

STAFF SUMMARY FOR FEBRUARY 7-8, 2018

26. KLAMATH RIVER BASIN SALMON SPORT FISHING**Today's Item****Information** ☒**Action** ☐

Discuss proposed changes to Klamath River Basin salmon sport fishing regulations.

Summary of Previous/Future Actions

- Notice hearing Dec 6-7, 2017; San Diego
- **Today's discussion hearing Feb 7-8, 2018; Sacramento**
- Adoption hearing Apr 12, 2018; Teleconference

Background

In Dec 2017, FGC authorized publication of notice of its intent to amend the Klamath River Basin salmon sport fishing regulations. The Klamath River System, which consists of the Klamath River and Trinity River systems, is managed through a cooperative system of State, Federal and tribal management agencies.

FGC annually adopts Klamath River Basin salmon sport fishing regulations for consistency with federal fishery management goals. Specific bag and possession limits for Klamath River Basin Fall-run Chinook Salmon (KRFC) are scheduled for adoption after the Pacific Fishery Management Council (PFMC) has reviewed the status of West Coast salmon stocks and final fishery allocation recommendations have been adopted. Two tribal entities within the Klamath River System (Hoopa Valley Tribe and Yurok Tribe) maintain in-river fishing rights for ceremonial, subsistence and commercial fishing purposes that are accounted for in allocations and managed consistent with federal fishery management goals.

At its Apr 18, 2017 teleconference, FGC adopted regulations prohibiting the take and possession of both adult (over 22" total length) and grilse (less than or equal to 22" total length) KRFC, closing the KRFC fishery for 2017.

Subsection 7.50(b)(91.1) is proposed for amendment to:

1. *Re-establish the pre-2017 fishery measures and structure.*
This amendment is intended to maximize fishing opportunity and maintain previous protective measures during the open season.
2. *Change the quota, bag limit and possession limit.*
For notice purposes, DFW recommends an allocation range of 0-67,600 adult KRFC; a bag limit between 0-4 KRFC, of which 0-4 may be adult KRFC until the quota is met, then 0 adult KRFC; and a possession limit of 0-12 KRFC, of which 0-4 may be adult fish when the take of adult fish is allowed.
3. *Clean up for clarity and consistency.*

Pre-season stock projections of 2018 adult KRFC will not be available from PFMC until Mar 2018. The 2018 basin allocation will be recommended by PFMC at its Apr 4-11, 2018 meeting. If the full closure of the fall salmon fishing season is deemed necessary again for 2018, FGC may adopt the no-change alternative.

STAFF SUMMARY FOR FEBRUARY 7-8, 2018

RECEIVED
CALIFORNIA
FISH AND GAME
COMMISSION

2017 NOV 20 PM 12:06

Memorandum

Date: November 16, 2017

To: Valerie Termini
Executive Director
Fish and Game Commission

From: Charlton H. Bonham
Director

Subject: **Submission of Initial Statement of Reasons to Amend Subsection (b)(91.1) of Section 7.50, Title 14, CCR, Klamath River Basin Sport Fishing Regulations**

Please find attached the Initial Statement of Reasons (ISOR) package for the 2018 Klamath River Basin sport fishing regulations. As in the past, specific bag and possession limits for Klamath River Basin adult fall-run Chinook Salmon will be adopted after federal (Pacific Fisheries Management Council) review of west coast salmon stocks and fishery allocations have been proposed.

The proposed regulatory action will re-establish the pre-2017 fishery management measures and quota structure for Klamath River Basin adult fall-run Chinook Salmon to maximize fishing opportunities, reinstate previous protective measures during the open fishing season, and adhere to previous recreational intra-basin sharing allocations. If the full fall salmon fishing season closure is deemed necessary again for 2018, the no change alternative provides this option.

If you have any questions or need additional information, please contact Kevin Shaffer, Chief, Fisheries Branch, at (916) 327-8841 or by e-mail at Kevin.Shaffer@wildlife.ca.gov. The public notice should identify Senior Environmental Scientist, Wade Sinnen, as the Department's point of contact for this rulemaking. Mr. Sinner can be reached at (707) 822-5119 or by e-mail at Wade.Sinnen@wildlife.ca.gov.

STATE OF CALIFORNIA
FISH AND GAME COMMISSION
INITIAL STATEMENT OF REASONS FOR REGULATORY ACTION
(Pre-publication of Notice Statement)

Amend Subsection (b)(91.1) of Section 7.50
Title 14, California Code of Regulations
Re: Klamath River Basin Sport Fishing Regulations

I. Date of Initial Statement of Reasons: October 23, 2017

II. Dates and Locations of Scheduled Hearings:

(a) Notice Hearing: Date: December 6, 2017
Location: San Diego

(b) Discussion Hearing: Date: February 8, 2018
Location: Sacramento

(c) Adoption Hearing: Date: April 12, 2018
Location: Teleconference

III. Description of Regulatory Action:

(a) Statement of Specific Purpose of Regulation Change and Factual Basis for Determining that Regulation Change is Reasonably Necessary:

The Klamath River Basin, which consists of the Klamath River and Trinity River systems, is managed through a cooperative system of State, federal, and tribal management agencies. Salmonid regulations are designed to meet natural and hatchery escapement needs for salmonid stocks, while providing equitable harvest opportunities for ocean sport, ocean commercial, river sport and tribal fisheries.

The Pacific Fishery Management Council (PFMC) is responsible for adopting recommendations for the management of sport and commercial ocean salmon fisheries in the Exclusive Economic Zone (three to 200 miles offshore) off the coasts of Washington, Oregon, and California. When approved by the Secretary of Commerce, these recommendations are implemented as ocean salmon fishing regulations by the National Marine Fisheries Service (NMFS).

The California Fish and Game Commission (Commission) adopts regulations for the ocean salmon sport (inside three miles) and the Klamath River Basin sport fisheries which are consistent with federal fishery management goals.

Two tribal entities within the Klamath River Basin, the Hoopa Valley Tribe and the Yurok Tribe, maintain fishing rights for ceremonial, subsistence and commercial fisheries that are managed consistent with federal fishery management goals. Tribal fishing regulations are promulgated by the Hoopa and Yurok tribes.

For the purpose of PFMC mixed-stock fishery modeling and salmon stock assessment, salmon greater than 22 inches are defined as adult salmon (ages 3-5) and salmon less than or equal to 22 inches are defined as grilse salmon (age 2).

Klamath River Fall-Run Chinook Salmon

Adult Klamath River fall-run Chinook Salmon (KRFC) harvest allocations and natural spawning escapement goals are established by the PFMC. The KRFC harvest allocation between tribal and non-tribal fisheries is based on court decisions and allocation agreements between the various fishery representatives.

All proposed closures for adult KRFC are designed to ensure sufficient spawning escapement in the Klamath River Basin and equitably distribute harvest while operating within annual allocations.

Klamath River Spring-Run Chinook Salmon

The Klamath River Basin also supports Klamath River spring-run Chinook Salmon (KRSC). Naturally produced KRSC are both temporally and spatially separated from KRFC in most cases.

Presently, KRSC stocks are not managed or allocated by the PFMC. The in-river sport fishery is managed by general basin seasons, daily bag limit, and possession limit regulations. KRSC harvest will be monitored on the lower Klamath River in 2018 and ensuing years by creel survey.

KRFC Allocation Management

In 2017, the PFMC approved a historically low 129 adult KRFC quota for in-river sport harvest allocation for 2017. Preseason stock projections of 2018 adult KRFC abundance will not be available from the PFMC until March 2018. The 2018 basin allocation will be recommended by the

PFMC in April 2018 and presented to the Commission for adoption prior to its April 2018 meeting.

The Commission may modify the KRFC in-river sport harvest allocation which is normally 15 percent of the non-tribal PFMC harvest allocation. Commission modifications need to meet biological and fishery allocation goals specified in law or established in the PFMC Salmon Fishery Management Plan otherwise harvest opportunities may be reduced in the California ocean or in-river fisheries.

The annual KRFC in-river harvest allocation is split into four geographic areas with subquotas assigned to each. They are as follows:

1. for the main stem Klamath River from 3,500 feet downstream of the Iron Gate Dam to the Highway 96 bridge at Weitchpec -- 17 percent of the sport fishery allocation;
2. for the main stem Klamath River from downstream of the Highway 96 bridge at Weitchpec to the mouth -- 50 percent of the sport fishery allocation;
3. for the Trinity River downstream of the Old Lewiston Bridge to the Highway 299 West bridge at Cedar Flat -- 16.5 percent of the sport fishery allocation; and
4. for the Trinity River downstream from the Denny Road bridge at Hawkins Bar to the confluence with the Klamath River -- 16.5 percent of the sport fishery allocation.

From 2014 to 2016, the spit area (within 100 yards of the channel through the sand spit formed at the Klamath River mouth) closed to all fishing after 15 percent of the total Klamath River Basin quota had been taken downstream of the Highway 101 bridge. This regulatory language was removed in 2017 to eliminate catch and release mortality.

These geographic areas are based upon the historical distribution of angler effort and ensure equitable harvest of adult KRFC in the upper Klamath River and Trinity River. The subquota system requires the Department of Fish and Wildlife (Department) to monitor angler harvest of adult KRFC in each geographic area. All areas will be monitored on a real time basis except for the following:

Klamath River upstream of Weitchpec and the Trinity River: Due to funding and personnel reductions, the Department will be unable to deploy adequate personnel to conduct harvest monitoring in the Klamath River upstream of Weitchpec and in the Trinity River for the 2018 season. The Department has reviewed salmon harvest and run-timing data for these

areas. Based on this review, the Department has developed a Harvest Predictor Model (HPM) which incorporates historic creel survey data from the Klamath River downstream of Iron Gate Dam to the confluence with the Pacific Ocean and the Trinity River downstream of Lewiston Dam to the confluence with the Klamath River. The HPM is driven by the positive relationship between KRFC harvested in the lower and upper Klamath River and the Trinity River. The HPM will be used by the Department to implement fishing closures to ensure that anglers do not exceed established subquota targets.

Current Sport Fishery Management

The KRFC in-river sport harvest allocation is divided into geographic areas and harvest is monitored under real time subquota management. KRSC in-river sport harvest is managed by general season, daily bag limit, and possession limit regulations.

The Department presently differentiates the two stocks by the following dates:

Klamath River

1. January 1 through August 14 - General Season KRSC.
For purposes of clarity, daily bag and possession limits apply to that section of the Klamath River downstream of the Highway 96 bridge at Weitchpec to the mouth.
2. August 15 to December 31 - KRFC quota management.

Trinity River

1. January 1 through August 31 – General Season KRSC.
For purposes of clarity, daily bag and possession limits apply to that section of the Trinity River downstream of the Old Lewiston Bridge to the confluence with the South Fork Trinity River.
2. September 1 through December 31 – KRFC quota management.

The daily bag and possession limits apply to both stocks within the same sub-area and time period.

Due to the extremely small quota, take and possession of adult and grilse KRFC was prohibited in 2017.

Proposed Changes

Because PFMC recommendations are not known at this time, a range (shown in brackets in the text below) of bag and possession limits, which

encompass historical quotas, is being proposed for the 2018 KRFC fishery in the Klamath and Trinity rivers. The final KRFC bag and possession limits will align with the final federal regulations to meet biological and fishery allocation goals specified in law or established in the PFMC Salmon Fishery Management Plan, otherwise harvest opportunities may be reduced in the California ocean fisheries.

If the full closure of the fall salmon fishing season is deemed necessary again for 2018, the no change alternative provides this option.

The proposed open seasons and range of bag and possession limits for KRFC stocks are as follows:

KRFC QUOTA MANAGEMENT: Seasons, Bag and Possession Limits

For public notice requirements, the Department recommends the Commission consider an allocation range of 0 – 67,600 adult KRFC in the Klamath River Basin for the river sport fishery. This recommended range encompasses the historical range of the Klamath River Basin allocations and allows the PFMC and Commission to make adjustments during the 2018 regulatory cycle.

As in previous years, no retention of adult KRFC is proposed for the following areas, once the subquota has been met.

The proposed open seasons and range of bag and possession limits for KRFC stocks are as follows:

1. Klamath River - August 15 to December 31
2. Trinity River - September 1 to December 31
3. Bag Limit - [0-4] Chinook Salmon – of which no more than [0-4] fish over 22 inches total length may be retained until the subquota is met, then 0 fish over 22 inches total length.
4. Possession limit - [0-12] Chinook Salmon of which [0–4] fish over 22 inches total length may be retained when the take of salmon over 22 inches total length is allowed.

The proposed regulatory action will also re-establish the pre-2017 fishery measures and structure for KRFC to maximize fishing opportunities and maintain previous protective measures during the open fishing season.

Proposed regulatory changes for the Klamath River mouth's spit area during the open fishing season in order to achieve a balance between maintaining historical fishing opportunity for shore-based angling and

providing protection for salmon migrating out of the open ocean into the Klamath River estuary, and to release hook and release mortality:

Subsection (D)2.b.(i):

The Spit Area (within 100 yards of the channel through the sand spit formed at the Klamath River mouth) will close when 15% of the total Klamath River Basin quota is taken downstream of the Highway 101 bridge.

Subsection (E)2.b.:

Fall Run Quota Exception: Spit Area (within 100 yards of the channel through the sand spit formed at the Klamath River mouth). This area will be closed to all fishing after 15% of the Total Klamath River Basin Quota has been taken.

All legally caught Chinook Salmon must be retained. Once the adult (greater than 22 inches) component of the total daily bag limit has been retained anglers must cease fishing in the spit area.

Proposed regulatory changes to re-establish additional upper basin fishing opportunities once the Iron Gate and Trinity River hatcheries have met their annual hatchery mitigation egg take goal in areas where natural spawning is limited and harvest will be composed primarily of excess hatchery fish that would otherwise die of natural causes:

Subsection (E)2.a.:

Fall Run Quota Exception: Chinook Salmon over 22 inches total length may be retained from 3,500 feet downstream of Iron Gate Dam to the Interstate 5 bridge when the Department determines that the adult fall-run Chinook Salmon spawning escapement at Iron Gate Hatchery exceeds 8,000 fish. Daily bag and possession limits specified for fall-run Chinook Salmon apply during this exception.

Subsection (E)6.b.:

Fall Run Quota Exception: Chinook Salmon over 22 inches total length may be retained downstream of the Old Lewiston Bridge to the mouth of Indian Creek when the Department determines that the adult fall-run Chinook Salmon spawning escapement at Trinity River Hatchery exceeds 4,800 fish. Daily bag and possession limits specified for fall-run Chinook Salmon apply during this exception.

Proposed regulatory changes in subsection (A)2.:

In 2017, the word “adult” was removed in two places in this subsection to clarify that no Chinook Salmon may be removed from the water during the closure since the closure applied to all Chinook Salmon. “Adult” is proposed to be re-inserted to avoid unnecessarily prohibiting the removal of grilse Chinook Salmon from the water if take of grilse Chinook Salmon is approved for 2018.

Subsection (D)1.: For transparency purposes, the proposed regulatory language also re-inserts pre-2017 language concerning how the Department will notify the Commission and the public concerning any restrictions triggered by the quotas and language describing the information provided on the Department’s hotline. Also in this subsection, the proposed regulation repeals the text stating that all fishing for KRFC is prohibited since the proposed regulations will re-open fishing for KRFC.

No changes are proposed for the general (KRSC) opening and closing season dates, and bag, possession and size limits.

Other changes are proposed for clarity and consistency.

Benefits of the Proposed Regulations

It is the policy of this State to encourage the conservation, maintenance, and utilization of the living resources of the ocean and inland waters under the jurisdiction and influence of the State for the benefit of all the citizens of the State. In addition, it is the policy of this State to promote the development of local California fisheries in harmony with federal law respecting fishing and the conservation of the living resources of the ocean and inland waters under the jurisdiction and influence of the State. The objectives of this policy include, but are not limited to, the maintenance of sufficient populations of all species of aquatic organisms to ensure their continued existence and the maintenance of a sufficient resource to support a reasonable sport use. Adoption of scientifically-based Klamath River Basin salmon seasons, size limits, and bag and possession limits provides for the maintenance of sufficient populations of salmon to ensure their continued existence.

The benefits of the proposed regulations are conformance with federal law, sustainable management of Klamath River Basin fish resources, health and welfare of California residents and promotion of businesses that rely on salmon sport fishing in the Klamath River Basin.

- (b) Authority and Reference Sections from Fish and Game Code for Regulation:

Authority: Sections 200, 205, 265, 270, 315, 316.5, and 399 Fish and Game Code.

Reference: Sections 200, 205, 265, 270, and 316.5, Fish and Game Code.

- (c) Specific Technology or Equipment Required by Regulatory Change:

None.

- (d) Identification of Reports or Documents Supporting Regulation Change:

In-River Sport Fishing Economics Technical Report, National Oceanographic and Atmospheric Administration, National Marine Fisheries Service, September 2011.

- (e) Public Discussions of Proposed Regulations Prior to Notice Publication:

No public meetings are being held prior to the notice publication. The 45-day comment period provides adequate time for review of the proposed amendments.

IV. Description of Reasonable Alternatives to Regulatory Action:

- (a) Alternatives to Regulation Change:

The use of more liberal regulations for bag limits, possession limits and fishing methods. For KRFC, more liberal regulations would be less desirable than those proposed because they could create risk of an intense fishery reaching or exceeding the quota in a very short time. Reaching the quota in a very short time could be damaging to the local economy. Exceeding the allowable harvest could be damaging to the KRFC stocks.

- (b) No Change Alternative:

The No Change Alternative would leave the current 2017 KRFC fishing closure in the Klamath and Trinity rivers in place. The 2017 KRFC stock projections developed by the PFMC were the lowest on record. As a result, the KRFC stock is now classified under the PFMC Salmon Fishery Management Plan as “approaching an overfished condition.” If KRFC

stock projections do not improve for 2018, the Department may recommend the Commission adopt a no change to keep the closure in place for the KRFC fishery in the Klamath and Trinity rivers.

(c) Consideration of Alternatives:

In view of information currently possessed, no reasonable alternative considered would be more effective in carrying out the purpose for which the regulation is proposed, would be as effective and less burdensome to affected private persons than the proposed regulation, or would be more cost effective to affected private persons and equally effective in implementing the statutory policy or other provision of law.

V. Mitigation Measures Required by Regulatory Action:

The proposed regulatory action will have no negative impact on the environment; therefore, no mitigation measures are needed.

VI. Impact of Regulatory Action:

The potential for significant statewide adverse economic impacts that might result from the proposed regulatory action has been assessed, and the following initial determinations relative to the required statutory categories have been made:

(a) Significant Statewide Adverse Economic Impact Directly Affecting Businesses, Including the Ability of California Businesses to Compete with Businesses in Other States:

The proposed action will not have a significant statewide adverse economic impact directly affecting business, including the ability of California businesses to compete with businesses in other states. The proposed regulations are projected to result in increases to visitor spending, and correspondingly positive impacts on the net revenues to local businesses servicing sport fishermen. This is not likely to affect the ability of California businesses to compete with businesses in other states. The preservation of Klamath River salmon stocks is necessary for the success of lower Klamath River Basin businesses which provide goods and services related to fishing. The proposed changes are necessary for the continued preservation of the resource and therefore the prevention of adverse economic impacts.

(b) Impact on the Creation or Elimination of Jobs Within the State, the Creation of New Businesses or the Elimination of Existing Businesses, or the Expansion of Businesses in California; Benefits of the Regulation to

the Health and Welfare of California Residents, Worker Safety, and the State's Environment:

The proposed regulations to reopen the KRFC fishery for 2018 range from no fishing of adult KRFC to a 2016 KRFC season structure. The Commission anticipates positive impact on the creation or elimination of jobs in California. The potential positive employment impacts range from 0 to 45 jobs. The Commission anticipates positive impacts on the creation, elimination or expansion of businesses in California from increased revenues to the approximately 30 businesses that serve sport fishing activities. The impacted businesses are generally small businesses employing few individuals and, like all small businesses, are subject to success or failure for a variety of causes. Additionally, the long-term intent of the proposed action is to increase sustainability in fishable salmon stocks and, consequently promoting the long-term viability of these same small businesses.

The Commission anticipates benefits to the health and welfare of California residents. Providing opportunities for a salmon sport fishery encourages a healthy outdoor activity and the consumption of a nutritious food.

The Commission anticipates benefits to the environment by the sustainable management of California's salmonid resources.

The Commission does not anticipate any benefits to worker safety because the proposed action does not affect working conditions.

Other benefits include concurrence with federal regulation and promotion of businesses that rely on salmon sport fishing in the Klamath River Basin.

(c) Cost Impacts on a Representative Private Person or Business:

The agency is not aware of any cost impacts that a representative private person or business would necessarily incur in reasonable compliance with the proposed action.

(d) Costs or Savings to State Agencies or Costs/Savings in Federal Funding to the State: If bag and possession limits are increased, the Department may have an increase in salmon card sales revenue estimated up to \$88,550. The Commission does not anticipate any costs or savings in federal funding to the State.

(e) Nondiscretionary Costs/Savings to Local Agencies:

If the KRFC fishery is reopened for 2018, it may result in increased visits and angler spending in the Klamath River Basin area; local governments' sales, motor fuel and transient occupancy taxes may increase by as much as \$138,000, and state and local income taxes may increase by as much as \$431,724.

(f) Programs Mandated on Local Agencies or School Districts:

None.

(g) Costs Imposed on Any Local Agency or School District that is Required to be Reimbursed Under Part 7 (commencing with Section 17500) of Division 4, Government Code:

None.

(h) Effect on Housing Costs:

None.

VII. Economic Impact Assessment:

The regulatory amendments of subsection 7.50(b)(91.1) under consideration will set the 2018 Klamath River Basin salmon sport fishing regulations to conform to the PFMC KRFC allocation guidelines. The Klamath River Basin is anticipated to reopen for salmon sport fishing at levels similar to the 2016 levels; however, the possibility of marine fishery area closures still exists. Ocean closures may in turn result in PFMC recommendations for Klamath River Basin salmon sport fishery closures for the take of adult KRFC. The eventual impacts to jobs and businesses will depend on the 2018 KRFC allocation ultimately adopted by the PFMC and the specific regulations promulgated by the Commission.

The proposed regulations to reopen the KRFC fishery for 2018 present a range from 100 percent of the 2016 adult KRFC catch limit to 0 percent or no fishing on adult KRFC (greater than 22 inches). Under all scenarios, sport fishing may be allowed for steelhead and/or grilse KRFC (salmon 22 inches or less) regardless of PFMC regulations, in such case any adverse impacts to businesses would be less severe than under a complete closure of fishing.

Based on a 2011 NMFS report on In-River Sport Fishing Economics of the Klamath River, under a normal season non-resident Klamath River Basin sport salmon and steelhead anglers contribute about \$3,432,424 in direct

expenditures, resulting in about \$4,151,127 (2016\$) in total economic output to California businesses. This revenue supports about 70 jobs in the State.

Table 1. Klamath Salmon and Steelhead Total Economic Output

Klamath Sport Fishing	Salmon	Steelhead	Total
Total Output	\$ 2,687,270	\$ 1,463,857	\$ 4,151,127
Labor Income	\$ 1,243,364	\$ 677,307	\$ 1,920,671
Jobs	45.7	24.9	70.6

The NMFS study excluded the Trinity River, the largest tributary to the Klamath. The Trinity River is allocated 33 percent of the KRFC total allocation. Using the Trinity allocation as a measure of salmon angler effort, and thus impacts on associated businesses that support anglers, the total non-resident angler contribution to the entire Klamath River Basin (including the Trinity River) is estimated to be \$4,151,127 (2016\$) in total economic output. This revenue, again using a 33 percent increase to account for the Trinity River, provides an estimated total of 70 jobs in the State (assuming that personnel costs also rise with inflation). This is a conservative estimate of total economic impact as it counts only non-resident angler expenditures. Non-resident salmon or steelhead angler average expenditures are estimated to be \$108.52 (2016\$) per angler day (for lodging, food, gasoline, fishing gear, boat fuel, and guide fees) based on a NMFS sponsored survey. Resident average expenditures per angler day are estimated to be 60 percent less (markedly reduced lodging, gasoline and food expenditures) which yields an estimate of \$43.40 per angler day. Resident anglers comprise about 36 percent of Klamath River Basin anglers.

Three adult salmon catch projections evaluated here are as follows: 100 percent of the 2016 adult KRFC catch limit; 50 percent of the 2016 adult KRFC catch limit; and 0 percent of the 2016 adult KRFC catch limit.

(a) Effects of the Regulation on the Creation or Elimination of Jobs Within the State:

Projection 1. 100 percent of the 2016 adult KRFC catch limit: The Commission anticipates positive impacts (up to 45 jobs) on the creation or elimination of jobs, as the quotas would likely increase the number of visitors and thus probable visitor expenditures in the fishery's areas.

Projection 2. 50 percent of the 2016 adult KRFC catch limit: The Commission anticipates positive impacts on the creation or elimination of jobs. A catch limit equal to 50 percent of the 2016 catch limit increase will likely increase visitor spending by about 50 percent of the 2016 levels.

While difficult to predict, job impacts associated with a catch limit equal to 50 percent of the 2016 catch limit are expected to be about half of the estimated total jobs supported by salmon angler visits (i.e. about 23 jobs).

Projection 3. 0 percent of the 2016 adult KRFC catch limit: In the event of continued fishery closure for adult KRFC, but with the re-opening of fishing for grilse KRFC (salmon 22 inches or less) in all Klamath River Basin areas, the Commission anticipates a slight increase in fishery-related jobs over 2017 when the entire KRFC fishery was closed.

(b) Effects of the Regulation on the Creation of New Businesses or the Elimination of Existing Businesses Within the State:

Projection 1: 100 percent of the 2016 adult KRFC catch limit: The Commission anticipates the potential for positive impacts on the creation of new business or the elimination of existing businesses, as the quotas are likely to increase the number of visitors and thus probable visitor expenditures in the fisheries areas.

Projection 2. 50 percent of the 2016 adult KRFC catch limit: The Commission anticipates an increase in visits and spending in the fishery areas of about 50 percent of the 2016 levels that may result in positive impacts on the creation of new business or the elimination of existing businesses directly related to fishing activities.

Projection 3. 0 percent of the 2016 adult KRFC catch limit: In the event of continued fishery closure for adult KRFC, but with the re-opening of fishing for grilse KRFC (salmon 22 inches or less) in all Klamath River Basin areas, the Commission anticipates a slight increase in regional spending and thus a slight increase in revenues to the approximately 30 businesses that serve sport fishing activities with unknown impacts on the creation of new business or the elimination of existing businesses due to the opportunity to harvest grilse KRFC. Additionally, the long-term intent of the proposed action is to increase sustainability in fishable salmon stocks and, consequently, the long-term viability of these same small businesses.

(c) Effects of the Regulation on the Expansion of Businesses Currently Doing Business Within the State:

Projection 1. 100 percent of the 2016 adult KRFC catch limit: The Commission anticipates the potential for positive impacts on the expansion of businesses in California as the quotas may result in an increase the number of visitors and thus probable visitor expenditures in the fisheries areas. Businesses that may have contracted during the 2017

closure may expand with increased hotel occupancy rates along with increased revenues in salmon fishery-related businesses.

Projection 2. 50 percent of the 2016 adult KRFC catch limit: The Commission anticipates the potential for positive impacts on the expansion of businesses in California with increased expenditures by non-resident and resident anglers associated with increased fishing opportunities.

Projection 3. 0 percent of the 2016 adult KRFC catch limit: In the event of continued fishery closure for adult KRFC, but with the re-opening of fishing for grilse KRFC (salmon 22 inches or less) in all Klamath River Basin areas, the Commission anticipates a slight increase in expenditures by anglers associated with limited fishing opportunities for grilse KRFC which is not expected to have any impacts on the expansion of businesses in California.

(d) Benefits of the Regulation to the Health and Welfare of California Residents:

Under all projections, the Commission anticipates benefits to the health and welfare of California residents. Providing opportunities for a Klamath River Basin sport salmon and steelhead fisheries encourages a healthy outdoor activity and the consumption of a nutritious food. Salmon and steelhead sport fishing also contributes to increased mental health of its practitioners as fishing is a hobby and form of relaxation for many. Salmon and steelhead sport fishing also provides opportunities for multi-generational family activities and promotes respect for California's environment by the future stewards of California's natural resources.

(e) Benefits of the Regulation to Worker Safety:

Under all projections, the Commission does not anticipate benefits to worker safety because the proposed regulations will not impact working conditions.

(f) Benefits of the Regulation to the State's Environment:

Under all projections, the Commission anticipates benefits to the environment in the sustainable management of Klamath River Basin salmonid resources. It is the policy of this State to encourage the conservation, maintenance, and utilization of the living resources of the ocean and inland waters under the jurisdiction and influence of the State for the benefit of all the citizens of the State. In addition, it is the policy of

this State to promote the development of local California fisheries in harmony with federal law respecting fishing and the conservation of the living resources of the ocean and inland waters under the jurisdiction and influence of the State. The objectives of this policy include, but are not limited to, the maintenance of sufficient populations of all species of aquatic organisms to ensure their continued existence and the maintenance of a sufficient resource to support a reasonable sport use. Adoption of scientifically-based Klamath River Basin seasons, size limits, and bag and possession limits provides for the maintenance of sufficient populations of salmon and steelhead to ensure their continued existence.

(g) Other Benefits of the Regulation:

Concurrence with Federal Law: California's salmon sport fishing regulations need to conform to the new Federal regulations to achieve optimum yield in California. The PFMC annually reviews the status of west coast salmon populations. As part of that process, it recommends west coast adult salmon fisheries regulations aimed at meeting biological and fishery allocation goals specified in law or established in the Salmon Fishery Management Plan. These recommendations coordinate west coast management of sport and commercial ocean salmon fisheries off the coasts of Washington, Oregon, and California and California inland sport salmon fisheries. These recommendations are subsequently implemented as ocean fishing regulations by the NMFS and as sport salmon regulations for State marine and inland waters by the Commission.

In addition, the proposed regulations promote businesses that rely on salmon sport fishing in the Klamath River Basin.

Informative Digest/Policy Statement Overview

The Klamath River Basin, which consists of the Klamath River and Trinity River systems, is managed through a cooperative system of State, federal, and tribal management agencies. Salmonid regulations are designed to meet natural and hatchery escapement needs for salmonid stocks, while providing equitable harvest opportunities for ocean sport, ocean commercial, river sport and tribal fisheries.

The Pacific Fishery Management Council (PFMC) is responsible for adopting recommendations for the management of sport and commercial ocean salmon fisheries in the Exclusive Economic Zone (three to 200 miles offshore) off the coasts of Washington, Oregon, and California. When approved by the Secretary of Commerce, these recommendations are implemented as ocean salmon fishing regulations by the National Marine Fisheries Service (NMFS).

The California Fish and Game Commission (Commission) adopts regulations for the ocean salmon sport (inside three miles) and the Klamath River Basin sport fisheries which are consistent with federal fishery management goals.

Two tribal entities within the Klamath River Basin, the Hoopa Valley Tribe and the Yurok Tribe, maintain fishing rights for ceremonial, subsistence and commercial fisheries that are managed consistent with federal fishery management goals. Tribal fishing regulations are promulgated by the Hoopa and Yurok tribes.

For the purpose of PFMC mixed-stock fishery modeling and salmon stock assessment, salmon greater than 22 inches are defined as adult salmon (ages 3-5) and salmon less than or equal to 22 inches are defined as grilse salmon (age 2).

Klamath River Fall-Run Chinook Salmon

Adult Klamath River fall-run Chinook Salmon (KRFC) harvest allocations and natural spawning escapement goals are established by the PFMC. The KRFC harvest allocation between tribal and non-tribal fisheries is based on court decisions and allocation agreements between the various fishery representatives.

All proposed closures for adult KRFC are designed to ensure sufficient spawning escapement in the Klamath River Basin and equitably distribute harvest while operating within annual allocations.

Klamath River Spring-Run Chinook Salmon

The Klamath River Basin also supports Klamath River spring-run Chinook Salmon (KRSC). Naturally produced KRSC are both temporally and spatially separated from KRFC in most cases.

Presently, KRSC stocks are not managed or allocated by the PFMC. The in-river sport fishery is managed by general basin seasons, daily bag limit, and possession limit regulations. KRSC harvest will be monitored on the lower Klamath River in 2018 and ensuing years by creel survey.

KRFC Allocation Management

In 2017, the PFMC approved a historically low 129 adult KRFC quota for in-river sport harvest allocation for 2017. Preseason stock projections of 2018 adult KRFC abundance will not be available from the PFMC until March 2018. The 2018 basin allocation will be recommended by the PFMC in April 2018 and presented to the Commission for adoption prior to its April 2018 meeting.

The Commission may modify the KRFC in-river sport harvest allocation which is normally 15 percent of the non-tribal PFMC harvest allocation. Commission modifications need to meet biological and fishery allocation goals specified in law or established in the PFMC Salmon Fishery Management Plan otherwise harvest opportunities may be reduced in the California ocean and in-river fisheries.

The annual KRFC in-river harvest allocation is split into four geographic areas with subquotas assigned to each. They are as follows:

1. for the main stem Klamath River from 3,500 feet downstream of the Iron Gate Dam to the Highway 96 bridge at Weitchpec -- 17 percent of the sport fishery allocation;
2. for the main stem Klamath River from downstream of the Highway 96 bridge at Weitchpec to the mouth -- 50 percent of the sport fishery allocation;
3. for the Trinity River downstream of the Old Lewiston Bridge to the Highway 299 West bridge at Cedar Flat -- 16.5 percent of the sport fishery allocation; and
4. for the Trinity River downstream from the Denny Road bridge at Hawkins Bar to the confluence with the Klamath River -- 16.5 percent of the sport fishery allocation.

From 2014-2016, the spit area (within 100 yards of the channel through the sand spit formed at the Klamath River mouth) closed to all fishing after 15 percent of the total Klamath River Basin quota had been taken downstream of the Highway 101 bridge. This regulatory language was removed in 2017 to eliminate catch and release mortality.

These geographic areas are based upon the historical distribution of angler effort and ensure equitable harvest of adult KRFC in the upper Klamath River and Trinity River. The subquota system requires the Department to monitor angler harvest of adult KRFC in each geographic area. All areas will be monitored on a real time basis except for the following:

Klamath River upstream of Weitchpec and the Trinity River: Due to funding and personnel reductions, the Department will be unable to deploy adequate personnel to conduct harvest monitoring in the Klamath River upstream of Weitchpec and in the Trinity River for the 2018 season. The Department has reviewed salmon harvest and run-timing data for these areas. Based on this review, the Department has developed a Harvest Predictor Model (HPM) which incorporates historic creel survey data from the Klamath River downstream of Iron Gate Dam to the confluence with the Pacific Ocean and the Trinity River downstream of Lewiston Dam to the confluence with the Klamath River. The HPM is driven by the positive relationship between KRFC harvested in the lower and upper Klamath River and the Trinity River. The HPM will be used by the Department to implement fishing closures to ensure that anglers do not exceed established subquota targets.

Current Sport Fishery Management

The KRFC in-river sport harvest allocation is divided into geographic areas and harvest is monitored under real time subquota management. KRSC in-river sport harvest is managed by general season, daily bag limit, and possession limit regulations.

The Department presently differentiates the two stocks by the following dates:

Klamath River

1. January 1 through August 14 - General Season KRSC.
For purposes of clarity, daily bag and possession limits apply to that section of the Klamath River downstream of the Highway 96 bridge at Weitchpec to the mouth.
2. August 15 to December 31 - KRFC quota management.

Trinity River

1. January 1 through August 31 – General Season KRSC.
For purposes of clarity, daily bag and possession limits apply to that section of the Trinity River downstream of the Old Lewiston Bridge to the confluence with the South Fork Trinity River.
2. September 1 through December 31 – KRFC quota management.

The daily bag and possession limits apply to both stocks within the same sub-area and time period.

Due to the extremely small quota, take and possession of adult and grilse KRFC was prohibited in 2017.

Proposed Changes

Because PFMC recommendations are not known at this time, a range (shown in brackets in the text below) of bag and possession limits, which encompass historical quotas, is being proposed for the 2018 KRFC fishery in the Klamath and Trinity rivers. The final KRFC bag and possession limits will align with the final federal regulations to meet biological and fishery allocation goals specified in law or established in the PFMC Salmon Fishery Management Plan, otherwise harvest opportunities may be reduced in the California ocean fisheries.

If the full closure of the fall salmon fishing season is deemed necessary again for 2018, the no change alternative provides this option.

The proposed open seasons and range of bag and possession limits for KRFC stocks are as follows:

KRFC QUOTA MANAGEMENT: Seasons, Bag and Possession Limits

For public notice requirements, the Department recommends the Commission consider an allocation range of 0 – 67,600 adult KRFC in the Klamath River Basin for the river sport fishery. This recommended range encompasses the historical range of the Klamath River Basin allocations and allows the PFMC and Commission to make adjustments during the 2018 regulatory cycle.

As in previous years, no retention of adult KRFC is proposed for the following areas, once the subquota has been met.

The proposed open seasons and range of bag and possession limits for KRFC stocks are as follows:

1. Klamath River - August 15 to December 31
2. Trinity River - September 1 to December 31
3. Bag Limit - [0-4] Chinook Salmon – of which no more than [0-4] fish over 22 inches total length may be retained until the subquota is met, then 0 fish over 22 inches total length.
4. Possession limit - [0-12] Chinook Salmon of which [0–4] fish over 22 inches total length may be retained when the take of salmon over 22 inches total length is allowed.

The proposed regulatory action will also re-establish the pre-2017 fishery measures and structure for KRFC to maximize fishing opportunities and maintain previous protective measures during the open fishing season.

The word “adult” will be reinserted in subsection (A)2. so that the text will be as it existed prior to 2017: During closures to the take of adult salmon, it shall be unlawful to remove any adult Chinook Salmon from the water by any means.

In subsection (D)1., the proposed regulatory language re-inserts pre-2017 language concerning how the Department will notify the Commission and the public concerning any restrictions triggered by the quotas and language describing the information provided on the Department’s hotline and repeals text that states all fishing is prohibited for KRFC.

Subsection (D)2.b.(i) will be reinserted as it existed prior to 2017:
The Spit Area (within 100 yards of the channel through the sand spit formed at the Klamath River mouth) will close when 15% of the total Klamath River Basin quota is taken downstream of the Highway 101 bridge.

Subsection (E)2.a. will be reinserted as it existed prior to 2017:
Fall Run Quota Exception: Chinook Salmon over 22 inches total length may be retained from 3,500 feet downstream of Iron Gate Dam to the Interstate 5 bridge when the Department determines that the adult fall-run Chinook Salmon spawning escapement at Iron Gate Hatchery exceeds 8,000 fish. Daily bag and possession limits specified for fall-run Chinook Salmon apply during this exception.

Subsection (E)2.b. will be reinserted as it existed prior to 2017:
Fall Run Quota Exception: Spit Area (within 100 yards of the channel through the sand spit formed at the Klamath River mouth). This area will be closed to all fishing after 15% of the Total Klamath River Basin Quota has been taken.

All legally caught Chinook Salmon must be retained. Once the adult (greater than 22 inches) component of the total daily bag limit has been retained anglers must cease fishing in the spit area.

Subsection (E)6.b. will be reinserted as it existed prior to 2017:
Fall Run Quota Exception: Chinook Salmon over 22 inches total length may be retained downstream of the Old Lewiston Bridge to the mouth of Indian Creek when the Department determines that the adult fall-run Chinook Salmon spawning escapement at Trinity River Hatchery exceeds 4,800 fish. Daily bag and possession limits specified for fall-run Chinook Salmon apply during this exception.

No changes are proposed for the general (KRSC) opening and closing season dates, and bag, possession and size limits.

Other changes are proposed for clarity and consistency.

Benefits of the Proposed Regulations

It is the policy of this State to encourage the conservation, maintenance, and utilization of the living resources of the ocean and inland waters under the jurisdiction and influence of the State for the benefit of all the citizens of the State. In addition, it is the policy of this State to promote the development of local California fisheries in harmony with federal law respecting fishing and the conservation of the living resources of the ocean and inland waters under the jurisdiction and influence of the State. The objectives of this policy include, but are not limited to, the maintenance of sufficient populations of all species of aquatic organisms to ensure their continued existence and the maintenance of a sufficient resource to support a reasonable sport use. Adoption of scientifically-based Klamath River Basin salmon seasons, size limits, and bag and possession limits provides for the maintenance of sufficient populations of salmon to ensure their continued existence.

The benefits of the proposed regulations are conformance with federal law, sustainable management of Klamath River Basin fish resources, health and welfare of California residents and promotion of businesses that rely on sport salmon fishing in the Klamath River Basin.

Consistency and Compatibility with Existing Regulations

The proposed regulations are neither inconsistent nor incompatible with existing State regulations. The Legislature has delegated authority to the Commission to promulgate sport fishing regulations (Sections 200, 205, 315, and 316.5, Fish and Game Code). The Commission has reviewed its own regulations and finds that the proposed regulations are neither inconsistent nor incompatible with existing State regulations. Commission staff has searched the California Code of Regulations and has found no other State regulations related to sport fishing in the Klamath River Basin.

Regulatory Language

Subsection (b)(91.1) of Section 7.50. Alphabetical List of Waters with Special Fishing Regulations.

(91.1) Anadromous Waters of the Klamath River Basin Downstream of Iron Gate and Lewiston dams. The regulations in this subsection apply only to waters of the Klamath River Basin which are accessible to anadromous salmonids. They do not apply to waters of the Klamath River Basin which are inaccessible to anadromous salmon and trout, portions of the Klamath River system upstream of Iron Gate Dam, portions of the Trinity River system upstream of Lewiston Dam, and the Shasta River and tributaries upstream of Dwinnel Dam. Fishing in these waters is governed by the General Regulations for non-anadromous waters of the North Coast District (see Section subsection 7.00(a)(4)).

(A) Hook and Weight Restrictions.

1. Only barbless hooks may be used. (For definitions regarding legal hook types, hook gaps and rigging see Chapter 2, Article 1, Section 2.10.)
2. During closures to the take of adult salmon, it shall be unlawful to remove any adult Chinook Salmon from the water by any means.

(B) General Area Closures.

1. No fishing is allowed within 750 feet of any Department of Fish and Wildlife fish-counting weir.
2. No fishing is allowed from the Ishi Pishi Road bridge upstream to and including Ishi Pishi Falls from August 15 through December 31. EXCEPTION: members of the Karuk Indian Tribe listed on the current Karuk Tribal Roll may fish at Ishi Pishi Falls using hand-held dip nets.
3. No fishing is allowed from September 15 through December 31 in the Klamath River within 500 feet of the mouths of the Salmon, the Shasta and the Scott rivers and Blue Creek.
4. No fishing is allowed from June 15 through September 14 in the Klamath River from 500 feet above the mouth of Blue Creek to 500 feet downstream of the mouth of Blue Creek.

(C) Klamath River Basin Possession Limits.

1. Trout Possession Limits.

- a. The Brown Trout possession limit is 10.
- b. The hatchery trout or hatchery steelhead possession limits are as follows:
 - (i) Klamath River - 4 hatchery trout or hatchery steelhead.
 - (ii) Trinity River - 4 hatchery trout or hatchery steelhead.

2. Chinook Salmon Possession Limits.

- a. Klamath River downstream of the Highway 96 bridge at Weitchpec from January 1 to August 14 and the Trinity River downstream of the Old Lewiston Bridge to the confluence of the South Fork Trinity River from January 1 to August 31: 2 Chinook Salmon.
- b. Klamath River from August 15 to December 31 and Trinity River from September 1 to December 31: ~~Closed to salmon fishing. No take or possession of Chinook Salmon.~~[0-12] Chinook Salmon. No more than [0-4] Chinook Salmon over 22 inches total length may be

retained when the take of salmon over 22 inches total length is allowed.

(D) Klamath River Basin Chinook Salmon Quotas.

The Klamath River fall-run Chinook Salmon take is regulated using quotas. Accounting of the tribal and non-tribal harvest is closely monitored from August 15 through December 31 each year. These quota areas are noted in subsection (b)(91.1)(E) with "Fall Run Quota" in the *Open Season and Special Regulations* column.

1. Quota for Entire Basin.

The ~~2017~~2018 Klamath River Basin quota is ~~0~~[0-67,600] Klamath River fall-run Chinook Salmon over 22 inches total length. The department shall inform the Commission, and the public via the news media, prior to any implementation of restrictions triggered by the quotas. All fishing for Klamath River fall-run Chinook Salmon is prohibited. (NOTE: A department status report on progress toward the quotas for the various river sections is updated weekly, and available at 1-800-564-6479.)

2. Subquota Percentages.

a. The subquota for the Klamath River upstream of the Highway 96 bridge at Weitchpec and the Trinity River is 50% of the total Klamath River Basin quota.

(i) The subquota for the Klamath River from 3,500 feet downstream of the Iron Gate Dam to the Highway 96 bridge at Weitchpec is 17% of the total Klamath River Basin quota.

(ii) The subquota for the Trinity River main stem downstream of the Old Lewiston Bridge to the Highway 299 West bridge at Cedar Flat is 16.5% of the total Klamath River Basin quota.

(iii) The subquota for the Trinity River main stem downstream of the Denny Road bridge at Hawkins Bar to the confluence with the Klamath River is 16.5% of the total Klamath River Basin quota.

b. The subquota for the lower Klamath River downstream of the Highway 96 bridge at Weitchpec is 50% of the total Klamath River Basin quota.

(i) The Spit Area (within 100 yards of the channel through the sand spit formed at the Klamath River mouth) ~~is closed to all fishing from August 15, 2017 to December 31, 2017.~~will close when 15% of the total Klamath River Basin quota is taken downstream of the Highway 101 bridge.

(E) Klamath River Basin Open Seasons and Bag Limits.

All anadromous waters of the Klamath River Basin are closed to all fishing for all year except those areas listed in the following table. Bag limits are for trout and Chinook Salmon in combination unless otherwise specified.

<i>Body of Water</i>	<i>Open Season and Special Regulations</i>	<i>Daily Bag Limit</i>
1. Bogus Creek and tributaries.	Fourth Saturday in May through August 31. Only artificial lures with barbless hooks may be used.	2 hatchery trout or hatchery steelhead**

2. Klamath River main stem from 3,500 feet downstream of Iron Gate Dam to the mouth.		
a. Klamath River from 3,500 feet downstream of the Iron Gate Dam to the Highway 96 bridge at Weitchpec.	January 1 to August 14	0 Chinook Salmon 2 hatchery trout or hatchery steelhead**
	Fall Run Quota 0[0-11,492] Chinook Salmon August 15 to December 31, 20172018.	Closed to salmon fishing. No take of Chinook Salmon. [0-4] Chinook Salmon – no more than [0-4] fish over 22 inches total length until subquota is met, then 0 fish over 22 inches total length. 2 hatchery trout or hatchery steelhead**
	<u>Fall Run Quota Exception: Chinook Salmon over 22 inches total length may be retained from 3,500 feet downstream of Iron Gate Dam to the Interstate 5 bridge when the department determines that the adult fall-run Chinook Salmon spawning escapement at Iron Gate Hatchery exceeds 8,000 fish. Daily bag and possession limits specified for fall-run Chinook Salmon apply during this exception.</u>	
b. Klamath River downstream of the Highway 96 bridge at Weitchpec.	January 1 to August 14.	2 Chinook Salmon 2 hatchery trout or hatchery steelhead**
	Fall Run Quota 0[0-33,800] Chinook Salmon August 15 to December 31, 20172018.	Closed to salmon fishing. No take of Chinook Salmon. [0-4] Chinook Salmon – no more than [0-4] fish over 22 inches total length until subquota is met, then 0 fish over 22 inches total length. 2 hatchery trout or hatchery steelhead**
	<u>Fall Run Quota Exception: Spit Area (within 100 yards of the channel through the sand spit formed at the Klamath River mouth). This area will be closed to all fishing after 15% of the Total Klamath River Basin Quota has been taken.</u> <u>All legally caught Chinook Salmon must be retained. Once the adult (greater than 22 inches) component of the total daily bag</u>	

	<u>limit has been retained anglers must cease fishing in the spit area.</u>	
3. Salmon River main stem, main stem of North Fork downstream of Sawyer's Bar bridge, and main stem of South Fork downstream of the confluence of the East Fork of the South Fork.	November 1 through February 28.	2 hatchery trout or hatchery steelhead**
4. Scott River main stem downstream of the Fort Jones-Greenview bridge to the confluence with the Klamath River.	Fourth Saturday in May through February 28.	2 hatchery trout or hatchery steelhead**
5. Shasta River main stem downstream of the Interstate 5 bridge north of Yreka to the confluence with the Klamath River.	Fourth Saturday in May through August 31 and November 16 through February 28.	2 hatchery trout or hatchery steelhead**
6. Trinity River and tributaries.		
a. Trinity River main stem from 250 feet downstream of Lewiston Dam to the Old Lewiston Bridge.	April 1 through September 15. Only artificial flies with barbless hooks may be used.	2 hatchery trout or hatchery steelhead**
b. Trinity River main stem downstream of the Old Lewiston Bridge to the Highway 299 West bridge at Cedar Flat.	January 1 to August 31.	2 Chinook Salmon 5 Brown Trout 2 hatchery trout or hatchery steelhead**
	Fall Run Quota 0[0-11,154] Chinook Salmon September 1 through	Closed to salmon fishing. No take of Chinook Salmon. [0-4] Chinook Salmon – no more than

	December 31, 2017 2018.	<u>[0-4] fish over 22 inches total length until subquota is met, then 0 fish over 22 inches total length.</u> 5 Brown Trout 2 hatchery trout or hatchery steelhead**
	<u>Fall Run Quota Exception: Chinook Salmon over 22 inches total length may be retained downstream of the Old Lewiston Bridge to the mouth of Indian Creek when the department determines that the adult fall-run Chinook Salmon spawning escapement at Trinity River Hatchery exceeds 4,800 fish. Daily bag and possession limits specified for fall-run Chinook Salmon apply during this exception.</u>
