

2017

The Value of Dispersant Use for Offshore Oil Spill Response

Energy lives here™

Dr. Tom Coolbaugh
Exxon Mobil Corporation
Spring, Texas

Topics of Discussion

- Oil spill response options
- Background on dispersants
- Subsea dispersants
- Observations on their use
- Other research activities

Spill Response Options: The Toolbox

Monitor & Evaluate

Mechanical Recovery

In-Situ Burning

Aerial

**Dispersants
Vessel**

Subsea

*The goal is to design a response strategy based on
Net Environmental Benefit Analysis (NEBA)*

Encounter Rate is Key to Offshore Response

Oil Slicks Spread Quickly

- A slick continuously expands and oil thins
 - The size of the problem will increase with time
- Response options get less efficient with time
 - The goal is to respond as quickly and as close to the source as possible

Relative Area Coverage

- 5,000 MT spill (37K bbl)
- Slick 0.1 mm thick
- 100 MT/km²
- 8 hrs of operation
- Continuous encounter with slick

For reference:

9300 American Football fields

6500 Football (soccer) fields

2900 Australian rules Football fields

Optimum Response Strategy

- Use appropriate combination of response tools to minimize impacts
 - If possible, deploy mechanical in thick oil to maximize recovery
 - Consider dispersant use early in a response
 - Responder and public safety is critical
- Environmental protection priorities
 - Minimize wildlife exposure
 - Minimize habitat contamination
 - Minimize oil stranding on sensitive shorelines
- Human resource protection priorities
 - Tourist beaches
 - Marinas, commercial activities
 - Shoreline property values

Net Environmental Benefit Analysis (NEBA) / Spill Impact Mitigation Assessment (SIMA)

- Risk comparison process to improve decision-making
- A planning and response tool
 - Rank response options by least negative environmental consequences and effectiveness in treating/removing spilled oil
 - Speed the selection of response options for various locations, weather conditions and spill circumstances
- Can be an intensive and detailed process to arrive at a consensus with respect to the response decision
 - Have the discussions in advance of a spill

Dispersants Enhance Removal of Oil

Through Biodegradation

NEBA/SIMA Considerations Regarding Dispersants

- Oil on the Surface May Affect Birds and Habitats
- Oil in Water May Affect Marine Life

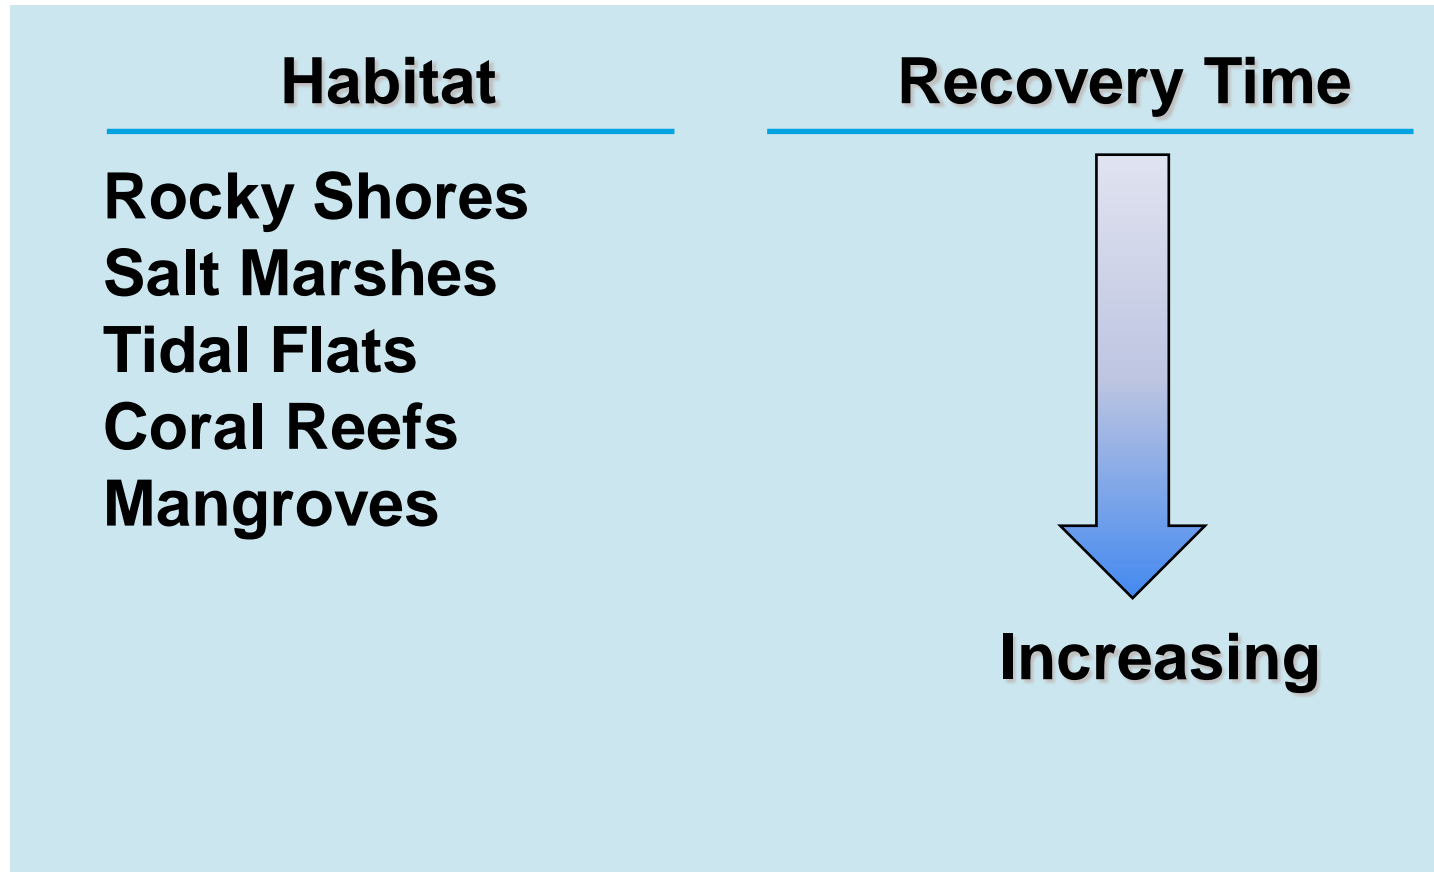

- Oil in Marshes May Affect Marsh Grass
- Oil in Water May Affect Sea Grass

- Oil on Beaches May Affect Turtle Eggs
- Oil in Water May Affect the Turtles

- Oil on the Surface May Affect Mangroves
- Oil in Water May Affect Coral

Dispersant use may provide the most acceptable result

Shoreline Recovery Time May Differ by Type

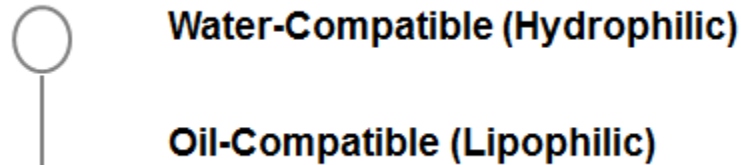

Dispersant Use Strategy

- Dispersants Are One Component of an Overall Response
- Environmental Protection Priorities
 - Minimize wildlife exposure
 - Minimize habitat contamination
 - Minimize oil stranding on sensitive shorelines

Dispersants – What are they?

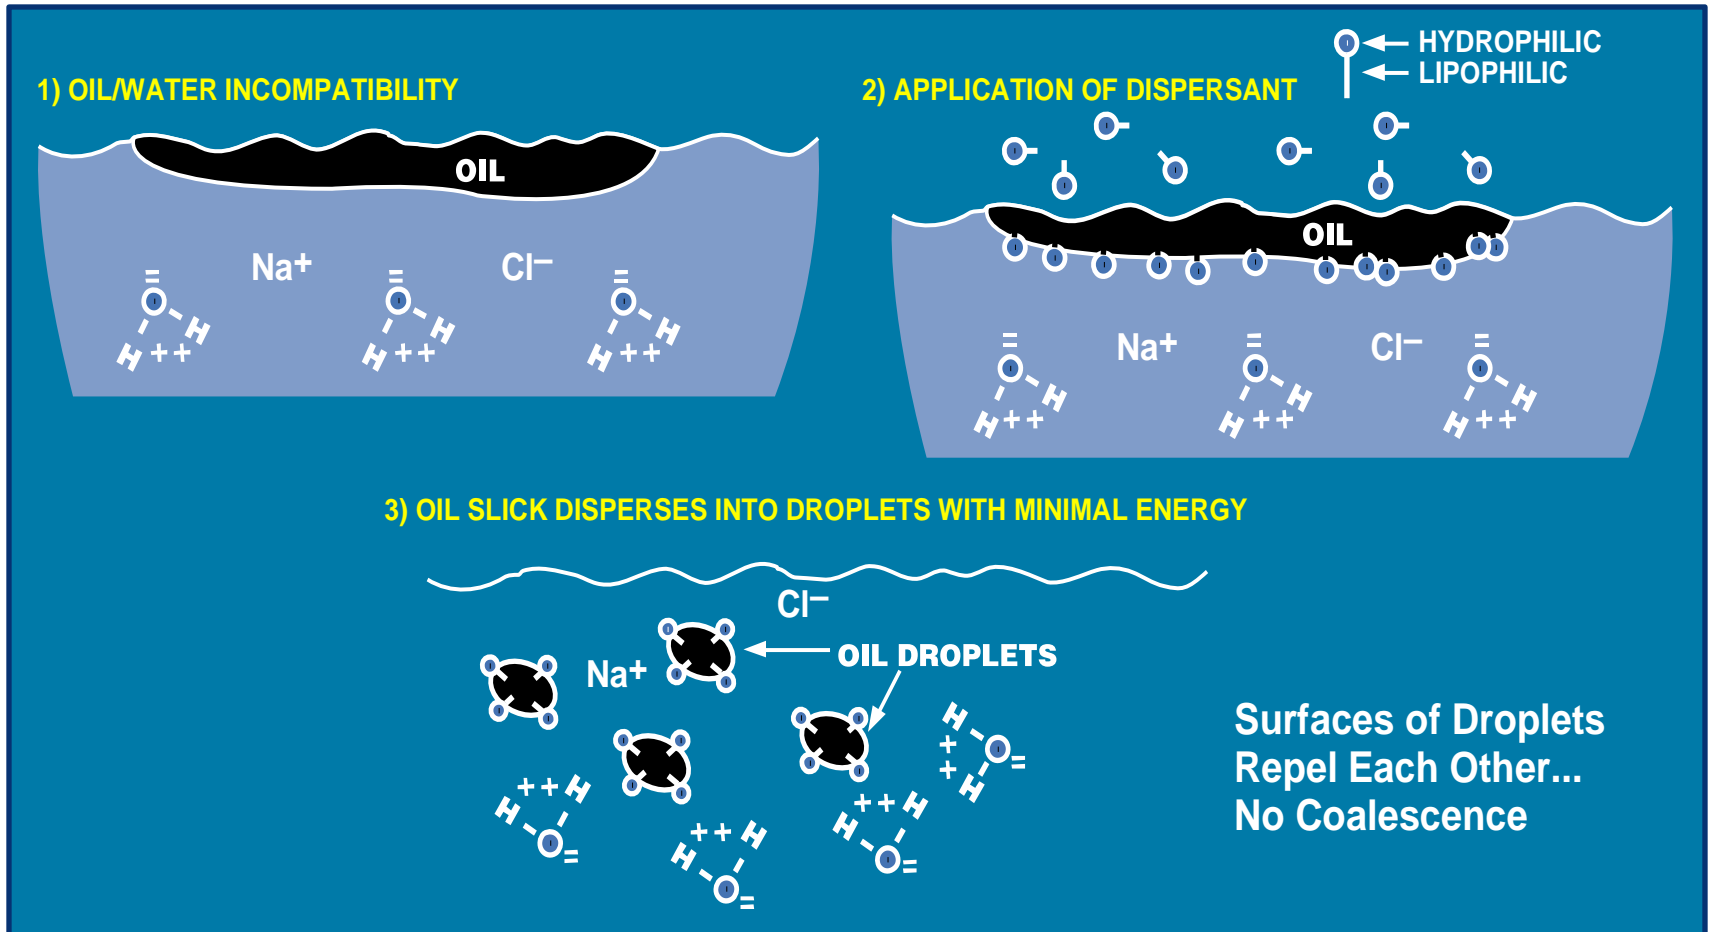

- Dispersants are solutions of surfactants dissolved in a solvent
- Surfactants reduce oil-water interfacial tension – allows slicks to disperse into very small droplets with minimal wave energy

- Dispersed oil rapidly dilutes to concentrations <10 ppm within minutes, <1 ppm within hours, ppb range within a day
- Each dispersed oil droplet is a concentrated food source that is rapidly colonized and degraded by marine bacteria
- Dilution allows biodegradation to occur without nutrient or oxygen limits

How Dispersants Work

The Goal: Reduce Oil Concentration to Below Impact Levels Rapidly

Factors Influencing Effectiveness

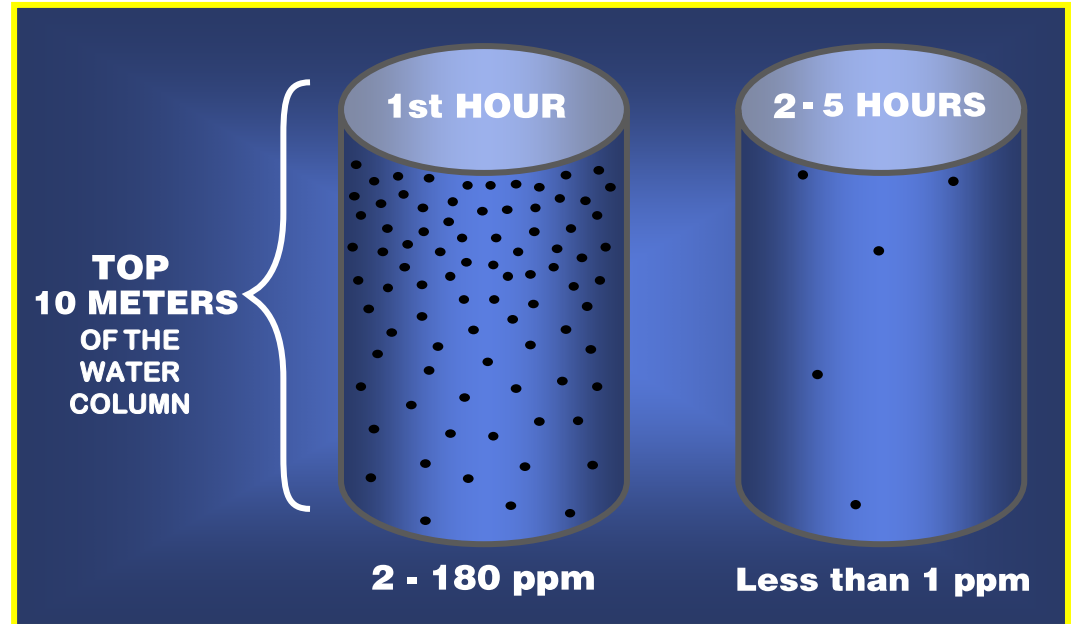

- Oil Type/Properties
 - Viscosity
 - API Gravity
 - Wax Content/Pour Point
 - Emulsifiers
- Environmental Conditions
 - Water Temperature
 - Sea State (Mixing Energy)
 - Extent of Weathering (How Long on the Sea)
 - Water Salinity

Environmental Impacts

- Toxicity

- Rapid dilution limits ecosystem impacts of both dispersant and dispersed oil
- Concentrations start low and rapidly dilute (National Academy of Sciences, 1989)

Lessard, R.R. and DeMarco, G. (2000) The significance of oil spill dispersants. *Spill Science & Technology Bulletin*, 6, 59-68

- Lab tests expose organisms to constant concentrations for days
- Organisms only see elevated concentrations for hours during a spill
- Dispersants are only applied in areas with high potential for dilution

Human Health

- Modern dispersants use ingredients found in household products
 - NALCO website*
 - Centers for Disease Control assessment supports low health risk
- Following proper application procedures and wearing appropriate equipment is important
- NOAA & FDA test results for dispersants in Gulf seafood, "There is no question Gulf seafood coming to market is safe from oil or dispersant residue."

(http://www.noaa.gov/stories/2010/20101029_seafood.html)

Corexit® 9500 Ingredients	Common Day-to-Day Use Examples
Span™ 80 (surfactant)	Skin cream, body shampoo, emulsifier in juice
Tween® 80 (surfactant)	Baby bath, mouth wash, face lotion, emulsifier in food
Tween® 85 (surfactant)	Body/Face lotion, tanning lotions
Aerosol® OT (surfactant)	Wetting agent in cosmetic products, gelatin, beverages
Glycol butyl ether (solvent)	Household cleaning products
Isopar™ M (solvent)	Air freshener, cleaner

*<http://www.nalco.com/applications/corexit-technology.htm>

Relative Toxicity

Environment Canada Study

<u>Product</u>	<u>Toxicity (ppm)</u>
Palmolive [®] Dish Soap	13
Sunlight [®] Dish Soap	13
Mr. Clean [®]	30
Corexit [®] 9527	108
Corexit [®] 9500	350

(96 HR Rainbow Trout LC50)

Less toxic

Subsea Injection of Dispersants

- Preliminary observations of Macondo Well experience
- Benefits of subsea injection
- Long-term fate and effects

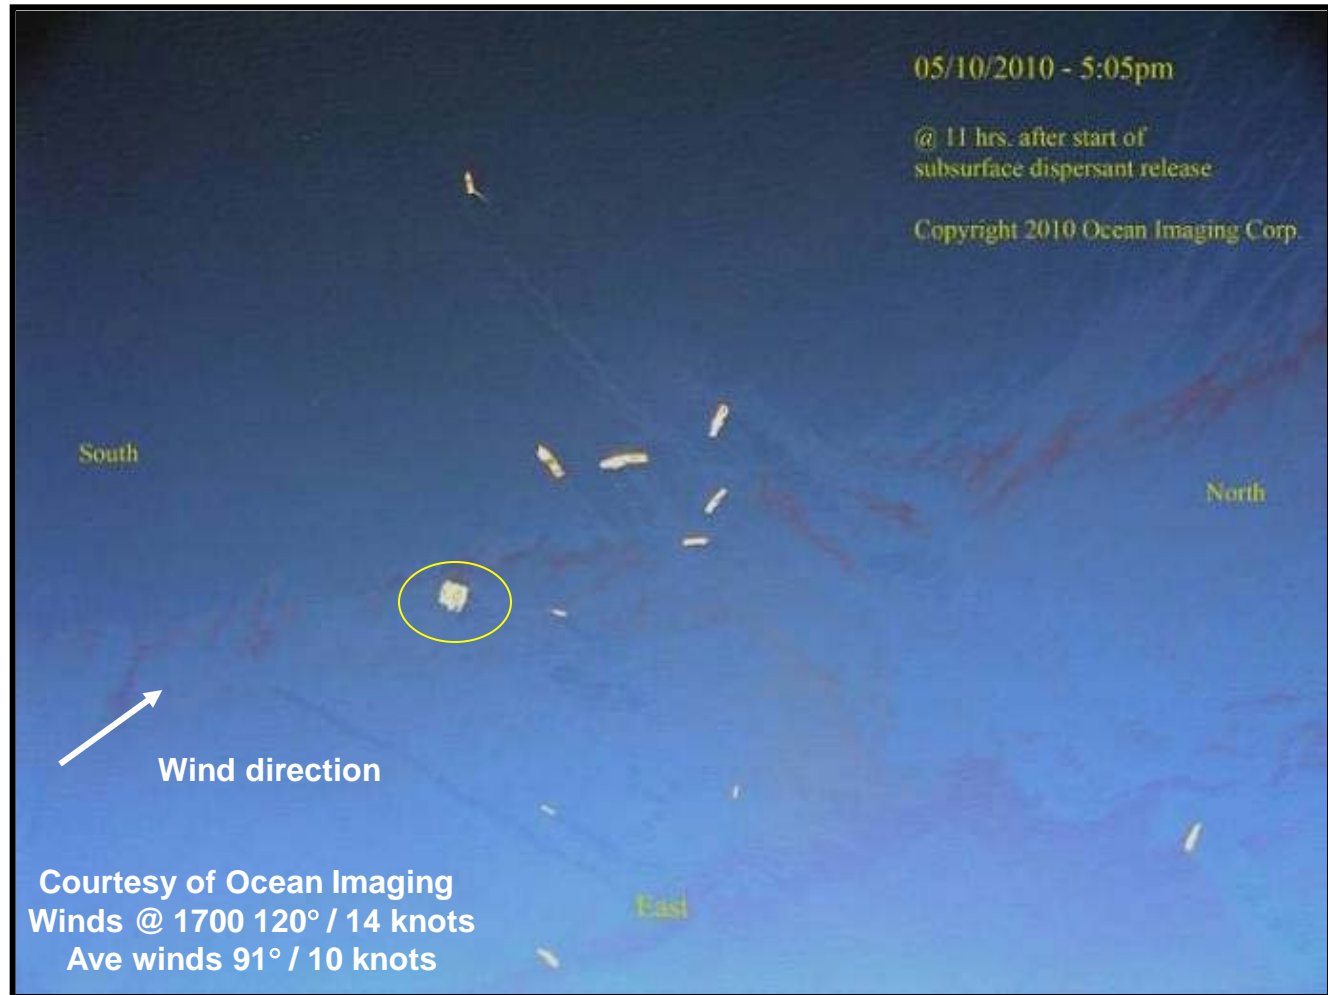

Release Site May 9, 2010 Prior to Injection

Release Site May 10, 2010 3 hours of Injection

Release Site May 10, 2010 11 hours of Injection

Release Site May 11, 2010 5 hours after Injection Ended

Release Site May 12 28 hours After Injection Ended

Summary

- Oil spill response must be robust and should use all available tools
- Highest priority is human health and safety
- Basic strategy for addressing a spill
 - Respond as close to the source as possible
 - Use all appropriate tools to keep oil from reaching shorelines
- Dispersant use presents significant advantages over the limitations of mechanical recovery and should be considered as a primary response option
- Work is ongoing to enhance response capabilities

Areas of Recent Activities and Ongoing Interest

- New Aerial Dispersant Delivery Platform
- Joint Industry Projects via IPIECA/IOGP and API

New Delivery Platform

- 727 developed by Oil Spill Response Limited (OSRL)
 - Shorter transit times
 - Large payload
 - Demonstrated capability for dispersant application

The Oil Spill Response Joint Industry Project

- Initially a three – year project (2012 – 2014) addressing recommendations for spill response developed following the Montara and Macondo incidents – Phase II complete 2016
- Nineteen members, twenty-two projects
- Improving co-ordination between the many groups that are also working global oil spill response issues
- Dispersant issues were addressed in about 20% of the JIP work streams

Dispersant Education

- Joined with API to co-fund NEBA communication project: Completed with “scan / glance” products
- Joined with API to co-fund SL Ross dispersant paper review panel: Summary of reviews complete
- Joined with API to develop materials on dispersants – added material on toxicity and human health; core basis is the API dispersant fact sheets – posted on website
- Make the most of communication opportunities, e.g., IOSC, InterSpill, Spillcon, SPE conferences and others as they arise

The Communications Challenge

- All avenues for sharing information need to be considered

OIL SPILL RESPONSE COMMUNICATION TOOLS: SIMPLY CONVEYING COMPLEX TOPICS

THE CHALLENGE → When the most available information is misinformation

THE SOLUTION → Proactively communicating information simply and consistently across multiple channels

---	---

Other Communications Products

- In addition to dispersants, other complementary topics are being addressed
 - ✓ The goal is to have a suite of materials available as broadly as possible
 - ✓ Consistent presentation formats
 - ✓ Short narrated videos based on the presentations have been developed
 - ✓ Integral components of OSRL
Confident Ambassador material

The Good Practice Guides

- GPGs fit into several themes

STRATEGY

- Oil Spill Preparedness & Response - Framework
- Incident Management Strategies
- SIMA/NEBA

RESPONSE

- Aerial Surveillance
- Dispersants: Sea surface
- Dispersants: Subsurface
- At Sea Containment and Recovery
- In-Situ Controlled Burning
- Shoreline Response Planning and SCAT
- Shoreline Cleanup Techniques
- Inland Responses
- Waste Management
- Oiled Wildlife Management
- Economic Assessment and Compensation
- Responder Health and Safety

PREPAREDNESS

- Contingency Planning
- Sensitivity Mapping
- Tiered Preparedness & Response
- Training
- Exercise Planning

IMPACTS

- Impacts on Marine Ecology
- Impacts on Shorelines

The Good Practice Guides

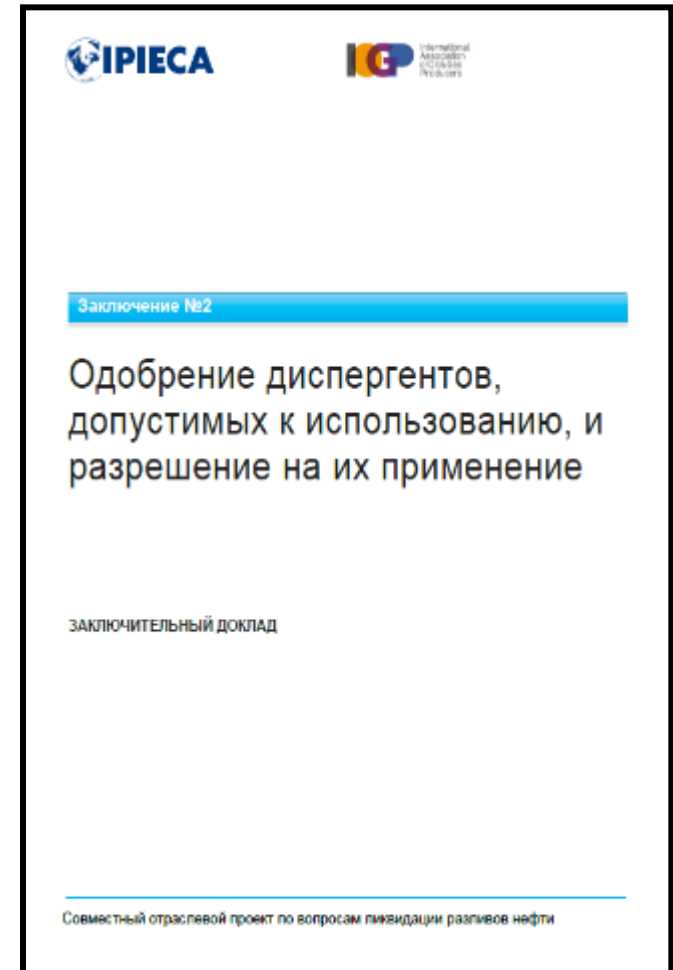

How many have you seen/read?

- Hard copy, tablet, computer memory

Future Work

- Completion of the last few
- Translations – 22 documents
 - French, Portuguese, Russian and Spanish
 - 8 additionally in German and Italian
 - Phased delivery thru 2016 into Spring 2017
- Posted on JIP website as soon as each one is completed

Dispersant Focus - Subsea Bench Scale Testing Protocol

- Focus on testing and scaling to applicable to API's subsea dispersant program ("D3") using the same crude oils and dispersants
- SINTEF (Norway) & Cedre (France) running parallel testing programs
 - ✓ Kickoff June 2013 in Trondheim, Norway
 - ✓ Complete and comparative assessment has been received

Development of Bench Scale Subsea Dispersant Effectiveness Test (IPIECA/IOGP)

- Four crude oils
- Three dispersants
- Two mixing regimes (high and low energy)
- Similar (but different) experimental set-up and analysis
- Studies completed and presented at AMOP

Cedre (France)

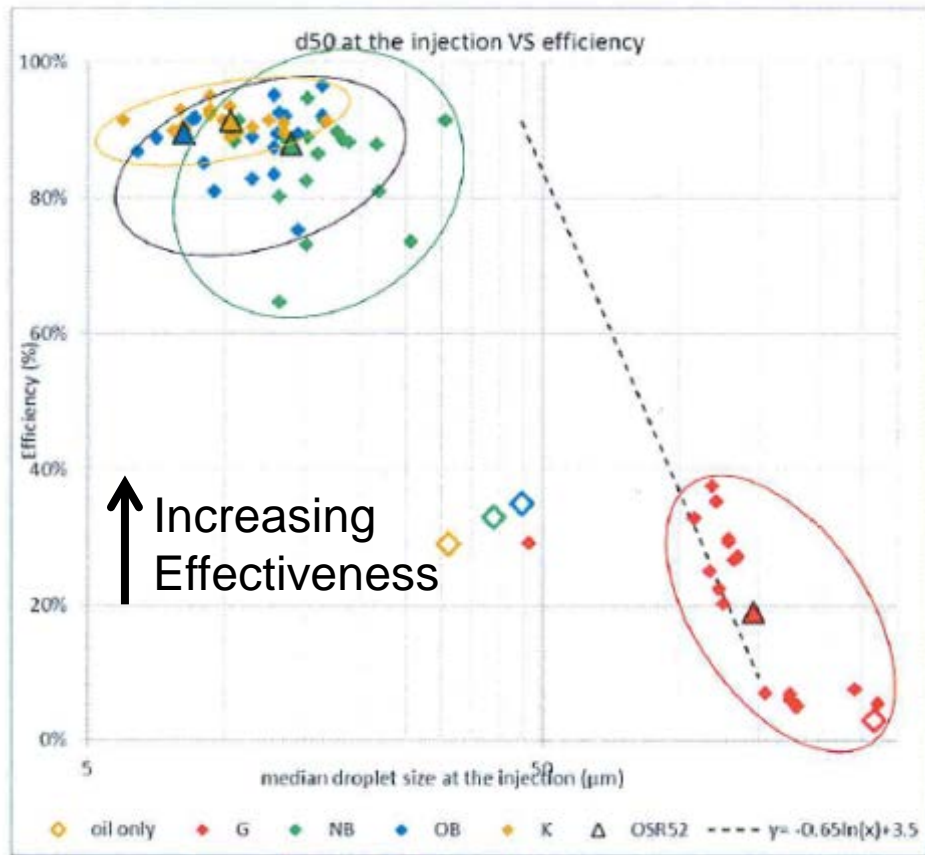

April 8, 2014 Cedre

SINTEF (Norway)

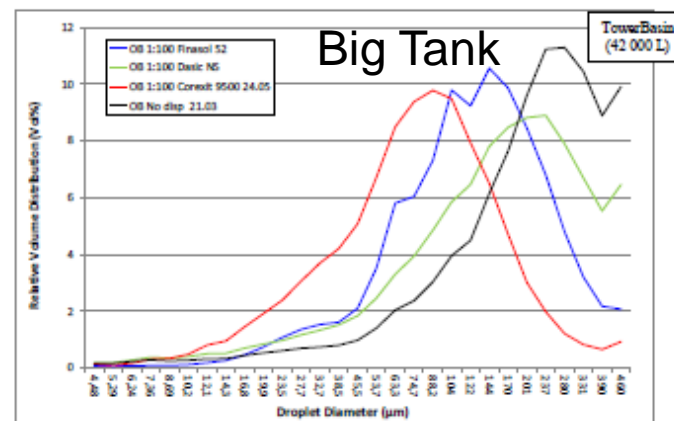

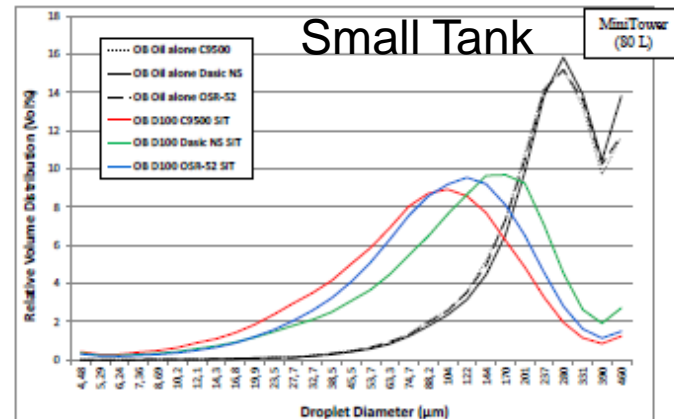

Example of Results: Droplet Size Effects

Cedre: Different Oils

Increasing droplet size \longrightarrow

SINTEF: Different Dispersants

Demonstration of Subsea Dispersant Effectiveness (API)

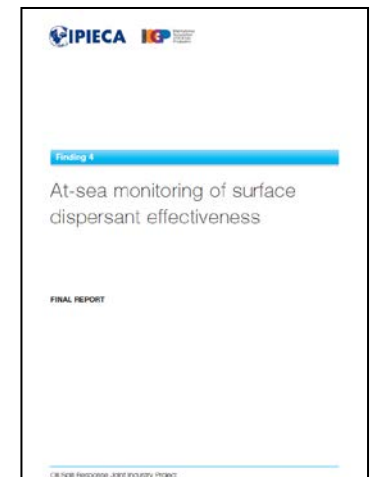

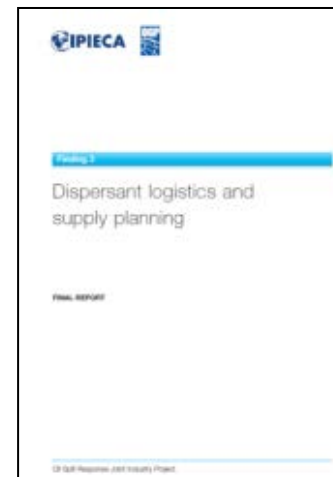

OHMSETT Facility, New Jersey, July, 2014

Funded by API Joint Industry Task Force

Other Dispersant Efforts

- Dispersant logistics & preplanning
- SMART/post-spill monitoring protocols
 - ✓ Can SMART be used to judge post-spill monitoring following dispersant spraying from an aircraft, as well as during more conventional use from a surface vessel?
 - ✓ Consultant R Goodman / Author OSRL

Dispersant Approval and Authorization Focus

The role of dispersant regulations

- Part 1: Dispersant product approval
 - ✓ Overview of the approval process
 - ✓ Effectiveness testing for product approval
 - ✓ Toxicity testing for product approval
 - ✓ Suggested additional information required for product approval
- Part 2: Dispersant use authorization
 - ✓ Use of NEBA/SIMA
 - ✓ Oil spill risk and dispersant use authorization

Dispersant Use Across the Globe

- Dispersants are a 1st or 2nd response option in many countries today

• ANGOLA	• LEBANON
• ARGENTINA	• LIBYA
• AUSTRALIA	• MALAYSIA
• BELGIUM	• MALTA
• BRAZIL	• MEXICO

■ COUNTRIES WHERE DISPERSANTS ARE FIRST OR SECOND RESPONSE OPTION

Many countries consider dispersants an important tool in oil spill response. However, there is global inconsistency in the types of approved dispersants and how and when to use them.

Oil Spill Preparedness and Response: A Good Practice Framework

Oil Spill Preparedness and Response Framework

This document outlines the basics of Oil Spill Preparedness and Response used by industry in responding to an oil spill. It explains how the industry has developed a framework of options for responding to oil spills and shows:

- Why effective Oil Spill Preparedness and Response is so critical
- What makes an Oil Spill Preparedness and Response framework effective
- The components of our Oil Spill Preparedness and Response framework
- How to support Oil Spill Preparedness and Response effort

The infographic is titled 'SUBSEA AND POINT SOURCE DISPERSANT OPERATIONS'. It features a central graphic of a gear with a globe inside, surrounded by a purple border. The text describes dispersant operations, including the use of dispersants to break down oil into smaller droplets, the importance of dispersant quality, and the need for dispersant storage and handling. It also mentions the use of dispersants in subsea operations and the importance of dispersant storage and handling.

The infographic is titled 'Fact Sheet Series' and lists various topics related to oil spill response. The topics include: 'Introduction to Dispersants', 'Dispersants - General Health and Safety', 'Inland Oil Spill Response', 'Seas and Dispersants', 'Dispersant Storage and Handling', 'Assessing Dispersant Use Trade-offs', 'Land and Great Lakes Dispersant Operations', 'Subsea and Point Source Dispersant Operations', 'Dispersant Use and Response Tools', and 'Dispersant Use in the Arctic Region'.
