¹ The Natural River Management Plan SAA authorized up to 74 acres of impacts in the Santa Clara River that would occur over time as different sub-projects under the NRMP were constructed. The NRMP also included mitigation ratios of at least 1:1 for wetlands and the preservation of more than 1,200 acres under conservation easement. Precise impact and mitigation numbers are determined as each NRMP sub-project is constructed. For this reason, acreages for the NRMP have not been included in the figures in Section 6.0.
