DATE: December 23, 2016

SUBJECT: RECOMMENDATION ON OPENING OF DUNGENESS CRAB FISHERY
IN STATE WATERS BETWEEN 38° 57.5' N LATITUDE AND 39° 33.3' N
LATITUDE

The Office of Environmental Health Hazard Assessment (OEHHA) has determined, in consultation with the California Department of Public Health (CDPH), that consumption of Dungeness Crab taken from state waters in Mendocino County north of 38° 57.5' N Latitude (near Point Arena) to 39° 33.3' N (near Ten Mile River) no longer poses a significant threat for domoic acid exposure. This determination is based on data from repeated sampling of Dungeness Crab and analysis of these samples by CDPH laboratories. OEHHA is therefore recommending the opening of this portion of the Dungeness crab fishery.

The commercial Dungeness Crab fishery between Ten Mile River and Shelter Cove in Humboldt County (specifically north of 39° 33.3' N Latitude and south of 40° 01' N Latitude) should remain closed. This would be the only area of the commercial Dungeness Crab fishery that would remain closed in California.

Domoic acid poisoning in humans may occur within minutes to hours after consumption of affected seafood and can result in signs and symptoms ranging from vomiting and diarrhea to permanent loss of short-term memory (Amnesic Shellfish Poisoning), coma, or death.

Current federal action levels for domoic acid are 20 parts per million (ppm) for all fish, with the exception of 30 ppm in the viscera of Dungeness crabs. State and federal laws prohibit the commercial distribution of seafood products that contain domoic acid levels

above the action level. In contrast to levels seen earlier, concentrations of domoic acid in recent viscera samples of Dungeness Crab from 38° 57.5' N Latitude to 39° 33.3' N Latitude did not test above the action level of 30 ppm. As such, OEHHA recommends the opening of the commercial Dungeness Crab fishery in these areas in a manner consistent with the emergency regulations adopted on November 15, 2016. The sampling results for Dungeness Crab caught in state waters from Point Reyes to the Oregon border are provided in the table on pages 3 and 4.

While CDPH and OEHHA concur that Dungeness Crab taken from this area are safe to consume, CDPH and OEHHA recommend as a best-preparation practice that consumers should avoid eating the viscera (internal organs, also known as "butter" or "guts") of crabs, as the viscera usually contain much higher levels of domoic acid than the meat.

CDFW, CDPH, and OEHHA are continuing to monitor and analyze Dungeness Crab to determine when the crab fisheries between Ten Mile River and Shelter Cove can be opened safely.

If you have questions, please contact me at Lauren.Zeise@oehha.ca.gov or (916) 322-6325.

Dungeness Crab Sampling Results

PORT	AREA	SAMPLE COLLECTION DATE	NUMBER OF SAMPLES	VISCERA SAMPLE RESULTS: RANGE	AVERAGE LEVEL IN VISCERA	SAMPLES EXCEEDING ACTION LEVEL (30 ppm in viscera)
Crescent City	North	9/14/16	6	6.7-53 ppm	19 ppm	17%
	South	11/1/16	6	<2.5-8.8 ppm	5 ppm	0%
	North	11/1/16	6	<2.5-14 ppm	7 ppm	0%
