

EPIMS Permitting Portal

The Department of Fish and Wildlife (CDFW) has a new Environmental Permit Information Management System (EPIMS). EPIMS Permitting Portal enables applicants to complete a Lake and Streambed Alteration (LSA) notification and submit online. Notifications submitted through the portal allow for a paperless permit process by facilitating uploads of supplemental documentation (i.e., plans, diagrams, maps, photos, studies), calculation of permit fees, electronic signatures, email alerts, and applicant tracking of permit progress.

Going Green

Removing paper forms is a big step in CDFW going paperless.

Streamlining

Delays associated with paper applications are removed.
