projection, the Department of Fish and Wildlife (Department) is recommending Option 1 in the ISOR, which allows for take of any size Chinook Salmon within the specified bag limit of two fish and possession limit of four fish. The Department is not recommending

Option 2 (limited adult, and grilse fishery – jacks or jills) or Option 3 (grilse-only fishery). Thus, the Department recommends a daily bag limit of two fish, and a possession limit of four fish of any size for the American River, Feather River, Sacramento River, and Mokelumne River. Because of a more favorable salmon abundance forecast, the Department's judgement is that the in-river recreational fishery can support a higher harvest rate than in 2018 and still achieve PFMC's minimum escapement goal of 160,159 hatchery and natural-area adult spawners. The Commission will adopt specific bag and possession limits for Chinook Salmon in the Central Valley during the Commission teleconference on May 16, 2019.

VI. Summary of Primary Considerations Raised in Opposition and in Support:

<u>Comment by James Stone</u>, President of the NorCal Guides and Sportsmen's Association, received at the February 6, 2019 Commission meeting: Mr. Stone supports the inclusion of options for a jack fishery in the ISOR.

<u>Comment by George Osborn</u>, received at the February 6, 2019 Commission meeting: Mr. Osborn supports the inclusion of options for a jack fishery in the ISOR.

Response: The Department is recommending Option 1 in the ISOR which allows for harvest of salmon of any size and is proposing a two-fish daily bag limit and a four-fish possession limit. The Department is not recommending Option 2 or Option 3, both of which would allow for a jack fishery. The Department's intent was to recommend Option 2 or Option 3 only if adult salmon return estimates were similar to 2018 and the Department had to again constrain in-river harvest of adults. The NorCal Guides and Sportsmen's Association, whom Mr. Stone represents, was in support of this approach. In a letter dated December 11, 2018, Mr. Stone, President of the NorCal Guides and Sportsmen's Association, states that he supports the option for a jack salmon fishery in the Central Valley "...should the forecast escapement number not allow retention of two adults."

Although fishery returns are modestly better, we are still in the fall-run Chinook Salmon stock rebuilding phase and allowing a jack fishery could result in higher than expected harvest of adults relative to overall escapement. The Department would like to eventually give anglers access to jacks and will consider a jack fishery in the future when salmon abundance is higher.

<u>Comment by Jeanne Wallen</u>, email dated March 25, 2019: Ms. Wallen asks that the Commission keep the Chinook Salmon bag limit in the Central Valley at one fish to let the salmon run fully recover to get a more accurate sense of the real number of fish returns.

Response: For the 2019 recreational salmon fishery in the Central Valley, the Department is recommending a two-fish daily bag limit and a four-fish possession limit (Option 1 in the ISOR). Based on PFMC's stock abundance forecast, there is no need to limit in-river harvest of adult Chinook Salmon to a one-fish daily bag limit and a two-

fish possession limit for the 2019 fishing season. The Department's judgement is that the in-river recreational fishery can support a higher harvest rate than in 2018 and still achieve PFMC's minimum escapement goal of 160,159 hatchery and natural-area adult spawners.

Comment by Mike Brown, email dated April 16, 2019. Mr. Brown states three concerns:

- He opposes Option 2 and Option 3 in the ISOR. He states the proposed regulation to allow the take of grilse after the retention of an allowable adult Chinook Salmon is a detriment to the fishery. Grilse size criteria is not constant, and changes year to year based on ocean conditions and growth rates, so the unpredictability of adult and grilse size for a bag limit could make it difficult to manage the fishery and set quotas.
- Mr. Brown is concerned about potential incidental take of adult salmon after the adult salmon bag had been reached. He states that between 4-35% of the returning run is grilse, which would mean an angler would on average have to catch three salmon, two of which would be adults to reach the grilse bag. He states that this example is the best case with grilse rates high at 35%, the lower the grilse rate would mean the greater incidental contact of adults. Mr. Brown states that this incidental contact brings about hook and line mortality limiting the amount of salmon to return to the hatcheries or native spawning areas, and that in the ocean hook mortality is as high as 50%.
- Mr. Brown is also concerned about enforcement and states that a size limit on salmon would mean that wardens would need to board boats to measure fish, which may present a safety issue, and open up the possibility for damage to boats.

Response: The Department is recommending Option 1 in the ISOR, which allows for harvest of salmon of any size. The Department is not recommending Option 2 or Option 3, both of which would allow for a grilse/jack fishery. The Department's intent was to recommend Option 2 or Option 3 only if adult salmon return estimates were similar to 2018 and the Department had to again constrain in-river harvest of adults. PFMC is predicting a higher return of adult spawners to the Sacramento River system than last year. As a result, the Department's judgement is that the in-river recreational fishery can support a higher harvest rate than in 2018 and still achieve PFMC's minimum escapement goal of 160,159 hatchery and natural-area adult spawners.

If the Commission adopts Option 2 or Option 3 in the ISOR, the Department would recommend that fishing cease once the adult daily bag limit has been reached. As fishing would have to cease once the adult daily bag limit has been reached, even if a jack has not been retained, this would prevent the incidental take of adult salmon after the adult daily bag limit had been reached.

The Department states that there is not a safety issue with law enforcement officers boarding boats, nor is there a risk of damage to boats.

Comment by Mark Smith, representing the American Sportfishing Association and NorCal Guides and Sportsmen's Association, received at the April 17, 2019 Commission meeting and email received April 22, 2019. The guides proposed a two adult, and also a one jack bag limit for Central Valley salmon season. Mr. Smith states he seeks parity with the Klamath season (3 total, with two adults and one jack) or a "bonus fish" situation (2 adults, and a jack if caught before two adults), which would minimize hooking and releasing additional adults in the quest for a jack.

Response: The Department is recommending Option 1 in the ISOR which allows for harvest of salmon of any size and is proposing a two-fish daily bag limit and a four-fish possession limit. The Department is not recommending Option 2 or Option 3, both of which would allow for a jack fishery. The Department's intent was to recommend Option 2 or Option 3 only if adult salmon return estimates were similar to 2018 and the Department had to again constrain in-river harvest of adults. The NorCal Guides and Sportsmen's Association, whom Mr. Smith represents, was in support of this approach. In a letter dated December 11, 2018, Mr. Stone, President of the NorCal Guides and Sportsmen's Association, states that he supports the option for a jack salmon fishery in the Central Valley "...should the forecast escapement number not allow retention of two adults."

Although fishery returns are modestly better, we are still in the fall-run Chinook Salmon stock rebuilding phase and allowing a jack fishery could result in higher than expected harvest of adults relative to overall escapement. The Department would like to eventually give anglers access to jacks and will consider a jack fishery in the future when salmon abundance is higher.
