Section 1: Overview
Date: 3/8/2022

Life Stages Present:
Winter-run Chinook salmon (juvenile)
Spring-run Chinook salmon (juvenile)
Spring-run Chinook salmon (adult)
Winter-run Chinook salmon (adult)

Advice to the Water Operations Management Team (WOMT):
No advice is warranted.

For the week beginning March 8, 2022, D-1641 Delta Outflow is controlling exports at the Central Valley Project (CVP) and the State Water Project (SWP). Combined exports on 3/8/2022 are 1,600 cfs resulting in an Old and Middle River Index (OMRI) of -1,200 cfs and 10.3% of inflow diverted (14-day average). These projected OMRI values are more positive than what would be required if the SWP Incidental Take Permit Conditions of Approval (COA) thresholds were to be exceeded. The Delta Cross Channel (DCC) gates remain closed for seasonal requirement consistent with D-1641 and the CVP Proposed Action. The SWP is exporting this week and no outages are planned.

The distribution of the juvenile natural origin winter-run (WR) Chinook salmon population estimated to be in the Delta in conjunction with flows forecasted at Freeport, CVP and SWP exports, and OMRI flows, result in an overall risk of entrainment into the central and south Delta from the Sacramento River consistent with the previous week and estimated to remain medium. Based on monitoring data, hydrological conditions, and seasonal timing, the Salmon Monitoring Team (SaMT) estimates an overall medium risk of entrainment into the interior Delta from the Sacramento River for young-of-year spring-run (SR) Chinook salmon which is consistent with the previous week.

SaMT considers the overall entrainment risk of WR into the salvage facilities to remain low this week. SaMT does not anticipate COA 8.6.3 (Mid and Late Season Natural WR Chinook Salmon Daily Loss Threshold) to be triggered. OMRI values are more positive than what is required if a COA threshold is exceeded; therefore, if COA 8.6.3 was exceeded there would be no action taken to restrict OMR further. SaMT considers the potential for SR entrainment into the export facilities to be low this week due to no salvage of SR reported for WY 2022 and projected OMRI values.

*Due to very low numbers of WR being seen in real-time monitoring, this distribution is based mostly on historical timing.

Risk Assessment:

Section 1-A: Sacramento River and Confluence

Assessment of risk of entrainment into the central Delta for WR and SR in the Sacramento River: (8.1.5.1 C ii, iii, iv and 8.1.5.1 B iii)

- **Exposure Risk:**
  - WR: High
  - SR: High

- **Routing Risk:**
  - WR: Low
  - SR: Low

- **Overall Entrainment Risk:**
  - WR: Medium
  - SR: Medium

- Change in risk of entrainment into the central Delta (increased/decreased risk compared to last week):
  - WR: Similar to the previous week
    - Routing Risk and Exposure Risk remain similar to the previous week. The STARS model predicts routing probability into Georgiana Slough and Sutter and Steamboat sloughs to be similar to last week. Freeport flows are also similar to last week and the majority of WR are estimated to have reached the Delta. Therefore, overall risk of entrainment of WR into the central Delta remains consistent with the previous week and is considered medium.
  - SR: Similar to the previous week
    - Routing Risk and Exposure Risk remain similar to the previous week. The majority of SR are estimated to be in the Delta and Freeport flows remain similar to last week. Therefore, the overall entrainment into the central Delta remains consistent with the previous week and is considered medium.

Section 1-B: Facilities Risk

Central Valley Project/State Water Project (CVP/SWP) facilities entrainment risk for WR and SR in the central Delta over the next week (8.1.5.1 D iii, iv, v)

- **Exposure Risk:**
  - WR: Low
  - SR: Low

- Reporting OMR/Export Risk:
Baseline OMR (-1,200 cfs)
  - WR: Low
  - SR: Low

Scenario 1 OMR: (-500 cfs)
  - WR: Low
  - SR: Low

Scenario 2 OMR: (-3,000 cfs)
  - WR: Low
  - SR: Low

- Overall Entrainment Risk:
  - WR: Low
  - SR: Low

- Change in risk of entrainment into the facilities (increased/decreased risk compared to last week):
  - WR: Consistent with the previous week
    - Reporting OMR/Export Risk and Exposure Risk remain similar to the previous week due to exports being restricted. No WR were caught in salvage during the previous week. Therefore, the overall entrainment risk into the facilities remains consistent with the previous week and is considered low.
  - SR: Consistent with the previous week
    - Reporting OMR/Export Risk and Exposure Risk remains similar to the previous week. OMRI values are more positive than expected at this time because of Delta Outflow requirements. No SR have been caught in salvage for WY 2022. Therefore, the overall entrainment risk remains consistent with the previous week and is considered low.

Section 1-C: Annual Loss Threshold Risk

- Annual loss threshold risk and Alternative Actions (8.1.5.1. E I, ii, iii and 8.1.5.1 F I, ii)
  - Loss at the SWP and CVP facilities compared to the estimated remaining population in the Delta and upstream of the Delta: Salvage of California Endangered Species Act (CESA)-listed Chinook salmon has not occurred over the past week.
  - Define risk of hitting a threshold, 50%, or 75%, or 100%, and likelihood of exceeding a threshold:
    - Natural origin WR: 1,462.94 [1.17% of the 125,038 natural-origin WR Juvenile Production Estimate (JPE)]
      - Current Annual Loss: 20.56
      - 50% Threshold based on natural WR JPE: 731.47
        - Risk of exceeding threshold: Low
      - 75% Threshold based on natural WR JPE: 1,097.21
        - Risk of exceeding threshold: Low
      - 100% Threshold based on natural WR JPE: 1,462.94
        - Risk of exceeding threshold: Low
    - Hatchery WR: 181.85 [0.12% of the 151,544 Livingston Stone National Fish Hatchery (LSNFH) hatchery release JPE]
      - Current Annual Loss: 0
      - 50% Threshold based on hatchery WR JPE: 90.93
        - Risk of exceeding threshold: Low
      - 75% Threshold based on hatchery WR JPE: 136.39
Section 1-D: Daily Loss Threshold Risk

- Daily loss threshold risk and Alternative Actions
  - Loss at the SWP and CVP facilities compared to estimated remaining population in Delta and upstream of the Delta:
    - Daily loss thresholds and subsequent loss and associated operations:
      - **COA 8.6.3: Mid and Late Season Natural WR Chinook Salmon Daily Loss Threshold**
        - January 1 - January 31: 0.0000635 * 125,038 = 7.94
        - February 1 - February 28: 0.0000991 * 125,038 = 12.39
        - March 1 – March 31: 0.000146 * 125,038 = 18.26
        - April 1 – April 30: 0.0000507 * 125,038 = 6.34
        - May 1 – May 31: 0.000077 * 125,038 = 9.63
      - Highest daily loss: 3.52
        - Risk of exceeding threshold: Low

- **COA 8.6.4 Daily SR Hatchery Surrogate Loss Threshold**
  - Hatchery Origin Young-of-Year SR Surrogates Highest Daily Loss: NA
    - Risk of exceeding threshold: NA
  - Hatchery Origin Young-of-Year FR Surrogates Highest Daily Loss: NA
    - Risk of exceeding threshold: NA

Section 2: Basis for Advice

The 2020 [Incidental Take Permit for Long-Term Operation of the State Water Project in the Sacramento-San Joaquin Delta 2081-2019-066-00](https://www.fws.gov/marin/lechris/Incidental_Take_Permits.html) (SWP ITP) states that advice to Water Operations Management Team (WOMT) shall be consistent with the Project Description, COA in the ITP, and the applicable ESA authorizations. This week's advice is based on the following COAs which are currently applicable:

List relevant COA number and title based on species/life stage, time of year, etc.:

8.1.4 **Collaborative Approach to Real-time Risk Assessment.** Beginning no later than October 1 through the end of OMR Management (see Condition of Approval 8.8) the Smelt and Salmon Monitoring Teams shall meet weekly, or more often as required, to consider survey data, salvage data, and other pertinent biotic and abiotic factors and prepare risk assessments as described in Conditions of Approval 8.1.1, 8.1.2, 8.1.5.1 and 8.1.5.2.

The Smelt and Salmon Monitoring Teams shall prepare operations advice for the WOMT as required by Conditions of Approval 8.3.1, 8.3.3, 8.4.1, 8.4.2, 8.5.1, 8.5.2, 8.6.1, 8.6.2, 8.6.3, 8.6.4, 8.7, and 8.8, including advice on operations. The Smelt and Salmon Monitoring Teams shall each prepare risk assessments and operations advice. Within each team, staff jointly develop the risk assessment and supporting documentation to accompany operations advice (see Conditions of Approval 8.1.5.1 and 8.1.5.2). DWR and CDFW Smelt and Salmon Monitoring Team staff may conclude different operations advice is warranted, in which case the difference shall be noted and elevated as described in this Condition of Approval.

The Smelt and Salmon Monitoring Teams shall communicate their advice to WOMT. The WOMT shall then confer and attempt to reach a resolution and agreed-upon Project operations. If a resolution is reached, Permittee shall operate consistent with the decision regarding Project operations from WOMT. If the WOMT...
does not reach a resolution, the CDFW Director may require Permittee to implement an operational recommendation provided by CDFW. CDFW will provide its operational decision to Permittee in writing. Permittee shall implement the operational decision required by CDFW. Permittee shall ensure that its proportional share (see Condition of Approval 8.10) of the OMR flow requirement as a part of the operational decision is satisfied.

8.1.5 Real-time Risk Assessments. The Smelt and Salmon Monitoring Teams (Conditions of Approval 8.1.1 and 8.1.2) shall prepare weekly risk assessments, or more often as required, and operations advice (as required by Conditions of Approval 8.3.1, 8.3.3, 8.4.1, 8.4.2, 8.5.1, 8.5.2, 8.6.1, 8.6.2, 8.6.3, 8.6.4, and 8.7) during their discussions and analyses. The Smelt and Salmon Monitoring Teams shall provide the risk assessments and pertinent supporting information to the WOMT (Condition of Approval 8.1.3) within one business day of each meeting.

8.3.2 Salmonid Presence. After January 1 each year, if Conditions of Approval 8.3.1 or 8.3.3 have not already been triggered, the OMR Management season shall begin when the Salmon Monitoring Team first estimates that 5% of the CHNWR or CHNSR population is in the Delta whichever is sooner. Upon initiation of the OMR Management season, Permittee shall reduce exports to achieve, and shall maintain a 14-day average OMR index no more negative than -5,000 cfs, until the OMR Management season ends (see Condition of Approval 8.8). In the event that a salmon daily or single-year loss threshold is exceeded (Conditions of Approval 8.6.1, 8.6.2, 8.6.3, or 8.6.4) prior to the start of OMR Management season the requirements in those Conditions shall control operations.

8.6.1 Winter-run Single-year Loss Threshold. In each year, Permittee shall, in coordination with Reclamation, operate the Project to avoid exceeding the following single-year loss thresholds:

- **Natural WR** (loss = 1.17% of natural WR JPE)
- **Hatchery WR** (loss = 0.12% of hatchery WR JPE)

The loss threshold and loss tracking for hatchery WR does not include releases into Battle Creek.

Loss of WR at the CVP and SWP salvage facilities shall be calculated based on LAD criteria for run assignment.

Annual loss of natural and hatchery WR at the CVP and SWP salvage facilities shall be counted cumulatively beginning November 1 each calendar year through June 30 the following calendar year.

WR shall be identified based on the Delta Model LAD criteria. Loss shall be calculated for the South Delta Export Facilities using the 2018 CDFW loss equation (Attachment 6).

During the water year, if cumulative loss of natural or hatchery WR exceeds 50% of the annual loss threshold, Permittee shall restrict south Delta exports to maintain a 14-day average OMR index no more negative than -3,500 cfs through the end of OMR Management (see Condition of Approval 8.8). After 14 days of operations to maintain an OMR index no more negative than -3,500 cfs, Permittee may convene the Salmon Monitoring Team to conduct a risk assessment (Condition of Approval 8.1.5.1) and determine whether the risk of entainment and loss of natural and hatchery WR is no longer present. Risks shall be measured against the potential to exceed the next single-year loss threshold. The results of this risk assessment and associated OMR advice shall be provided to WOMT according to Condition of Approval 8.1.3 and the decision-making process shall follow the process described in Condition of Approval 8.1.4.

The -3,500 cfs OMR flow operational criteria, adjusted and informed by this risk assessment, shall remain in effect until the end of OMR Management (Condition of Approval 8.8).
During the water year, if cumulative loss of natural or hatchery WR at the CVP and SWP salvage facilities exceeds 75% of the single-year loss threshold, Permittee shall restrict OMR to a 14-day moving average OMR flow index that is no more negative than -2,500 cfs through the end of OMR Management (Condition of Approval 8.7). After 14 days Permittee may convene the Salmon Monitoring Team to conduct a risk assessment (Condition of Approval 8.1.5.1) and determine whether the risk of entrainment and take of natural and hatchery WR is no longer present. The results of this risk assessment and associated OMR advice shall be provided to WOMT according to Condition of Approval 8.1.3 and the decision-making process shall follow the process described in Condition of Approval 8.1.4.

The -2,500 cfs OMR flow operational criteria adjusted and informed by this risk assessment shall remain in effect until the end of OMR Management (Condition of Approval 8.8).

During the water year, if natural or hatchery WR cumulative loss at the CVP and SWP salvage facilities exceeds the single-year loss threshold, Permittee shall immediately convene the Salmon Monitoring Team to review recent fish distribution information and operations and provide advice regarding future planned Project operations to minimize subsequent loss during that year. The Salmon Monitoring Team shall report the results of this review and advice to the WOMT (see Condition of Approval 8.1.3). Operational decisions shall be made following the process described in Condition of Approval 8.1.4 (Collaborative Real Time Risk Assessment).

If the single-year loss threshold is exceeded, Permittee and Reclamation shall also convene an independent panel to review Project operations and the single-year loss threshold prior to November 1, as described in Condition of Approval 8.2. The purpose of the independent panel is to review the actions and decisions contributing to the loss trajectory that lead to an exceedance of the single-year loss threshold, and make recommendations on modifications to Project implementation, or additional actions to be conducted to stay within the single-year loss threshold in subsequent years.

Permittee shall, in coordination with Reclamation, continue monitoring and reporting salvage at the CVP and SWP salvage facilities. Permittee and Reclamation shall continue the release and monitoring of yearling Coleman National Fish Hatchery (NFH) late fall-run and yearling SR surrogates. The Salmon Monitoring Team shall use reported real-time salvage counts along with qualitative and quantitative tools to inform risk assessments (see Condition of Approval 8.1.5.1).8.3.2 Salmonid Presence. After January 1 each year, if Conditions of Approval 8.3.1 or 8.3.3 have not already been triggered, the OMR Management season shall begin when the Salmon Monitoring Team first estimates that 5% of the CHNWR or CHNSR population is in the Delta whichever is sooner. Upon initiation of the OMR Management season, Permittee shall reduce exports to achieve, and shall maintain a 14-day average OMR index no more negative than -5,000 cfs, until the OMR Management season ends (see Condition of Approval 8.8). In the event that a salmon daily or single-year loss threshold is exceeded (Conditions of Approval 8.6.1, 8.6.2, 8.6.3, or 8.6.4) prior to the start of OMR Management season the requirements in those Conditions shall control operations.

8.6.3 Mid- and Late-season Natural Winter-run Chinook Salmon Daily Loss Threshold. To minimize entrainment, salvage, and take of natural CHNWR during the peak and end of their migration through the Delta. Permittee shall restrict south Delta exports for five days to achieve a five-day average OMR index no more negative than -3,500 cfs when daily loss of natural older juveniles at the SWP and CVP salvage facilities exceeds the following thresholds based on the JPE reported in January of the same calendar year:

- January 1 – January 31: 0.00635 % of the CHNWR JPE
• February 1 – February 28: 0.00991 % of the CHNWR JPE
• March 1 – March 31: 0.0146 % of the CHNWR JPE
• April 1 – April 30: 0.00507 % of the CHNWR JPE
• May 1 – May 31: 0.0077 % of the CHNWR JPE

8.6.4 Daily Spring-run Chinook Salmon Hatchery Surrogate Loss Threshold. To minimize entrainment of emigrating natural juvenile CHNSR from the Sacramento River and tributaries, including the Feather and Yuba rivers into the channels of the central Delta, south Delta, CCF, and the Banks Pumping Plant, Permittee shall restrict exports based on the presence of hatchery produced CHNSR surrogate groups at the CVP and SWP salvage facilities. CHNSR surrogate groups shall consist of all in-river fall- and spring-run surrogate release groups of Chinook salmon from the Coleman National Fish Hatchery, Feather River Hatchery, and the Nimbus Fish Hatchery.

Each water year between February 1 and June 30 Permittee shall reduce south Delta exports for five consecutive days to achieve a five-day average OMR index no more negative than -3,500 cfs when:

• Feather River Hatchery coded wire tagged (CWT) CHNSR surrogates (includes both spring- and fall-run hatchery release groups) cumulative loss at the at the CVP and SWP salvage facilities is greater than 0.25% for each release group, OR
• Coleman National Fish Hatchery and Nimbus Fish Hatchery CWT fall-run release groups cumulative loss at the at the CVP and SWP salvage facilities is greater than 0.25% of the total in-river releases for each release group.

This Condition of Approval may be modified through the process described in Condition of Approval 8.6.6 and an amendment to this ITP.

8.7 OMR Flexibility During Delta Excess Conditions. Permittee may increase exports to capture peak flows in the Delta during storm-related events (hereafter OMR flex) when:

• The Delta is in excess conditions, AND
• QWEST is greater than 0, AND
• A measurable precipitation event has occurred in the Central Valley, AND
• Permittee, in coordination with Reclamation, determines that Delta outflow index indicates a higher level of outflow available for diversion due to peak storm flows, AND
• None of the following Conditions of Approval are controlling Project operations: 8.3.1, 8.3.3, 8.4.1, 8.4.2, 8.5.1, 8.5.2, 8.6.1, 8.6.2, 8.6.3, and 8.6.4, AND
• Risk assessments conducted by the Salmon and Smelt Monitoring Teams (Conditions of Approval 8.1.5.1 and 8.1.5.2) Indicate that an OMR more negative than -5,000 cfs is not likely to trigger an additional real-time OMR restriction (Conditions of Approval 8.3.1, 8.3.3, 8.4.1, 8.4.2, 8.5.1, 8.5.2, 8.6.1, 8.6.2, 8.6.3, and 8.6.4), AND
• Cumulative salvage at the CVP and SWP facilities of yearling Coleman NFH late fall-run Chinook salmon (as yearling CHNSR surrogates) is less than 0.5% within any of the release groups, AND

• Risk assessments conducted by the Salmon and Smelt Monitoring Teams determines that no changes in spawning, rearing, foraging, sheltering, or migration behavior as a result of OMR Flex operations beyond those anticipated to occur through operations described in Conditions of Approval 8.3.1, 8.3.3, 8.4.1, 8.4.2, 8.5.1, 8.5.2, 8.6.1, 8.6.2, 8.6.3, and 8.6.4 are likely to occur.

If none of the restrictions listed above apply, Permittee may increase south Delta exports but shall manage Project operations to achieve a five-day average OMR index no more negative than -6,250 cfs. The decision to operate under this Condition of Approval shall be made following the process described in Condition of Approval 8.1.4 (Collaborative Real Time Risk Assessment), and SWP OMR flex is subject to approval by CDFW.

If, during OMR flex operations, any of the following conditions occurs, Permittee shall reduce south Delta exports to achieve a 14-day average OMR index no more negative than -5,000 cfs, unless a further reduction in exports is required by another Condition of Approval. The more positive OMR index shall be achieved within 48 hours of the occurrence of the condition, and the 14-day moving average shall apply from that point forward.

• Risk assessments conducted by the Salmon and Smelt Monitoring Teams (Conditions of Approval 8.1.5.1 and 8.5.1.2) indicate that an OMR more negative than -5,000 cfs is likely to trigger an additional real-time OMR restriction (Conditions of Approval 8.3.1, 8.3.3, 8.4.1, 8.4.2, 8.5.1, 8.5.2, 8.6.1, 8.6.2, 8.6.3, and 8.6.4), OR

• Cumulative salvage at the CVP and SWP facilities of yearling Coleman NFH late fall-run Chinook salmon (as yearling CHNSR surrogates) exceeds 0.5% within any of the release groups, OR

• A risk assessment conducted by the Salmon or Smelt Monitoring Teams identifies changes in spawning, rearing, foraging, sheltering, or migration behavior as a result of OMR Flex operations beyond those anticipated to occur through operations described in Conditions of Approval 8.3.1, 8.3.3, 8.4.1, 8.4.2, 8.5.1, 8.5.2, 8.6.1, 8.6.2, 8.6.3, and 8.6.4, OR

• Operational restrictions described in Conditions of Approval 8.3.1, 8.3.3, 8.4.1, 8.4.2, 8.5.1, 8.5.2, 8.6.1, 8.6.2, 8.6.3, 8.6.4, and 8.17 are required.
Section 3: Hydrology and Operations
Assessment of hydrologic, operational, and meteorological information. 8.1.5.1 A

Section 3-A: Water Operations, Water Operations Outlook, and Projected Conditions C 8.1.5.1 A. i, iii, iii:

- Antecedent Actions:
  - Water Temperature:
    - Mossdale (MSD): [https://cdec.water.ca.gov/dynamicapp/QueryDaily?s=MSD](https://cdec.water.ca.gov/dynamicapp/QueryDaily?s=MSD)
    - Number of days threshold exceeded: Not applicable until June.
    - Prisoners Point (PPT): [https://cdec.water.ca.gov/dynamicapp/QueryDaily?s=PPT&end=2021-01-20](https://cdec.water.ca.gov/dynamicapp/QueryDaily?s=PPT&end=2021-01-20)
    - Number of days threshold exceeded: Not applicable until June.
  - Tidal Cycle: *(Spring/Neap. Note if tidal cycle has potential to affect south Delta hydrology or X2)*
    - Strong neap cycle this week.
  - Turbidity: Not discussed
  - Salinity (X2): 73.7 km on 3/8/2022
  - Hydraulic Footprint *(Provide brief description of hydrologic footprint and summary of relevant DSM2 results)*: DSM2 results were conducted this week; however, there was only a single scenario modeled. There is no change to fish behavior with a lack of a 2nd (or 3rd) model to compare a baseline scenario to. Thus, the SaMT agreed discussing changes to fish behavior due to modeled conditions was not appropriate
  - Outages:
    - SWP: None projected
    - CVP: None projected.
    - SWP: 0 to 1,500 cfs
    - CVP: 800 to 1,800 cfs
  - Meteorological Forecast: “Dry weather with milder temperatures today. Another weather system will brush by to the east later Wednesday bringing a few showers to the northern Sierra. North to east winds return Thursday.” [https://www.wrh.noaa.gov/total_forecast/getprod.php?new&prod=XXXAFDSTO&wfo=sto](https://www.wrh.noaa.gov/total_forecast/getprod.php?new&prod=XXXAFDSTO&wfo=sto)
    - Storm Event Projection:
      - Dry Saturday as upper level ridge moves through. Threat of some light showers over the northern third of the CWA at that time. Drier conditions develop Sunday afternoon into early Monday as upper level ridging progresses through.
  - DCC Gates position: Closed on 11/30/2021 per D-1641 seasonal closure.
  - Sacramento River flow at Freeport: [https://cdec.water.ca.gov/dynamicapp/QueryDaily?s=FPT](https://cdec.water.ca.gov/dynamicapp/QueryDaily?s=FPT)
  - San Joaquin River flow at Vernalis:
    - [https://cdec.water.ca.gov/jspplot/jspPlotServlet.jsp?sensor_no=1689&end=&geom=&interval=&cookies=](https://cdec.water.ca.gov/jspplot/jspPlotServlet.jsp?sensor_no=1689&end=&geom=&interval=&cookies=)
    - [https://cdec.water.ca.gov/guidance_plots/VNS_gp.html](https://cdec.water.ca.gov/guidance_plots/VNS_gp.html)
  - QWEST: 1,900 cfs
    - QWEST will stay close to 2,000 cfs; however, later in the week (beginning 3/12/2022) QWEST may decrease because of the transition from operating Delta Outflow from Chipps Island to Collinsville.

Section 4: Distribution and Biology

8.1.5.1.B Assessment of biological information for WR and SR.

Section 4-A: WR Population Status 8.1.5.1.B i

- Adult escapement estimate:
  - Estimated spawning escapement for WR adults contributing to brood year (BY) 2021 is 10,269.

- Redd distribution and fry emergence timing:
  - WR fry presence is drawing to a close for BY 2021. Estimated juvenile WR passage at RBDD for 2/25/2022 is 572,042 fish, which represents 99.0% of historical passage.

- Juvenile production:
  - [https://www.fws.gov/redbluff/rbdd_biweekly_final.html](https://www.fws.gov/redbluff/rbdd_biweekly_final.html)

- Livingston Stone National Fish Hatchery releases:
  - See Table 4

- Distribution of natural WR:
  - See Table 1

- Distribution of Livingston Stone National Fish Hatchery Sacramento River WR and Battle Creek WR:
  - A release of 123,975 BY 2021 winter-run Chinook salmon occurred on 2/9/2022 and a release of 396,310 BY 2021 winter-run Chinook salmon occurred on 3/2/2022 in the Sacramento River at Caldwell Park Boat Ramp. A subset of 569 total fish were acoustically tagged and a small number of them have been detected at Butte City Bridge in the Sacramento River. A few of these acoustic tagged fish have been caught in the Lower Sacramento RST and acoustically detected downstream of the confluence at Tower Bridge and I-80 receivers and past Georgiana Slough. [https://oceanview.pfeg.noaa.gov/CalFishTrack/pageLSWR_2022.html](https://oceanview.pfeg.noaa.gov/CalFishTrack/pageLSWR_2022.html)

Section 4-B: SR Population Status 8.1.5.1.B ii

- Adult escapement estimate: Not available.

- Redd distribution and fry emergence timing:
  - Juvenile SR fry are present and migrating downstream to rear. SR juvenile passage has slowed at RBDD.

- Hatchery release (in-river and downstream):
  - See Table 4

- Distribution of natural SR:
  - See Table 1.

- Distribution of Feather River Fish Hatchery SR:
  - Releases have not occurred.

Section 4-C: Additional Data Sources to Assess Sensitivity to Entrainment into the Central and South Delta

8.1.5.1.C & D

- Acoustic telemetry: *Summary of acoustic telemetry tracking*
