

## SANTA MONICA ARTIFICIAL REEF

|                           |                                                                                                                                                                                                |                            |
|---------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------|
| <b>Center Coordinates</b> | 34° 00' 34" N x 118° 31' 47" W                                                                                                                                                                 | <b>Depth</b> 60 ft. (MLLW) |
| <b>Compass Bearing</b>    | 295° (mag), 4.5 N miles from Marina Del Rey entrance                                                                                                                                           |                            |
| <b>Year Constructed</b>   | 1961 (Augumented 1971)                                                                                                                                                                         | <b>Area</b> 0.5 acres      |
| <b>Materials Used</b>     | 330 tons quarry rock, 44 concrete shelters, 4 car bodies, 1 streetcar.                                                                                                                         |                            |
| <b>Comments</b>           | An original "replication reef". Automobiles and streetcar have disintegrated. Augmented with 100 tons of pier pilings in 1971. Some sandbass in fall. Occasional good sculpin bites in spring. |                            |

# SANTA MONICA ARTIFICIAL REEF

Although car bodies were inexpensive, their usefulness was limited to only a few years.
