

## Greater sage-grouse lek count trends for northern California (Lassen County) and the Bi-State Distinct Population Segment (Mono County)

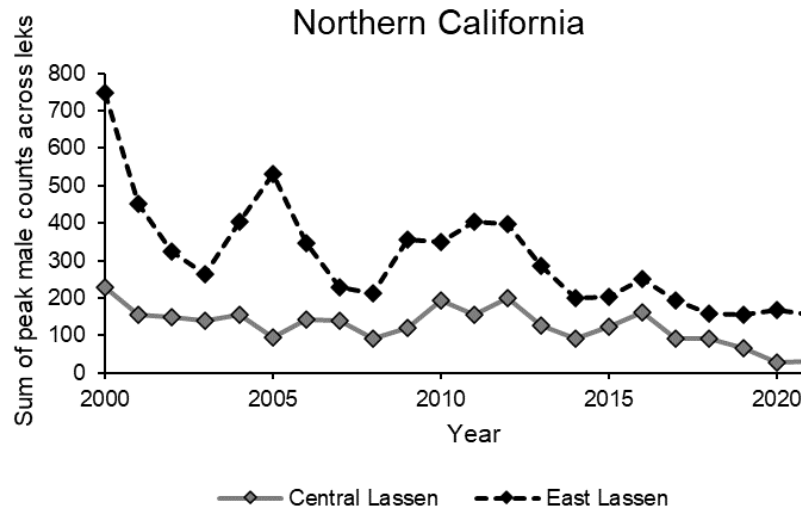

Figure 1: Sum of peak males per lek for the hunt zones in the northern California population of greater sage-grouse. Central Lassen (solid line) has declined from a recent peak of 199 males per lek in 2012 to 38 males per lek in 2022. East Lassen (dashed line) has declined from a peak of 404 males per lek in 2011 to 130 males per lek in 2022.

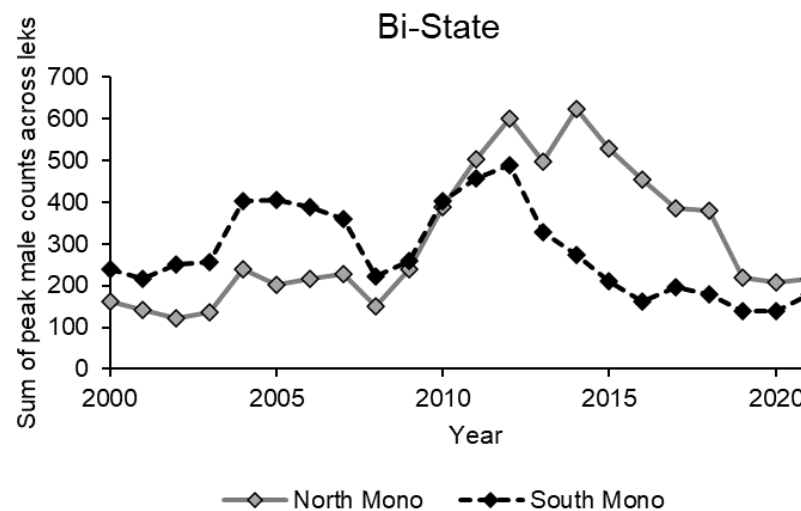

Figure 2: Sum of peak males per lek for the hunt zones in the Bi-State population of greater sage-grouse in California. North Mono (solid line) has declined from a recent peak of 624 males per lek in 2014 to 341 males per lek in 2022. South Mono (dashed line) has declined from a peak of 487 males per lek in 2012 to 174 males per lek in 2022.
