

THE AMERICAN BULLFROG

FUN FACTS:

1. Adult bullfrogs can leap about three feet, they are also able to jump up to six feet without a problem.
2. Frogs can lay hundreds of eggs at one time.
3. Frogs can breathe and smell through their skin.
4. Bullfrogs live in fresh water.
5. Bullfrogs have strong and long legs
6. Frogs have very long and sticky tongues.
7. Bullfrogs grow depending on their enclosure size.

Solutions to Stop Spreading Invasive Species.

- Be careful when driving off road in vehicles.
- You should clean your car tires before and after going in the wild.
- Keep boats and watercraft clean between uses.
- Do not release non-native species into any habitats.
- Don't purchase or rehome invasive and illegal species.

THE AMERICAN BULLFROG

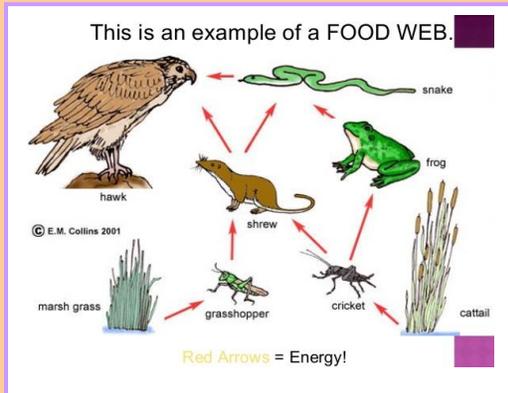

Warning!

Adorable Invasive
Species!

DANGERS OF INVASIVE NON-NATIVE SPECIES:

- Bullfrogs will eat about anything causing other animals, reptiles or insects to starve and die.
- Bullfrogs breed fast and take over areas.
- They can also change conditions, such as changing soil with urine leading to wild fires.
- The American Bullfrogs eat the pacific tree frogs and all of their food.
- They can change the food web, which causes sickness.

WHAT TO DO IF YOU FIND A NON-NATIVE SPECIES:

Please report non-native creatures in the Los Angeles area. If you find a non-native bullfrog, call Animal Control at (310)618-3850.

NEW INFORMATION ABOUT BULLFROG WELFARE:

There is a newly discovered fungal disease called Chytrid that kills frogs. If you touch one frog that has Chytrid and then touch another frog, it will spread the disease to the next frog. Chytrid is a fatal disease and threatens the entire frog population.

You can find out more information about Frog Chytrid from this website:
<http://www.amphibianark.org/the-crisis/chytrid-fungus/#WhatIsBd>
