Contents

TREE OVERSTORY VEGETATION	1
Acer macrophyllum – Alnus rubra Forest & Woodland Alliance	1
Acer macrophyllum / (<i>Rubus ursinus</i>) Association	5
Acer macrophyllum – <i>Pseudotsuga menziesii</i> / <i>Polystichum munitum</i> Association	7
Alnus rubra / <i>Rubus spectabilis</i> – <i>Sambucus racemosa</i> Association.....	9
Alnus rubra / <i>Salix lasiolepis</i> – <i>Rubus</i> spp. Association	12
Umbellularia californica – Acer macrophyllum Association.....	14
Acer negundo Forest & Woodland Alliance	16
Acer negundo / (<i>Rubus ursinus</i>) Association	19
Aesculus californica Forest & Woodland Alliance.....	20
Aesculus californica – Umbellularia californica Association.....	24
Aesculus californica / <i>Toxicodendron diversilobum</i> / Moss Association	26
Alnus rhombifolia Forest & Woodland Alliance.....	28
Alnus rhombifolia / <i>Carex (nudata)</i> Association	31
Alnus rhombifolia – Umbellularia californica – (<i>Quercus chrysolepis</i>) Association	33
Arbutus menziesii Forest Alliance	35
Arbutus menziesii – (<i>Quercus agrifolia</i>) Association	38
Arbutus menziesii – Umbellularia californica Association	40
Eucalyptus spp. – Ailanthus altissima – Robinia pseudoacacia Woodland Semi-Natural Alliance	42
Acacia melanoxylon Provisional Semi-natural Association.....	45
Eucalyptus (<i>globulus</i> , <i>camaldulensis</i>) Provisional Semi-natural Association	47
Hesperocyparis (pigmaea, abramsiana, macrocarpa, goveniana) Woodland Alliance.....	49
Hesperocyparis abramsiana / <i>Arctostaphylos (crustacea, silvicola)</i> Provisional Association	52
Hesperocyparis macrocarpa – Pinus radiata Woodland Semi-Natural Alliance.	53
Hesperocyparis macrocarpa Ruderal Provisional Semi-natural Association	56
Pinus radiata plantations Provisional Semi-natural Association	58
Notholithocarpus densiflorus Forest Alliance	60
Notholithocarpus densiflorus – Arbutus menziesii Association	63
Notholithocarpus densiflorus / <i>Vaccinium ovatum</i> Association	65
Pinus attenuata Forest & Woodland Alliance.....	67
Pinus attenuata / <i>Arctostaphylos (crustacea)</i> Provisional Association	70
Pinus muricata – Pinus radiata Forest & Woodland Alliance	72
Pinus radiata / <i>Toxicodendron diversilobum</i> Association.....	74
Platanus racemosa – Quercus agrifolia Woodland Alliance	75
Quercus agrifolia / <i>Salix lasiolepis</i> Association	78
Populus fremontii – Fraxinus velutina – Salix gooddingii Forest & Woodland Alliance.....	80
Populus fremontii / <i>Baccharis salicifolia</i> Association	82
Populus trichocarpa Forest & Woodland Alliance.....	83
Populus trichocarpa / <i>Cornus sericea</i> / <i>Carex obnupta</i> Provisional Association	86

Pseudotsuga menziesii – (Notholithocarpus densiflorus – Arbutus menziesii) Forest & Woodland Alliance	87
Pseudotsuga menziesii – (Umbellularia californica) / Frangula californica Association	90
Pseudotsuga menziesii – Arbutus menziesii Association	92
Pseudotsuga menziesii – Chrysolepis chrysophylla – Notholithocarpus densiflorus Association	94
Pseudotsuga menziesii – Notholithocarpus densiflorus / Vaccinium ovatum Association	96
Pseudotsuga menziesii – Quercus agrifolia Association	98
Pseudotsuga menziesii – Quercus chrysolepis Association	100
Pseudotsuga menziesii – Umbellularia californica / (Toxicodendron diversilobum) Association	102
Pseudotsuga menziesii – Umbellularia californica / Polystichum munitum Association.....	105
Pseudotsuga menziesii / (Toxicodendron diversilobum) Association.....	108
Pseudotsuga menziesii / Baccharis pilularis Association.....	110
Pseudotsuga menziesii / Corylus cornuta / Polystichum munitum Association	112
Quercus (agrifolia, douglasii, garryana, kelloggii, lobata, wislizeni) Forest & Woodland Alliance	114
Quercus douglasii – Quercus lobata – Quercus agrifolia / Toxicodendron diversilobum Association	117
Quercus agrifolia Forest & Woodland Alliance	118
Quercus agrifolia – Arbutus menziesii – Umbellularia californica Association.....	121
Quercus agrifolia – Arbutus menziesii / Corylus cornuta – Rubus spp. Association.....	124
Quercus agrifolia – Quercus kelloggii Association	126
Quercus agrifolia / Arctostaphylos (crustacea) Provisional Association	128
Quercus agrifolia / grass Association.....	130
Quercus agrifolia / Toxicodendron diversilobum Association.....	132
Quercus chrysolepis (tree) Forest & Woodland Alliance	134
Quercus chrysolepis – Umbellularia californica Association	138
Quercus chrysolepis / Quercus (wislizeni, parvula) Association	141
Quercus chrysolepis Association	144
Quercus douglasii Forest & Woodland Alliance	146
Quercus douglasii – Quercus agrifolia Association	150
Quercus douglasii / Mixed herbaceous Association	153
Quercus kelloggii Forest & Woodland Alliance	155
Quercus kelloggii – Arbutus menziesii – Quercus agrifolia Association	158
Quercus lobata Forest & Woodland Alliance	160
Quercus lobata / grass Association	163
Quercus wislizeni – Quercus parvula (tree) Forest & Woodland Alliance	166
Quercus (parvula, wislizeni) – Arbutus menziesii / Toxicodendron diversilobum Association	170
Salix gooddingii – Salix laevigata Forest & Woodland Alliance	173
Salix laevigata / (Cornus sericea – Ribes spp.) / Scirpus microcarpus – Carex spp. Association	177

<i>Salix laevigata</i> / <i>Salix lasiolepis</i> Association	179
Salix lucida ssp. <i>lasiandra</i> Forest & Woodland Alliance.....	182
<i>Salix lucida</i> ssp. <i>lasiandra</i> Association	184
Schinus (molle, terebinthifolius) – Myoporum laetum Woodland Semi-Natural Alliance	185
Sequoia sempervirens Forest & Woodland Alliance	188
Sequoia sempervirens – <i>Acer macrophyllum</i> – <i>Umbellularia californica</i> Association	191
Sequoia sempervirens – <i>Arbutus menziesii</i> / <i>Vaccinium ovatum</i> Association	194
Sequoia sempervirens – <i>Chrysolepis chrysophylla</i> / <i>Arctostaphylos glandulosa</i> Association	196
Sequoia sempervirens – <i>Notholithocarpus densiflorus</i> / <i>Vaccinium ovatum</i> Association	198
Sequoia sempervirens – <i>Pseudotsuga menziesii</i> – <i>Notholithocarpus densiflorus</i> Association	200
Sequoia sempervirens – <i>Pseudotsuga menziesii</i> – <i>Umbellularia californica</i> Association ...	202
Sequoia sempervirens – <i>Umbellularia californica</i> Association.....	204
Sequoia sempervirens / (<i>Pteridium aquilinum</i>) – <i>Woodwardia fimbriata</i> Association	206
Sequoia sempervirens / <i>Polystichum munitum</i> Association.....	209
Umbellularia californica Forest & Woodland Alliance	211
<i>Umbellularia californica</i> Association	214
<i>Umbellularia californica</i> – <i>Quercus agrifolia</i> / <i>Toxicodendron diversilobum</i> Association....	216
<i>Umbellularia californica</i> / <i>Polystichum munitum</i> Association	218
SHRUB-OVERSTORY VEGETATION	220
Acacia spp. – Grevillea spp. – Leptospermum laevigatum Shrubland Provisional Semi-Natural Alliance	220
Acacia (cyclops, dealbata) Provisional Semi-natural Association	223
Adenostoma fasciculatum Shrubland Alliance	225
Adenostoma fasciculatum Association.....	228
Adenostoma fasciculatum – <i>Diplacus aurantiacus</i> Association	230
Arctostaphylos (crustacea, tomentosa) Shrubland Alliance	232
<i>Arctostaphylos crustacea</i> Association	235
<i>Arctostaphylos crustacea</i> – <i>Adenostoma fasciculatum</i> – <i>Ceanothus (cuneatus, papillosum)</i> Association	237
Arctostaphylos (nummularia, sensitiva) – Chrysolepis chrysophylla Shrubland Alliance	239
<i>Arctostaphylos montaraensis</i> – <i>Arctostaphylos imbricata</i> Provisional Association	242
<i>Arctostaphylos sensitiva</i> Association	244
<i>Chrysolepis chrysophylla</i> / <i>Vaccinium ovatum</i> Association	246
Artemisia californica – (Salvia leucophylla) Shrubland Alliance	248
<i>Artemisia californica</i> Association	251
<i>Artemisia californica</i> – <i>Diplacus aurantiacus</i> Association	253
<i>Artemisia californica</i> / <i>Nassella (pulchra)</i> Association	255
Baccharis pilularis Shrubland Alliance	257
<i>Baccharis pilularis</i> Association	261

Baccharis pilularis – (<i>Frangula californica</i>) – <i>Rubus</i> spp. Association	263
Baccharis pilularis – <i>Artemisia californica</i> Association	266
Baccharis pilularis – <i>Ceanothus thyrsiflorus</i> Association.....	268
Baccharis pilularis – <i>Toxicodendron diversilobum</i> Association.....	270
Baccharis pilularis / (<i>Nassella pulchra</i> – <i>Elymus glaucus</i> – <i>Bromus carinatus</i>) Association	272
Baccharis pilularis / Annual grass – herb Association	275
Baccharis pilularis / <i>Carex obnupta</i> – <i>Juncus patens</i> Provisional Association	278
Baccharis pilularis / <i>Danthonia californica</i> Association.....	281
Baccharis pilularis / <i>Eriophyllum staechadifolium</i> Association	284
<i>Frangula californica</i> ssp. <i>californica</i> – Baccharis pilularis / <i>Scrophularia californica</i> Association	287
<i>Garrya elliptica</i> Provisional Association	289
Ceanothus cuneatus Shrubland Alliance	291
Ceanothus cuneatus – <i>Adenostoma fasciculatum</i> Association.....	295
Ceanothus thyrsiflorus Shrubland Alliance	297
Ceanothus thyrsiflorus – (<i>Rubus ursinus</i>) Association	300
Ceanothus thyrsiflorus – Baccharis pilularis – <i>Toxicodendron diversilobum</i> Association	302
Cercocarpus montanus Shrubland Alliance	304
Cercocarpus montanus – <i>Prunus ilicifolia</i> Association	307
Cornus sericea Shrubland Alliance	308
Cornus sericea – <i>Salix (lasiolepis, exigua)</i> Association.....	310
Corylus cornuta var. californica Shrubland Alliance	311
Corylus cornuta / <i>Polystichum munitum</i> Association	313
Cytisus scoparius – Genista monspessulana – Cotoneaster spp. Shrubland Semi-Natural Alliance	314
Genista monspessulana Semi-natural Association	318
<i>Hypericum canariense</i> Provisional Semi-natural Association	320
Ulex europaeus Provisional Semi-natural Association	322
Diplacus aurantiacus Shrubland Alliance	324
Diplacus (aurantiacus, puniceus) Association.....	327
Frangula californica – Rhododendron occidentale – Salix breweri Shrubland Alliance	328
Gaultheria shallon – Rubus (ursinus) Shrubland Alliance	331
Holodiscus discolor – Baccharis pilularis – <i>Rubus ursinus</i> Association	334
Rubus parviflorus Association	336
<i>Rubus ursinus</i> Association	338
Lotus scoparius – Lupinus albifrons – Eriodictyon spp. Shrubland Alliance ...	340
Eriodictyon californicum / Herbaceous Association	343
<i>Lotus scoparius</i> Association	346
Lupinus arboreus Shrubland Alliance	348
Baccharis pilularis – <i>Lupinus arboreus</i> Association	352
<i>Lupinus arboreus</i> Association	354

Lupinus chamissonis – Ericameria ericoides Shrubland Alliance	357
Lupinus chamissonis Association	360
Lupinus chamissonis – Ericameria ericoides Association.....	362
Prunus ilicifolia – Heteromeles arbutifolia – Ceanothus spinosus Shrubland Alliance.....	364
Prunus ilicifolia ssp. Illicifolia – Heteromeles arbutifolia Association.....	367
Prunus ilicifolia ssp. Illicifolia / Sanicula crassicaulis Association	369
Quercus durata Shrubland Alliance.....	371
Quercus durata Association	374
Quercus durata – Adenostoma fasciculatum Provisional Association.....	376
Rubus spectabilis – Morella californica Shrubland Alliance.....	378
Morella californica – Rubus spp. Provisional Association	381
Sambucus racemosa – (Rubus ursinus) Provisional Association	383
Salix exigua Shrubland Alliance.....	385
Salix exigua Association.....	387
Salix hookeriana – Salix sitchensis – Spiraea douglasii Shrubland Alliance ...	388
Salix sitchensis Provisional Association.....	390
Salix lasiolepis Shrubland Alliance.....	391
Salix lasiolepis Association.....	394
Salix lasiolepis – Rubus spp. Association	396
Salix lasiolepis – Salix lucida Association	398
Toxicodendron diversilobum Shrubland Alliance	400
Toxicodendron diversilobum – (Baccharis pilularis) Association	402
HERBACEOUS VEGETATION	403
Abronia latifolia – Ambrosia chamissonis Herbaceous Alliance.....	403
Abronia latifolia – Calystegia soldanella – Lathyrus littoralis Association.....	406
Ambrosia chamissonis Association.....	408
Ammophila arenaria Herbaceous Semi-Natural Alliance	410
Ammophila arenaria Semi-natural Association	413
Atriplex prostrata – Cotula coronopifolia Herbaceous Semi-Natural Alliance .	415
Atriplex prostrata Semi-natural Association	417
Avena spp. – Bromus spp. Herbaceous Semi-Natural Alliance.....	418
Avena barbata – Avena fatua Semi-natural Association	422
Brachypodium distachyon Semi-natural Association.....	424
Bromus hordeaceus – Erodium botrys Semi-natural Association	426
Bidens cernua – Euthamia occidentalis – Ludwigia palustris Herbaceous Provisional Alliance	428
Euthamia occidentalis Provisional Association	431
Bolboschoenus maritimus Herbaceous Alliance.....	433
Bolboschoenus maritimus Association	436
Bolboschoenus maritimus – Sarcocornia pacifica Association	437
Brassica nigra – Centaurea (solstitialis, melitensis) Herbaceous Semi-Natural	

Alliance.....	439
<i>Carduus pycnocephalus</i> – <i>Silybum marianum</i> Provisional Semi-natural Association	443
<i>Centaurea solstitialis</i> Semi-natural Association.....	445
<i>Raphanus sativus</i> Semi-natural Association	447
Bromus carinatus – Elymus glaucus Herbaceous Alliance	449
Bromus carinatus Association	453
Elymus glaucus Association	456
<i>Pteridium aquilinum</i> – Grass Association.....	459
Cakile (edentula, maritima) Herbaceous Provisional Semi-Natural Alliance	461
Cakile (edentula, maritima) Provisional Semi-natural Association.....	463
Calamagrostis nutkaensis Herbaceous Alliance	464
Calamagrostis nutkaensis Association	468
Calamagrostis nutkaensis / <i>Baccharis pilularis</i> Association.....	471
Carex nudata Herbaceous Alliance.....	474
Carex nudata Association	476
Carex obnupta – Oenanthe sarmentosa – Scirpus microcarpus Herbaceous Alliance.....	477
<i>Argentina egedi</i> – (<i>Juncus lescurii</i>) Association	481
<i>Carex obnupta</i> Association.....	483
<i>Juncus lescurii</i> Association.....	485
<i>Scirpus microcarpus</i> Pacific Coast Association.....	488
Cortaderia (jubata, selliana) Herbaceous Semi-Natural Alliance.....	491
Cortaderia (jubata, selliana) Provisional Association	493
Deschampsia cespitosa – Hordeum brachyantherum – <i>Danthonia californica</i> Herbaceous Alliance	494
<i>Deschampsia</i> (cespitosa, holciformis) Association.....	498
<i>Deschampsia cespitosa</i> – <i>Danthonia californica</i> Association	501
<i>Deschampsia cespitosa</i> – <i>Eryngium armatum</i> Association	503
<i>Hordeum brachyantherum</i> Lowland Association	506
Distichlis spicata Herbaceous Alliance	508
<i>Distichlis spicata</i> – (<i>Sarcocornia pacifica</i>) Association	511
<i>Distichlis spicata</i> – <i>Frankenia salina</i> – <i>Jaumea carnosa</i> Association	513
Eichhornia crassipes – Ludwigia (hexapetala, peploides) Herbaceous Provisional Semi-Natural Alliance.....	515
<i>Ludwigia (hexapetala, peploides)</i> Provisional Semi-natural Association.....	517
Eleocharis (acicularis, macrostachya) Herbaceous Alliance.....	518
<i>Eleocharis macrostachya</i> Association	521
Eriophyllum staechadifolium – Erigeron glaucus – <i>Eriogonum latifolium</i> Herbaceous Alliance	523
<i>Artemisia pycnocephala</i> Association	527
<i>Erigeron glaucus</i> – <i>Fragaria chiloensis</i> Association	529
<i>Eriogonum parvifolium</i> Provisional Association	531
<i>Eriophyllum staechadifolium</i> – <i>Eriogonum latifolium</i> Association.....	533

Festuca idahoensis – Danthonia californica Herbaceous Alliance	535
Danthonia californica – Nassella pulchra Association	539
Danthonia californica Coastal Association	542
Festuca californica Association	545
Festuca idahoensis – (Danthonia californica – Koeleria macrantha) Association	547
Festuca idahoensis – Nassella pulchra Provisional Association.....	550
Perideridia kelloggii – Danthonia californica Provisional Association.....	553
Grindelia (stricta) Herbaceous Provisional Alliance.....	555
Grindelia stricta Provisional Association	557
Holcus lanatus – Anthoxanthum odoratum Herbaceous Semi-Natural Alliance	558
Holcus lanatus Semi-natural Association.....	561
Juncus (effusus, patens) – Carex (pansa, praegracilis) Herbaceous Alliance .	563
Carex serratodens Provisional Association.....	567
Juncus effusus Association	569
Juncus phaeocephalus Association.....	571
Lasthenia californica – Plantago erecta – Vulpia microstachys Herbaceous Alliance.....	574
Erigeron glaucus – Lasthenia californica Association.....	578
Hemizonia congesta – Lolium perenne Association.....	580
Lasthenia (californica, gracilis) Association	582
Lasthenia californica – Plantago erecta – Hesperevax sparsiflora Association.....	585
Vulpia microstachys – Plantago erecta – Calycadenia (truncata, multiglandulosa) Association	587
Lasthenia glaberrima Herbaceous Alliance.....	589
Lasthenia glaberrima – Pleuropogon californicus Association.....	591
Leymus cinereus – Leymus triticoides Herbaceous Alliance	592
Leymus triticoides Association	595
Leymus mollis Herbaceous Alliance.....	597
Leymus mollis – Abronia latifolia – (Cakile sp.) Association	599
Lolium perenne Herbaceous Semi-Natural Alliance	600
Lolium perenne Semi-natural Association.....	604
Lolium perenne – Lotus corniculatus Semi-natural Association.....	606
Mesembryanthemum spp. – Carpobrotus spp. Herbaceous Semi-Natural Alliance.....	609
Carpobrotus (edulis) Semi-natural Association	612
Mimulus (guttatus) Herbaceous Alliance	613
Cirsium fontinale Provisional Association	616
Mimulus guttatus Association	618
Nassella spp. – Melica spp. Herbaceous Alliance.....	620
Elymus multisets – (Eschscholzia californica – Plantago erecta) Association.....	624
Melica californica Association.....	627
Nassella lepida Provisional Association.....	630

Nassella pulchra – Avena spp. – Bromus spp. Association	632
Nassella pulchra – Hemizonia congesta Association	635
Nassella pulchra – Lolium perenne – (Trifolium spp.) Association	637
Nassella pulchra – Lolium perenne – Plantago erecta Serpentine Association.....	640
Phalaris aquatica – Phalaris arundinacea Herbaceous Semi-Natural Alliance. 642	
Phalaris aquatica Provisional Semi-natural Association	645
Polygonum lapathifolium – Xanthium strumarium Herbaceous Alliance	647
Polygonum (amphibium, lapathifolium) Association	649
Sarcocornia pacifica (Salicornia depressa) Herbaceous Alliance.....	650
Frankenia salina – Limonium californicum – Monanthochloe littoralis – Sarcocornia pacifica Association	653
Sarcocornia pacifica – Jaumea carnosa – Distichlis spicata Association.....	655
Sarcocornia pacifica Tidal Association	657
Schoenoplectus (acutus, californicus) Herbaceous Alliance	659
Schoenoplectus acutus Association	662
Schoenoplectus californicus Association	664
Sedum spathulifolium Herbaceous Provisional Alliance	666
Sedum spathulifolium – Polypodium californicum / Lichen – Moss Provisional Association	668
Sparganium (angustifolium) Herbaceous Alliance	669
Sparganium eurycarpum Provisional Association	671
Typha (angustifolia, domingensis, latifolia) Herbaceous Alliance	672
Typha (latifolia, angustifolia) Association	674

TREE OVERSTORY VEGETATION

Acer macrophyllum – Alnus rubra Forest & Woodland Alliance

Common Name: Bigleaf maple – red alder forest and woodland

NVC Alliance Code: A3745. *Acer macrophyllum - Alnus rubra* Riparian Forest Alliance

Statewide Description

Acer macrophyllum and/or *Alnus rubra* is dominant or co-dominant in the tree canopy with *Abies concolor*, *Abies grandis*, *Alnus rhombifolia*, *Calocedrus decurrens*, *Cornus nuttallii*, *Picea sitchensis*, *Populus trichocarpa*, *Pseudotsuga menziesii*, *Quercus* spp., *Salix* spp., *Sequoia sempervirens*, *Taxus brevifolia*, *Tsuga heterophylla*, and *Umbellularia californica*.

This alliance occurs in habitats with different moisture regimes from moist stream terraces to dry talus, but it attains its best development on deep alluvial soils. Stands typically include a well-developed shrub understory of species such as *Rubus spectabilis*, *R. ursinus*, and *Sambucus racemosa* (Cheng 2004, Keeler-Wolf et al. 2003a, Evens and Kentner 2006). Stands of *Alnus rubra* were much more restricted in the past, occurring chiefly along streams or natural landslides; today seedlings and stands easily establish in upland areas that have been recently logged (Sawyer 2006). The best developed stands are scattered along alluvial river terraces, in adjacent side drainages, and at springs along slopes. *Acer macrophyllum* is extremely flood tolerant; it

is the only hardwood encountered commonly in low elevation in Pacific Northwest coniferous forests in both steep upland slopes and riparian habitats. At the southern portion of its range, in southern and central California, it is usually riparian (Minore and Zasada 1990, Uchytil 1989a).

We are including three different environmental settings in this alliance at this time. Stands surrounded by coastal forests in northwestern or central California contain a scattering of tall conifers, such as *Picea sitchensis*, *Pseudotsuga menziesii*, or *Sequoia sempervirens* (Sawyer 2006). Stands in the mountains, which are scattered, typically contain *Pseudotsuga menziesii* as a co-dominant. Other California authors (Chambers 2003, Fites 1993, Jimerson et al. 1996) have placed their mixed associations in the *Pseudotsuga menziesii* or other conifer alliances; however, we place them in the *Acer macrophyllum* – *Alnus rubra* alliance, because this riparian species is a primary indicator and co-dominant in these associations. Stands on talus and other upland settings are the third environmental setting. We have combined two previously separate alliances, the *Acer macrophyllum* and *Alnus rubra* alliances as recognized in the 2009 book, *A Manual of California Vegetation, second edition*.

Local Vegetation Description

The Bigleaf maple – red alder forest and woodland Alliance forms an open to continuous tree canopy with an open to intermittent shrub understory. The dominant tree is *Alnus rubra*, and *Acer macrophyllum* are characteristic or often present. Commonly associated shrubs include *Rubus ursinus*, *Toxicodendron diversilobum*, and *Sambucus racemosa*, and commonly associated herbs include *Polystichum munitum*, *Athyrium filix-femina*, *Stachys bullata*, and *Urtica dioica*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	1.3	0 – 8	30.0	15 – 50
Hardwood	58.6	27 – 75	16.9	10 – 35
Regenerating or Shubby Tree	2.3	0 – 13.6	8.8	0.5 – 20
Shrub	20.0	3.0 – 65.0	2.4	0 – 5
Herb	25.2	0.2 – 87.5	1.0	0 – 5

Local Membership Rule

Acer macrophyllum dominates or co-dominates with *Umbellularia californica* in riparian stands, OR *Umbellularia californica* is dominant in riparian stands with *Acer macrophyllum* or *Pseudotsuga menziesii* characteristically present. An understory of riparian shrubs such as *Rhododendron occidentale* are sometimes present.

Alnus rubra dominates in the tree canopy in riparian settings, typically within a few miles of the coast. The understory is often comprised of one to many species of *Rubus*, *Salix lasiolepis*, and *Sambucus racemosa*, which sometimes exceed *Alnus* in cover. If *Salix lucida* is co-dominant, key to that *Salix* alliance. *Alnus rubra* stands were encountered in riparian or swampy bottomlands but can also occur along rocky streambeds in similar settings to *A. rhombifolia* stands. Careful identification of the *Alnus* species is important closer to the coast.

Local Environmental Description

Elevation: Mean 138 m, Range 15 – 564 m

Aspect: Variable (3), Flat (2), NW (1), SW (1), NE (1)

Slope: Mean 20 degrees, Range 0 – 60 degrees

Macro Topography: Bottom to Lower 1/3 of slope (3), Bottom (2), Lower 1/3 of slope (1), Lower to Middle 1/3 of slope (1), Not recorded (1)

Large Rock: Mean 0.4%, Range 0.0 – 1.2%

Small Rock: Mean 2.0%, Range 0.0 – 4.0%

Fines Cover: Mean 18.2%, Range 0.0 – 51.6%

Litter Cover: Mean 69.2%, Range 40.0 – 95%

Soil Texture (field assessed): Coarse, loamy sand (2), Medium to very fine, sandy loam (2), Not recorded (1), Unknown (1), Moderately coarse, sandy loam (1), Medium loam (1)

Geology (field or map data): Sandstone, shale, and conglomerate (3), Mixed metamorphic (2), Sandstone (2), Sandy alluvium (most alluvial fans and washes) (1), Sandstone and other sedimentary (1), Mixed sedimentary (1), Alluvium (1), Shale and other sedimentary (1)

San Mateo County Watersheds: Ano Nuevo (4), Half Moon Bay (3), Tunitas Creek (2), Palo Alto (1), Pescadero Creek (1), San Mateo Bayside (1)

Site Impacts

This alliance has low non-native plant cover (average 5.5%) relative to native cover. Non-native species that occur with highest frequency and abundance include *Conium maculatum* and *Myosotis latifolia*.

Associations in San Mateo County

- *Acer macrophyllum* / (*Rubus ursinus*)
- *Acer macrophyllum* – *Pseudotsuga menziesii* / *Polystichum munitum* *Alnus rubra* / *Rubus spectabilis* – *Sambucus racemosa*
- *Alnus rubra* / *Salix lasiolepis* – *Rubus* spp.
- *Umbellularia californica* – *Acer macrophyllum*

Classification Comments

This alliance has been redefined from previously separate *Acer macrophyllum* and *Alnus rubra* Alliances. The USNVC is also evaluating a broader merging of alliances including this alliance along with lower elevation stands of other riparian trees such as *Fraxinus latifolia*. Further updates to alliance concepts will be found online at the USNVC (2020).

Acer macrophyllum / (Rubus ursinus) Association

Common Name: Bigleaf Maple / (California blackberry) Woodland

Alliance: *Acer macrophyllum – Alnus rubra* Forest & Woodland Alliance

Local Vegetation Description

The Bigleaf Maple / (California blackberry) Association forms an open to continuous tree canopy with an open shrub understory. The dominant tree is *Acer macrophyllum*, and *Umbellularia californica* and *Pseudotsuga menziesii* are characteristic or often present. Commonly associated shrubs include *Toxicodendron diversilobum*, *Rubus ursinus*, and *Symporicarpos mollis*, and commonly associated herbs include *Iris douglasiana*, *Osmorhiza berteroii*, *Polystichum munitum*, *Sanicula crassicaulis*, and *Stachys ajugoides*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	2.2	0 – 7	22.5	5 – 50
Hardwood	54.3	30 – 65	15.8	5 – 35
Regenerating or Shrubby Tree	0.7	0 – 2.4	3.5	2 – 5
Shrub	6.7	1.0 – 20.0	1.6	0.5 – 5
Herb	15.8	2 – 40	0.3	0 – 1

Local Environmental Description

Elevation: Mean 217 m, Range 60 – 629 m

Aspect: NE (2), NW (2), SW (1), Variable (1)

Slope: Mean 30 degrees, Range 4 – 65 degrees

Macro Topography: Lower 1/3 of slope (2), Bottom (1), Bottom to Lower 1/3 of slope (1), Middle 1/3 of slope (1), Upper 1/3 of slope (1)

Large Rock: Mean 4.6%, Range 0.2 – 15.0%

Small Rock: Mean 6.1%, Range 0.4 – 20.0%

Fines Cover: Mean 6.2%, Range 1.0 – 20.0%

Litter Cover: Mean 68.2%, Range 4.0 – 95%

Soil Texture (field assessed): Coarse, loamy sand (2), Moderately coarse, sandy loam (2), Moderately fine clay loam (1), Moderately fine silty clay loam (1)

Geology (field or map data): Franciscan melange (3), Sandstone and other sedimentary (1), Sedimentary (type unknown) (1), Sandstone (1)

San Mateo County Watersheds: Ano Nuevo (1), Palo Alto (1)

Other Watersheds, Marin Co.: Lagunitas Creek (2), Novato (1), San Rafael (1);

Site Impacts

This association has low non-native plant cover (average 1.6%) relative to native

Acer macrophyllum / (Rubus ursinus) Association
Acer macrophyllum – Alnus rubra Woodland Alliance

cover. Non-native species that occur with highest frequency and abundance include *Briza maxima*, *Carduus pycnocephalus*, *Galium aparine*, and *Rubus armeniacus*.

Classification Comments

The name of this association was previously *Acer macrophyllum* Association, which has been updated to match the NVC. Since the number of surveys of this association in San Mateo County are low, data from nearby counties were included.

Acer macrophyllum – Pseudotsuga menziesii / Polystichum munitum Association

Common Name: Douglas-fir - Bigleaf Maple / Sword Fern Woodland

Alliance: *Acer macrophyllum – Alnus rubra* Forest & Woodland Alliance

Local Vegetation Description

The Douglas-fir - Bigleaf Maple / Sword Fern Association forms an open tree canopy with an intermittent shrub understory in the single sample available. The co-dominant trees are *Acer macrophyllum* and *Notholithocarpus densiflorus*, and *Pseudotsuga menziesii* is characteristic. Commonly associated shrubs include *Holodiscus discolor*, *Rubus ursinus*, *Lonicera hispidula*, and *Toxicodendron diversilobum* and commonly associated herbs include *Urtica dioica*, *Polystichum munitum*, and *Pteridium aquilinum*.

Local Environmental Description

Elevation: 564 m

Aspect: no data

Slope: no data

Macro Topography: no data

Large Rock: no data

Small Rock: no data

Fines Cover: no data

Litter Cover: no data

Soil Texture (field assessed): no data

Geology (field or map data): Shale and other sedimentary (1)

San Mateo County Watersheds: San Mateo Bayside (1)

Site Impacts

This association has very low non-native plant cover (average 0.0%) relative to native cover. No non-natives were recorded by the surveyor.

Classification Comments

The NVC includes *Umbellularia californica* in their analogous association which is placed in the upland *Pseudotsuga menziesii* - *Notholithocarpus densiflorus* alliance, which we are not including in the study area.

Classification Comments

Alnus rubra / Salix lasiolepis – Rubus spp. Association
Acer macrophyllum – *Alnus rubra* Woodland Alliance

Previously there were 2 separate associations recognized, an *Alnus rubra / Salix lasiolepis* on Point Reyes (Keeler-Wolf et al. 2003a) and an *Alnus rubra / Rubus* spp. from Sonoma County (Klein et al. 2015). These have been lumped into a single association, due to overlapping species composition..

Alnus rubra / Salix lasiolepis – Rubus spp. Association
Acer macrophyllum – Alnus rubra Woodland Alliance

***Umbellularia californica – Acer macrophyllum* Association**

Common Name: California Bay – Bigleaf Maple Woodland

Alliance: *Acer macrophyllum* – *Alnus rubra* Forest & Woodland Alliance

Local Vegetation Description

The California Bay – Bigleaf Maple Association forms an intermittent to continuous tree canopy with an open shrub understory. The co-dominant trees are *Umbellularia californica* and *Acer macrophyllum*, and *Alnus rubra* and *Pseudotsuga menziesii* are often present. Commonly associated shrubs include *Toxicodendron diversilobum*, *Corylus cornuta*, and *Rubus ursinus*, and commonly associated herbs include *Polystichum munitum*, *Equisetum telmateia*, *Dryopteris arguta*, *Cardamine californica*, and *Stachys bullata*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	1.0	0 – 2	42.5	35 – 50
Hardwood	67.5	60 – 75	22.5	15 – 35
Regenerating or Shrubby Tree	6.8	0 – 13.6	15.0	10 – 20
Shrub	16.5	3.0 – 30.0	1.5	1 – 2
Herb	11.0	2 – 20	0.5	0 – 1

Local Environmental Description

Elevation: Mean 186 m, Range 169 – 203 m

Aspect: NW (1), Variable (1)

Slope: Mean 16 degrees, Range 11 – 20 degrees

Macro Topography: Bottom (1), Lower 1/3 of slope (1)

Large Rock: Mean 0.1%, Range 0.0 – 0.2%

Small Rock: Mean 1.2%, Range 0.4 – 2.0%

Fines Cover: Mean 2.5%, Range 0.0 – 5.0%

Litter Cover: Mean 90.0%, Range 85.0 – 95%

Soil Texture (field assessed): Medium to very fine, sandy loam (2)

Geology (field or map data): Mixed metamorphic (2)

San Mateo County Watersheds: Half Moon Bay (1), Palo Alto (1)

Site Impacts

This association has very low non-native plant cover (average 0.1%) relative to native cover. Non-native species that occur with highest frequency and abundance include *Hedera helix* and *Myosotis latifolia*.

Classification Comments

This association was previously placed in the *Umbellularia californica* Alliance, but has

Umbellularia californica – Acer macrophyllum Association
Acer macrophyllum – Alnus rubra Woodland Alliance

been moved here with other riparian associations.

Acer negundo Forest & Woodland Alliance

Common Name: Box-elder forest and woodland

NVC Alliance Code: A3796. *Acer negundo* - *Fraxinus anomala* - *Celtis laevigata* var. *reticulata* Riparian Woodland Alliance

Statewide Description

Acer negundo is dominant or co-dominant in the tree canopy with *Alnus rhombifolia*, *Fraxinus latifolia*, *Juglans hindsii*, *Juglans hindsii* × *regia*, *Platanus racemosa*, *Populus fremontii*, *Populus trichocarpa*, *Quercus lobata*, *Salix gooddingii*, and *Salix* spp.

In California, this alliance is mainly limited to riparian zones of major streams and rivers that are regularly flooded. Individual trees often occur as an understory component in stands of *Populus fremontii*, *Quercus lobata*, and *Salix gooddingii* Alliances. *Acer negundo* stands may result from removal of the overstory trees in stands of those alliances. The *Acer negundo* Alliance is rare in the state, where small stands form and sometimes are monospecific.

Local Vegetation Description

The Box-elder forest and woodland Alliance forms an intermittent to continuous tree canopy with an open to intermittent shrub understory. The dominant tree is *Acer negundo*, and *Alnus rubra* and *Umbellularia californica* are characteristic or often present. Regenerating or shrubby trees that are often present include *Acer negundo* and *Alnus rubra*. Commonly associated shrubs include *Rubus ursinus*, *Sambucus* *Acer negundo* Woodland Alliance

racemosa, and *Salix lasiolepis*, and commonly associated herbs include *Dryopteris arguta*, *Marah fabaceus*, *Stachys bullata*, *Urtica dioica*, *Delairea odorata*, *Equisetum telmateia*, *Myosotis latifolia*, *Polystichum munitum*, *Scrophularia californica*, and *Vinca major*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	0.0	0 – 0	no data	no data
Hardwood	78.3	63 – 90	8.8	5 – 15
Regenerating or Shrubby Tree	4.1	0 – 13.4	3.5	2 – 5
Shrub	27.1	13.0 – 40.0	2.1	0.5 – 5
Herb	12.3	0.2 – 46	0.6	0 – 1

Local Membership Rule

Acer negundo dominates in the tree overstory, often along major streams and rivers, with other riparian plants such as *Fraxinus*, *Populus*, *Rubus*, and *Salix*. Stands are considered rare in the state and may be small and monospecific.

Local Environmental Description

Elevation: Mean 30 m, Range 14 – 52 m

Aspect: Variable (1), NE (1), NW (1), SW (1)

Slope: Mean 15 degrees, Range 5 – 28 degrees

Macro Topography: Lower to Middle 1/3 of slope (2), Bottom (1), Lower 1/3 of slope (1)

Large Rock: Mean 0.0%, Range 0.0 – 0.0%

Small Rock: Mean 0.0%, Range 0.0 – 0.0%

Fines Cover: Mean 11.3%, Range 0.0 – 38.0%

Litter Cover: Mean 86.3%, Range 60.0 – 97%

Soil Texture (field assessed): Not recorded (2), Moderately coarse, sandy loam (1), Fine silty clay (1)

Geology (field or map data): Mixed alluvium (2), Sandstone and other sedimentary (1), Sandy alluvium (most alluvial fans and washes) (1)

San Mateo County Watersheds: Pescadero Creek (3), Ano Nuevo (1)

Site Impacts

This alliance has low non-native plant cover (average 4.7%) relative to native cover. Non-native species that occur with highest frequency and abundance include *Conium maculatum*, *Delairea odorata*, *Ehrharta erecta*, *Myosotis latifolia*, and *Vinca major*.

***Aesculus californica* Forest & Woodland Alliance**

Common Name: California buckeye groves

NVC Alliance Code: A4125. *Aesculus californica* Woodland Alliance

Statewide Description

Aesculus californica is dominant or co-dominant in the tree canopy with *Fraxinus dipetala*, *Heteromeles arbutifolia*, *Pinus sabiniana*, *Prunus ilicifolia*, *Quercus wislizeni*, and *Umbellularia californica*.

Stands tend to be small and often occur in relatively mesic concavities inland or on steep lower to mid slopes in coastal areas. They intermix with stands of many chaparral and woodland alliances at low elevations.

Local Vegetation Description

The California buckeye groves Alliance forms an intermittent to continuous tree canopy with an open to intermittent shrub understory. The dominant tree is *Aesculus californica*, and *Quercus agrifolia* and *Umbellularia californica* are characteristic or often present. Commonly associated shrubs include *Toxicodendron diversilobum* and *Rubus ursinus*, and commonly associated herbs include *Claytonia perfoliata*, *Dryopteris arguta*, *Heracleum maximum*, and *Marah fabaceus*.

Lifeform	Cover (%)	Cover (%)	Height (m)	Height (m)
----------	-----------	-----------	------------	------------

	Mean	Range	Mean	Range
Conifer	0.7	0 – 5	27.5	20 – 35
Hardwood	59.4	35 – 90	10.5	5 – 15
Regenerating or Shrubby Tree	1.9	0 – 10	3.5	2 – 5
Shrub	25.7	3 – 60	2.6	1 – 5
Herb	29.3	2 – 90	0.5	0 – 2

Local Membership Rule

Aesculus californica dominates in open to moderately dense woodlands. If *Umbellularia californica* is present, it is sub-dominant. A variety of herbs may be found in the understory.

Local Environmental Description

Elevation: Mean 183 m, Range 23 – 508 m

Aspect: NW (2), SE (2), NE (1), Variable (1)

Slope: Mean 20 degrees, Range 4 – 35 degrees

Macro Topography: Lower 1/3 of slope (3), Wash (channel bed) (1), Middle to Upper 1/3 of slope (1), Upper 1/3 of slope (1)

Large Rock: Mean 0.0%, Range 0.0 – 0.2%

Small Rock: Mean 0.2%, Range 0.0 – 1.2%

Fines Cover: Mean 11.4%, Range 3.0 – 19.0%

Litter Cover: Mean 72.5%, Range 10.0 – 96%

Soil Texture (field assessed): Not recorded (1), Coarse, loamy sand (1), Medium to very fine, loamy sand (1), Medium to very fine, sandy loam (1), Moderately coarse, sandy loam (1), Moderately fine clay loam (1)

Geology (field or map data): Franciscan melange (4), Volcanic flow rocks (2), Greenstone (1), Sandy alluvium (most alluvial fans and washes) (1), Shale and other sedimentary (1)

San Mateo County Watersheds: San Mateo Bayside (5), Palo Alto (2), Ano Nuevo (1), San Gregorio Creek (1)

Site Impacts

This alliance has low non-native plant cover (average 3.8%) relative to native cover. Non-native species that occur with highest frequency and abundance include *Carduus pycnocephalus*, *Conium maculatum*, and *Myosotis latifolia*.

***Aesculus californica – Umbellularia californica* Association**

Common Name: California Buckeye – California Bay Woodland

Alliance: *Aesculus californica* Forest & Woodland Alliance

Local Vegetation Description

The California Buckeye – California Bay / Association forms an intermittent to continuous tree canopy with an open to intermittent shrub understory. The dominant tree is *Aesculus californica*, and *Quercus agrifolia* and *Umbellularia californica* are characteristically present. Commonly associated shrubs include *Toxicodendron diversilobum*, and commonly associated herbs include *Stachys ajugoides*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	0.0	0 – 0	no data	no data
Hardwood	55.0	35 – 90	no data	no data

Shrub	38.3	5 – 60	2.6	2 – 5
Herb	58.3	20 – 90	0.5	0 – 0.5

Local Environmental Description

Elevation: Mean 115 m, Range 93 – 158 m **Aspect:** no data

Slope: no data

Macro Topography: no data

Large Rock: No data

Small Rock: No data

Fines Cover: No data

Litter Cover: No data

Soil Texture (field assessed): no data

Geology (field or map data): Franciscan melange (3)

San Mateo County Watersheds: San Mateo Bayside (3)

Site Impacts

This association has very low non-native plant cover (average 0.6%) relative to native cover. Non-native species that occur with highest frequency and abundance include *Avena* spp., *Briza maxima*, and *Carduus pycnocephalus*.

Classification Comments

This association is a merge of two previously defined associations which share similar understories, *Aesculus californica – Umbellularia californica* / *Diplacus aurantiacus* and *Aesculus californica – Umbellularia californica* / *Holodiscus discolor*.

Alnus rhombifolia Forest & Woodland Alliance

Common Name: White alder groves

NVC Alliance Code: A3777. *Alnus rhombifolia* Riparian Forest Alliance

Statewide Description

Alnus rhombifolia is dominant or co-dominant in the tree canopy with *Acer macrophyllum*, *Chamaecyparis lawsoniana*, *Fraxinus latifolia*, *Notholithocarpus densiflorus*, *Platanus racemosa*, *Populus fremontii*, *Populus trichocarpa*, *Pseudotsuga menziesii*, *Quercus lobata*, *Salix spp.* and *Umbellularia californica*.

Alnus rhombifolia stands primarily occur in inland foothills and lower montane zones, usually as narrow strips along perennial stream courses throughout cismontane California. *Alnus rhombifolia* is well adapted to many flood regimes. Stands exist usually on seasonally flooded stream banks and channel bars just at or below the bank full level, but they occur sometimes in intermittently flooded floodplains and rarely in permanently saturated seeps. Flooding typically comes from winter floods and spring runoff.

Local Vegetation Description

The White alder groves Alliance forms an open to continuous tree canopy with an open to intermittent shrub understory. The dominant tree is *Alnus rhombifolia* and *Umbellularia californica*, and *Acer macrophyllum*, *Aesculus californica*, and *Quercus agrifolia* are characteristic or often present. Commonly associated shrubs include *Rubus*

Alnus rhombifolia Woodland Alliance

ursinus, *Toxicodendron diversilobum*, *Heteromeles arbutifolia*, and *Lonicera hispidula*, and commonly associated herbs include *Athyrium filix-femina*, *Equisetum telmateia*, *Pentagramma triangularis*, and *Polystichum munitum*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	2.6	0 – 6	27.5	10 – 35
Hardwood	31.8	20 – 50	10.5	5 – 20
Regenerating or Shrubby Tree	1.7	0 – 7.2	3.5	1 – 10
Shrub	20.3	4 – 40	2.5	1 – 2
Herb	15.2	5 – 32	0.6	0 – 0.5

Local Membership Rule

Alnus rhombifolia dominates or co-dominates with *Acer macrophyllum* or *Umbellularia californica* in the tree overstory. *Umbellularia californica* may be higher in cover, though stands for this type will often have other riparian trees along with *Alnus rhombifolia* to be classed here. If *Fraxinus latifolia* is co-dominant, key to the *Fraxinus latifolia* Alliance below. A variety of shrubs and herbs may be found in the understory, including *Rubus*, *Toxicodendron*, and numerous ferns. Careful identification of alder stands closer to the coast is necessary to differentiate from *A. rubra* stands.

Local Environmental Description

Elevation: Mean 162 m, Range 52 – 290 m

Aspect: Variable (2), Flat (2), SE (1)

Slope: Mean 34 degrees, Range 0 – 75 degrees

Macro Topography: Bottom (3), Middle 1/3 of slope (1), Bottom to Lower 1/3 of slope (1)

Large Rock: Mean 13.4%, Range 1.0 – 25.0%

Small Rock: Mean 11.0%, Range 1.2 – 25.0%

Fines Cover: Mean 22.3%, Range 1.0 – 65.0%

Litter Cover: Mean 28.8%, Range 2.0 – 70%

Soil Texture (field assessed): Medium to very fine, sandy loam (2), Medium silt (1),

Moderately coarse, sandy loam (1)

Geology (field or map data): Franciscan melange (2), Sandstone (1), Ultramafic

rocks, mostly serpentine (1), Volcanic and metavolcanic rocks (1), Mixed metamorphic (1)

San Mateo County Watersheds: Palo Alto (2), San Mateo Bayside (1)

Other Watersheds, Marin Co.: Lagunitas Creek (2), San Rafael (1)

Site Impacts

This alliance has low non-native plant cover (average 1.5%) relative to native cover. Non-native species that occur with highest frequency and abundance include *Genista monspessulana* and *Trifolium dubium*.

Associations in San Mateo County

Alnus rhombifolia Woodland Alliance

- *Alnus rhombifolia / Carex (nudata)*
- *Alnus rhombifolia – Umbellularia californica – (Quercus chrysolepis)*

Classification Comments

Since the number of surveys of this alliance in San Mateo County is low, data from nearby counties were included.

Site Impacts

This association has low non-native plant cover (average 3.6%) relative to native cover. Non-native species that occur with highest frequency and abundance include

Alnus rhombifolia / Carex (nudata) Association
Alnus rhombifolia Woodland Alliance

Genista monspessulana, *Melissa officinalis*, *Mentha spicata*, and *Vinca major*.

Classification Comments

The name of this association has been updated to include other species of *Carex*.

Alnus rhombifolia – Umbellularia californica – (Quercus chrysolepis) Association

Common Name: White Alder – California Laurel – (Canyon Live Oak) Woodland

Alliance: *Alnus rhombifolia* Forest & Woodland Alliance

Local Vegetation Description

The White Alder – California Laurel – (Canyon Live Oak) Association forms an intermittent to continuous tree canopy with an open to intermittent shrub understory. The co-dominant trees are *Alnus rhombifolia* and *Umbellularia californica*, and *Acer macrophyllum* and *Quercus agrifolia* are characteristic or often present. Commonly associated shrubs include *Lonicera hispidula*, *Rubus ursinus*, *Toxicodendron diversilobum*, and *Heteromeles arbutifolia*, and commonly associated herbs include *Pentagramma triangularis*, *Athyrium filix-femina*, and *Polystichum munitum*.

Geology (field or map data): Franciscan melange (2), Mixed metamorphic (1), Ultramafic rocks, mostly serpentine (1), Volcanic and metavolcanic rocks (1)

San Mateo County Watersheds: Palo Alto (1), San Mateo Bayside (1)

Other Watersheds, Marin Co.: Lagunitas Creek (2), San Rafael (1)

Site Impacts

This association has low non-native plant cover (average 1.1%) relative to native cover.

Non-native species that occur with highest frequency and abundance include *Avena* spp., *Carduus pycnocephalus*, *Conium maculatum*, *Geranium dissectum*, *Myosotis latifolia*, and *Trifolium dubium*.

Classification Comments

This association has been renamed from the *Umbellularia californica* – *Alnus rhombifolia* Association to better fit the species composition in the southern Sierra Nevada Foothills. It was originally placed in the *Umbellularia californica* Alliance. Since the number of surveys of this association in San Mateo County are low, data from nearby counties were included.

***Arbutus menziesii* Forest Alliance**

Common Name: Madrone forest

NVC Alliance Code: A3357. *Notholithocarpus densiflorus - Arbutus menziesii* Forest Alliance

Statewide Description

Arbutus menziesii is dominant or co-dominant in the tree canopy with *Acer macrophyllum*, *Notholithocarpus densiflorus*, *Pseudotsuga menziesii*, *Quercus agrifolia*, *Quercus chrysolepis*, *Quercus kelloggii*, *Quercus wislizeni*, and *Umbellularia californica*.

Arbutus menziesii groves have traditionally been considered part of the “mixed evergreen forest” and not treated as a separate type (Sawyer 2007). Although *A. menziesii* is common as a secondary species in many forest types, it does form distinctive stands of high cover worthy of recognition in parts of the state that have relatively snow-free winters but upwards of 100 cm of annual precipitation. Stands in northern parts of the state mix with those of the *Pseudotsuga menziesii* – *Notholithocarpus densiflorus* Alliance.

Local Vegetation Description

The Madrone forest Alliance forms an open to continuous tree canopy with an open to intermittent shrub understory. The dominant tree is *Arbutus menziesii*, and *Pseudotsuga menziesii*, *Quercus agrifolia*, and *Umbellularia californica* are characteristic or often present. Commonly associated shrubs include *Toxicodendron diversilobum*, *Lonicera*

Arbutus menziesii Woodland Alliance

hispidula, *Rubus ursinus*, *Frangula californica*, and *Heteromeles arbutifolia*, and commonly associated herbs include *Clinopodium douglasii* and *Sanicula crassicaulis*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	2.4	0 – 10	17.5	15 – 20
Hardwood	56.8	30 – 80	12.5	10 – 15
Regenerating or Shrubby Tree	7.1	0 – 37.4	3.5	2 – 5
Shrub	18.4	2 – 50	0.5	0 – 1
Herb	18.6	3 – 40	0.3	0 – 0.5

Local Membership Rule

Arbutus menziesii is either dominant with sub-dominant *Quercus agrifolia* or is dominant to co-dominant with *Quercus kelloggii* and/or *Umbellularia californica*. *Pseudotsuga menziesii*, *Heteromeles arbutifolia*, and *Toxicodendron diversilobum* are often present. If *Arbutus* is sub- to co-dominant with *Quercus agrifolia*, *Q. chrysolepis*, or *Notholithocarpus densiflorus*, key to the one of these alliances instead of *A. menziesii*.

Local Environmental Description

Elevation: Mean 283 m, Range 114 – 493 m

Aspect: Flat (1), NE (1)

Slope: Mean 8 degrees, Range 0 – 15 degrees

Macro Topography: Middle 1/3 of slope (1), Upper 1/3 of slope to Ridgetop (1)

Large Rock: Mean 3.0%, Range 0.0 – 12.0%

Small Rock: Mean 0.5%, Range 0.0 – 2.0%

Fines Cover: Mean 3.7%, Range 1.0 – 8.0%

Litter Cover: Mean 89.8%, Range 80.0 – 100%

Soil Texture (field assessed): Coarse, loamy sand (1), Moderately fine clay loam (1)

Geology (field or map data): Shale and other sedimentary (6), Sandstone (1)

San Mateo County Watersheds: San Mateo Bayside (4), Palo Alto (3)

Site Impacts

This alliance has low non-native plant cover (average 2.6%) relative to native cover. Non-native species that occur with highest frequency and abundance include *Cotoneaster pannosus*, *Epipactis helleborine*, and *Torilis arvensis*.

***Eucalyptus spp. – Ailanthus altissima – Robinia pseudoacacia* Woodland Semi- Natural Alliance**

Common Name: Eucalyptus – tree of heaven – black locust groves

NVC Alliance Code: A0084. *Eucalyptus* spp. Ruderal Forest Alliance

Statewide Description

Ailanthus altissima, *Acacia melanoxylon*, one or more species of *Eucalyptus*, and/or *Robinia pseudoacacia* is dominant in the tree canopy.

Understories in groves of the fast-growing, long-lived *Eucalyptus* trees are usually depauperate. A buildup of allelopathic chemicals in the soil and high volumes of debris inhibit the establishment of other plants, though sometimes other non-natives, such as *Hedera helix*, clamber extensively in stands. Seeds

of *Eucalyptus* germinate when tree crowns and built-up debris are removed by fire or in other ways. Tree stumps sprout readily from the lignotuber when trees are felled (Boyd 2000, Bean and Russo 2005, Esser 1993b, Skolmen and Ledig 1990).

In stands dominated by *Ailanthus altissima*, the understory may be dominated by non-native annual grasses. *Acacia melanoxylon* or *Robinia pseudoacacia* dominated stands have an open to intermittent shrub layer and an herbaceous layer may be open or dominated by non-native grasses.

Local Vegetation Description

Eucalyptus spp. – *Ailanthus altissima* – *Robinia pseudoacacia* Woodland Semi-Natural Alliance

The Eucalyptus – tree of heaven – black locust groves Alliance forms an open to continuous tree canopy with an open to continuous shrub understory. *Eucalyptus globulus* and/or *Acacia melanoxylon* are characteristic or often present. Commonly associated shrubs include *Rubus ursinus*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	3.3	0 – 15	18.8	10 – 35
Hardwood	55.8	20 – 80	20.0	10 – 35
Regenerating or Shrubby Tree	3.0	0 – 15.8	8.5	2 – 15
Shrub	22.8	2 – 85	1.5	0 – 5
Herb	12.0	0.2 – 80	0.3	0 – 1

Local Membership Rule

A tree species of *Eucalyptus*, *Acacia melanoxylon*, or *Ailanthus altissima* dominates in planted or naturalized stands. Often found in groves, windbreaks, uplands, and along stream courses. Stands were observed but rarely sampled in San Mateo County. For shrubby species of *Acacia*, see the Naturalized Non-Native Mediterranean Scrub Group.

Local Environmental Description

Elevation: Mean 112 m, Range 11 – 331 m

Aspect: SW (2), Variable (1), NW (1), Flat (1), SE (1)

Slope: Mean 15 degrees, Range 0 – 30 degrees

Macro Topography: Lower to Middle 1/3 of slope (2), Middle 1/3 of slope (2), Lower 1/3 of slope (1), Bottom to Lower 1/3 of slope (1)

Large Rock Mean 0.0%, Range 0.0 – 0.0%

Small Rock: Mean 0.0%, Range 0.0 – 0.0%

Fines Cover: Mean 6.5%, Range 0.0 – 20.0%

Litter Cover: Mean 89.5%, Range 75.0 – 96%

Soil Texture (field assessed): Fine silty clay (2), Moderately fine sandy clay loam (2), Medium to very fine, loamy sand (1), Fine clay (1)

Geology (field or map data): Sandstone and other sedimentary (2), Volcanic and metavolcanic rocks (2), Franciscan melange (2), Alluvium (2), Granitic (1), Shale and other sedimentary (1)

San Mateo County Watersheds: Tunitas Creek (4), San Francisco Coastal (2), San Mateo Bayside (2), Pacifica (1), Pescadero Creek (1)

Site Impacts

This alliance has greater cover of exotics than natives, non-native plant cover averages 64.4% relative to native cover. Non-native species that occur with highest frequency and abundance include *Acacia melanoxylon*, *Cortaderia jubata*, *Eucalyptus globulus*, *Geranium dissectum*, *Oxalis pes-caprae*, and *Sonchus asper*.

***Acacia melanoxylon* Provisional Semi-natural Association**

Common Name: Blackwood Acacia Woodland

Alliance: *Eucalyptus* spp. – *Ailanthus altissima* – *Robinia pseudoacacia* Woodland
Semi-Natural Alliance

Local Vegetation Description

The Blackwood Acacia Association forms an intermittent to continuous tree canopy with an open to intermittent shrub understory. The dominant tree is *Acacia melanoxylon*. Regenerating or shrubby trees that are dominant and characteristic include *Acacia melanoxylon*. Commonly associated shrubs include *Rubus ursinus* and *Sambucus racemosa*, and commonly associated herbs include *Sanicula crassicaulis*, *Galium aparine*, *Oxalis pes-caprae*, and *Polystichum munitum*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range

Hesperocyparis (pigmaea, abramsiana, macrocarpa, goveniana) Woodland Alliance

Common Name: California coastal cypress woodland

NVC Alliance Code: A3352. *Hesperocyparis goveniana - Hesperocyparis macrocarpa*
Woodland Alliance

Statewide Description

Hesperocyparis abramsiana, *H. goveniana*, *H. macrocarpa*, or *H. pigmaea* dominates or co-dominates in the tree canopy with *Pinus muricata*, *Pinus radiata*, or *Sequoia sempervirens*. Shrubs may include *Arctostaphylos spp.*, *Rhododendron macrophyllum*, and *Vaccinium ovatum*.

The four rare species *Hesperocyparis* included in this alliance are restricted to coastal habitats. Due to their similarity of habitat and associates, they are combined here in a single alliance. Because of the rarity of the trees, stands of three of the species were treated as Special Stands rather than Alliances in the 2009 publication of A Manual of California Vegetation, second edition. Only stands of *Hesperocyparis pigmaea* were described at the alliance level.

Hesperocyparis abramsiana grows mostly on well-drained ridgelines above the *Sequoia sempervirens* forests on the slopes, canyons, and basins below. Individual trees and groves, both pure and with mixed composition, form a fine vegetation mosaic with other forest and chaparral types, variously described as coastal closed-pine forest, maritime Coast Range ponderosa pine forest, maritime chaparral, mixed chaparral, and mixed evergreen forest.

Local Vegetation Description

The California coastal cypress woodland Alliance forms an open tree canopy with an open to continuous shrub understory. The dominant tree is *Hesperocyparis abramsiana*, and *Quercus wislizeni*, *Arbutus menziesii*, *Pinus attenuata*, and *Pseudotsuga menziesii* are characteristic or often present. Commonly associated shrubs include *Adenostoma fasciculatum*, *Arctostaphylos crustacea*, *Arctostaphylos andersonii*, *Arctostaphylos sensitiva*, *Arctostaphylos silvicola*, *Ceanothus cuneatus*, *Diplacus aurantiacus*, *Heteromeles arbutifolia*, *Lepechinia calycina*, *Lotus scoparius*, and *Symphoricarpos mollis*, and commonly associated herbs include *Aira caryophyllea*, *Calamagrostis rubescens*, *Castilleja foliolosa*, *Galium californicum*, *Gastridium phleoides*, *Lomatium dasycarpum*, *Nassella lepida*, *Polygala californica*, *Pseudognaphalium canescens* ssp. *beneolens*, *Zigadenus fremontii*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	23.5	23 – 24	7.5	5 – 10
Hardwood	1.6	0.2 – 3	3.5	2 – 5

Site Impacts

Hesperocyparis (pigmaea, abramsiana, macrocarpa, goveniana) Woodland Alliance

This alliance has low non-native plant cover (average 1.9%) relative to native cover. Non-native species that occur with highest frequency and abundance include *Aira caryophyllea* and *Gastridium phleoides*.

Associations in San Mateo County

- *Hesperocyparis abramsiana* / *Arctostaphylos* (crustacea, silvicola)

Classification Comments

Since the number of surveys of this alliance in San Mateo County is low, data from nearby counties were included.

***Hesperocyparis macrocarpa* – *Pinus radiata* Woodland Semi-Natural Alliance**

Common Name: Monterey cypress – Monterey pine stands

NVC Alliance Code: N/A.

Statewide Description

Hesperocyparis macrocarpa and/or *Pinus radiata* are dominant or co-dominant in the tree canopy. While native groves of these conifers are rare, they both are invasive along the California coast. They have been planted along roads, as hedgerows, and as ornamentals throughout the region, where they continue to spread through natural regeneration.

Local Vegetation Description

The Monterey cypress – Monterey pine stands Alliance forms an open to continuous tree canopy with an open to continuous shrub understory. The dominant tree is *Hesperocyparis macrocarpa*, and *Pinus radiata* are characteristic or often present. Commonly associated shrubs include *Rubus ursinus*, *Toxicodendron diversilobum*, *Baccharis pilularis*, and *Heteromeles arbutifolia*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
----------	-------------------	--------------------	--------------------	---------------------

Conifer	49.8	15 – 85	20.0	5 – 35
Hardwood	1.6	0 – 8	12.5	10 – 15
Regenerating or Shrubby Tree	1.0	0 – 3	3.8	0.5 – 10
Shrub	24.9	2 – 90	1.9	0 – 5
Herb	16.6	2 – 55	0.7	0 – 5

Local Membership Rule

Stands dominated or co-dominated by planted or naturalized conifer species including *Hesperocyparis macrocarpa* and/or *Pinus radiata*.

Local Environmental Description

Elevation: Mean 103 m, Range 37 – 306 m

Aspect: SE (3), NW (2), NE (1), SW (1)

Slope: Mean 13 degrees, Range 3 – 25 degrees

Macro Topography: Middle 1/3 of slope (5), Lower 1/3 of slope (1), Lower to Middle 1/3 of slope (1)

Large Rock: Mean 0.1%, Range 0.0 – 1.0%

Small Rock: Mean 0.6%, Range 0.0 – 2.0%

Fines Cover: Mean 17.7%, Range 0.2 – 40.0%

Litter Cover: Mean 71.3%, Range 25.0 – 97%

Soil Texture (field assessed): Medium to very fine, sandy loam (2), Not recorded (2), Loam, (class unknown) (1), Moderately coarse, sandy loam (1), Moderately fine sandy clay loam (1)

Geology (field or map data): Sandstone and other sedimentary (2), Franciscan melange (2), Granitic (1), Granitic (generic) (1), Metamorphic (type unknown) (1), Mixed metamorphic (1)

San Mateo County Watersheds: Pacifica (3), San Mateo Bayside (3), Ano Nuevo (1), San Francisco Coastal (1)

Site Impacts

This alliance has greater cover of exotics than natives, non-native plant cover averages 57.0% relative to native cover. Non-native species that occur with highest frequency and abundance include *Briza maxima*, *Cortaderia jubata*, *Eucalyptus globulus*, *Genista monspessulana*, *Hedera helix*, *Hypochaeris radicata*, *Oxalis pes-caprae*, and *Stellaria media*.

Associations in San Mateo County

- *Hesperocyparis macrocarpa* Ruderal
- *Pinus radiata* plantations

Classification Comments

This alliance was created to encompass stands that are outside the natural range of these two rare species. Native stands of *Pinus radiata* occur in San Mateo County in a limited area around Ano Nuevo, and these are placed in the *Pinus muricata* – *Pinus radiata* Alliance.

***Notholithocarpus densiflorus* Forest Alliance**

Common Name: Tanoak forest

NVC Alliance Code: A3357. *Notholithocarpus densiflorus - Arbutus menziesii* Forest Alliance

Statewide Description

Notholithocarpus densiflorus is dominant or co-dominant in the tree canopy with *Acer macrophyllum*, *Alnus rubra*, *Arbutus menziesii*, *Calocedrus decurrens*, *Chamaecyparis lawsoniana*, *Chrysolepis chrysophylla*, *Cornus nuttallii*, *Pinus coulteri*, *Pinus lambertiana*, *Pseudotsuga menziesii*, *Quercus agrifolia*, *Quercus chrysolepis*, *Quercus kelloggii*, *Sequoia sempervirens*, *Torreya californica*, *Tsuga heterophylla*, and *Umbellularia californica*.

Stands of this alliance and others that contain *N. densiflorus* are often referred to as mixed evergreen forest (Sawyer 2006, 2007). Bingham's (1999) study found that stands dominated by *N. densiflorus* differed significantly in species composition and environmental conditions from stands containing a mix of *N. densiflorus* with other evergreens. Cooper's (1922) original concept of the mixed evergreen forest described mixed hardwood stands in the Santa Lucia Mountains. Munz (1959) and Whittaker (1960) expanded the term "mixed evergreen" to include *Pseudotsuga menziesii* – *Notholithocarpus densiflorus* stands. Forest ecologists have used the name "*Lithocarpus densiflorus* series" or "*Notholithocarpus densiflorus* Alliance" to refer to stands that have a low to moderate presence of conifers, such as

Notholithocarpus densiflorus Woodland Alliance

Pseudotsuga menziesii or *Sequoia sempervirens* (e.g., Atzet and Wheeler 1982, Jimerson et al. 1996). The National Vegetation Classification (NVC) places such stands in the *Pseudotsuga menziesii* – *Notholithocarpus densiflorus* or *Sequoia sempervirens* Alliances. Our concept of the *Notholithocarpus densiflorus* Alliance is one with minimal conifer cover and the main cover provided by tanoak with a variable proportion of other hardwoods. The shrub form of *Notholithocarpus densiflorus* (var. *echinoides*) has its own alliance.

Local Vegetation Description

The Tanoak forest Alliance forms an open to continuous tree canopy with a sparse to continuous shrub understory. The dominant tree is *Notholithocarpus densiflorus*, and *Arbutus menziesii*, *Pseudotsuga menziesii*, and *Sequoia sempervirens* are characteristic or often present. Commonly associated shrubs include *Vaccinium ovatum*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	8.0	0 – 30	35.0	10 – 50
Hardwood	66.3	20 – 95	21.3	10 – 35
Regenerating or Shrubby Tree	0.4	0 – 2.6	1.1	0 – 2
Shrub	24.9	0 – 80	2.0	1 – 5
Herb	1.0	0 – 10	0.3	0 – 0.5

Local Membership Rule

Notholithocarpus densiflorus is strongly dominant in the tree canopy or co-occurs with sub-dominant to co-dominant *Arbutus menziesii* or *Umbellularia californica*.

Local Environmental Description

Elevation: Mean 468 m, Range 123 – 698 m

Aspect: SE (2), NW (1), SW (1)

Slope: Mean 18 degrees, Range 11 – 22 degrees

Macro Topography: Upper 1/3 of slope (2), Bottom to Lower 1/3 of slope (1), Ridge top (1)

Large Rock: Mean 1.3%, Range 0.0 – 5.0%

Small Rock: Mean 0.2%, Range 0.0 – 0.4%

Fines Cover: Mean 5.5%, Range 0.0 – 15.0%

Litter Cover: Mean 90.0%, Range 82.0 – 96%

Soil Texture (field assessed): Medium to very fine, loamy sand (2), Medium to very fine, sandy loam (1), Moderately fine sandy clay loam (1)

Geology (field or map data): Shale and other sedimentary (6), Sandstone (3), Mixed alluvium (1)

San Mateo County Watersheds: Palo Alto (6), Ano Nuevo (1), Pescadero Creek (1), San Gregorio Creek (1), San Mateo Bayside (1)

Site Impacts

This alliance has very low non-native plant cover (average 0.1%) relative to native cover. Non-native species that occur with highest frequency and abundance include *Epipactis helleborine*.

***Pinus attenuata* Forest & Woodland Alliance**

Common Name: Knobcone pine forest and woodland

NVC Alliance Code: A3356. *Pinus attenuata* - *Pinus coulteri* - *Pinus sabiniana*
Woodland Alliance

Statewide Description

Pinus attenuata is dominant or co-dominant in the tree canopy with *Arbutus menziesii*, *Juniperus occidentalis*, *Notholithocarpus densiflorus*, *Pinus contorta*, *Pinus coulteri*, *Pinus monticola*, *Pinus radiata*, *Pinus sabiniana*, *Pseudotsuga menziesii*, *Quercus chrysolepis*, and *Quercus wislizeni*.

Stands of *Pinus attenuata* typically occur on nutrient-deficient soils with and without dense understories (Minnich 2007). They tend to vary regionally in size and occurrence; the trees in many stands are dense, forming closed canopies, while in other stands, trees are scattered and canopies are open. Associated vegetation is often chaparral, but in some regions, the surrounding vegetation includes coniferous forests, montane chaparral, and oak woodlands. Individual *Pinus attenuata* trees often emerge through shrub canopies in stands of many chaparral alliances.

Local Vegetation Description

The Knobcone pine forest and woodland Alliance forms an open tree canopy with an open to intermittent shrub understory. The dominant tree is *Pinus attenuata*, and *Pseudotsuga menziesii* and *Quercus chrysolepis* are characteristic or often present.

Regenerating or shrubby trees that are often present include *Chrysolepis chrysophylla* var. *minor*. Commonly associated shrubs include *Arctostaphylos crustacea*, *Vaccinium ovatum*, and *Arctostaphylos sensitiva*, and commonly associated herbs include *Lotus junceus*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	15.4	7 – 20	13.5	5 – 20
Hardwood	6.8	3 – 15	9.7	2 – 20
Regenerating or Shrubby Tree	1.9	0 – 7.5	3.3	0.5 – 10
Shrub	36.4	28 – 64	2.0	0.5 – 5
Herb	0.7	0.2 – 2	0.3	0 – 0.5

Local Membership Rule

Pinus attenuata dominates or co-dominates with *Quercus chrysolepis* in the tree overstory, often with moderately dense cover of shrubs such as *Arctostaphylos* spp. and *Vaccinium ovatum* in the understory.

Local Environmental Description

Elevation: Mean 449 m, Range 371 – 552 m

Aspect: SE (3), NW (3), SW (2)

***Pinus muricata – Pinus radiata* Forest & Woodland Alliance**

Common Name: Bishop pine – Monterey pine Forest and Woodland

NVC Alliance Code: A4097. *Pinus muricata - Pinus radiata* Woodland Alliance

Statewide Description

Pinus muricata or *Pinus radiata* is dominant or co-dominant in the tree canopy with *Abies grandis*, *Acer macrophyllum*, *Alnus rhombifolia*, *Arbutus menziesii*, *Hesperocyparis goveniana*, *Hesperocyparis pigmaea*, *Notholithocarpus densiflorus*, *Pinus attenuata*, *Pinus contorta* ssp. *bolanderi*, *Pinus contorta* ssp. *contorta*, *Pinus muricata*, *Pinus radiata*, *Pseudotsuga menziesii*, *Quercus agrifolia*, *Quercus tomentella*, *Quercus wislizeni*, *Salix lasiolepis*, *Salix scouleriana*, *Sequoia sempervirens*, *Tsuga heterophylla* or *Umbellularia californica*.

Pinus muricata grows on the mainland from Santa Barbara to Humboldt Cos., as well as on the Santa Cruz and Santa Rosa islands (Barbour 2007). It grows in areas with spring and summer fog, which is important to its survival (Cope 1993e). Chaparral surrounds stands in the La Purisima Hills that occur on diatomaceous mudstone (Cole 1980, Vogl et al. 1977), in the hills north of La Honda Canyon (Schmalzer et al. 1988) in Santa Barbara Co., and near Erendira in Baja California. Stands on the Channel Islands differ in species composition from one another and from those on the mainland (Philbrick and Haller 1977). In Humboldt and Mendocino Cos., *P. muricata* commonly occurs on shallow, poorly drained soils and mixes with *Hesperocyparis pigmaea*, *P. contorta*, *Pseudotsuga menziesii*, and *Sequoia sempervirens* (Westman and Whittaker 1975).

Pinus radiata is a fast-growing conifer that attains a height of 15-35 m and an age of 80-100 years. Trees produce cones at 5-10 years of age. Cones are generally serotinous

and open after a fire or on hot days. Trees have intermediate shade tolerance. Mainland trees grow on very windy, foggy slopes in the coastal marine layer. Trees exist in desert scrub on Cedros Island (McDonald and Laacke 1990). *Pinus radiata* is a rare CNPS list 1B.1 plant.

Local Vegetation Description

The Bishop pine – Monterey pine Alliance forms an open tree canopy with an intermittent shrub understory in the single sample available. The dominant tree is *Pinus radiata*. Other tree species present at low cover are *Hesperocyparis macrocarpa* and *Quercus agrifolia*. Commonly associated shrubs include *Rubus ursinus*, *Toxicodendron diversilobum*, *Ceanothus thyrsiflorus*, and *Heteromeles arbutifolia*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	31	NA	27.5	20 – 35
Hardwood	0	NA	no data	no data
Regenerating or Shubby Tree	0.4	NA	3.5	2 – 5
Shrub	48	NA	3.5	2 – 5
Herb	31	NA	0.3	0 – 0.5

Local Membership Rule

Naturally occurring stands of *Pinus radiata* or *Pinus muricata* dominant, co-dominant with conifers, or subdominant to hardwoods in the tree overstory and/or regenerating tree layer. The understory may include moderate to dense cover of shrubs such as *Arctostaphylos* spp., *Baccharis pilularis*, *Gaultheria shallon*, *Toxicodendron diversilobum* and *Vaccinium ovatum*. Most stands of Monterey Pine in San Mateo County are planted or naturalized except for a limited area between Ano Nuevo and Santa Cruz County.

Local Environmental Description

Elevation: 38 m

Aspect: SE (1)

Slope: 12 degrees

Macro Topography: Middle 1/3 of slope (1)

Large Rock: 0%

Small Rock: 1%

Fines Cover: 36%

Litter Cover: 60%

Soil Texture (field assessed): Not recorded (1)

Geology (field or map data): Sandstone and other sedimentary (1)

San Mateo County Watersheds: Ano Nuevo (1)

Site Impacts

This alliance has moderate non-native plant cover (average 28.0%) relative to native cover. Non-native species that occur with highest frequency and abundance include

Briza maxima, *Cynosurus echinatus*, and *Hesperocyparis macrocarpa*.

Associations in San Mateo County

- *Pinus radiata / Toxicodendron diversilobum*

Classification Comments

Native stands of *Pinus radiata* occur in San Mateo County in a limited area around Ano Nuevo.

***Platanus racemosa – Quercus agrifolia* Woodland Alliance**

Common Name: California sycamore – coast live oak riparian woodlands

NVC Alliance Code: A3750. *Platanus racemosa - Quercus agrifolia - Juglans californica* Riparian Woodland Alliance

Statewide Description

Platanus racemosa and/or *Quercus agrifolia* is dominant or co-dominant in the tree canopy in riparian habitats with *Alnus rhombifolia*, *Juglans californica*, *Populus fremontii*, *Quercus lobata*, *Salix exigua*, *Salix gooddingii*, *Salix laevigata*, *Salix lasiolepis*, *Salix lutea*, *Schinus molle*, and *Umbellularia californica*.

This alliance includes *Platanus racemosa* woodlands whose status and distribution throughout California were summarized by Keeler-Wolf et al. (1997). We have also included stands of co-dominant *P. racemosa* and *Populus fremontii* within this alliance, though Klein and Evens (2005) placed these stands in a separate *Platanus racemosa-Populus fremontii* alliance. In addition, this alliance has been expanded since the 2009 publication, *A Manual of California Vegetation, second edition*, to include riparian stands dominated by *Quercus agrifolia*. Upland stands of *Q. agrifolia* remain in the *Quercus agrifolia* Alliance.

Local Vegetation Description

The California sycamore – coast live oak riparian woodlands Alliance forms an open to intermittent tree canopy with an open to intermittent shrub understory. The dominant tree is *Quercus agrifolia*. Commonly associated shrubs include *Toxicodendron diversilobum*,

Platanus racemosa – Quercus agrifolia Woodland Alliance

and commonly associated herbs include *Bromus diandrus* and *Lolium perenne*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	0.0	0 – 0	no data	no data
Hardwood	42.5	30 – 55	12.5	10 – 15
Regenerating or Shrubby Tree	29.5	0 – 88.4	no data	no data
Shrub	25.5	16.0 – 35.0	3.5	2 – 5
Herb	30.0	20 – 40	0.5	0 – 1

Local Membership Rule

Quercus agrifolia dominates in a riparian setting, often with *Salix* spp. and *Toxicodendron diversilobum*.

Local Environmental Description

Elevation: Mean 103 m, Range 14 – 189 m

Aspect: NW (1), SW (1)

Slope: Mean 18 degrees, Range 16 – 19 degrees

Macro Topography: Middle 1/3 of slope (1), Middle to Upper 1/3 of slope (1)

Large Rock: Mean 0.0%, Range 0.0 – 0.0%

Small Rock: Mean 0.0%, Range 0.0 – 0.0%

Fines Cover: Mean 0.0%, Range 0.0 – 0.0%

Litter Cover: Mean 42.5%, Range 0.0 – 85%

Soil Texture (field assessed): Fine silty clay (1), Medium to very fine, sandy loam (1)

Geology (field or map data): Serpentine (1), Sandstone and other sedimentary (1), Alluvium (1)

San Mateo County Watersheds: San Mateo Bayside (1)

Other Watersheds, Marin Co.: Bolinas (1); **Santa Clara Co.:** Coyote Creek (1)

Site Impacts

This alliance has moderate non-native plant cover (average 20.5%) relative to native cover. Non-native species that occur with highest frequency and abundance include *Bromus diandrus*, *Bromus hordeaceus*, *Centaurea solstitialis*, *Cytisus scoparius*, *Epipactis helleborine*, *Genista monspessulana*, *Hordeum murinum*, *Lactuca serriola*, *Polypogon monspeliensis*, *Rubus armeniacus*, *Rumex crispus*, and *Solanum physalifolium*.

Associations in San Mateo County

- *Quercus agrifolia* / *Salix lasiolepis*

Classification Comments

Since the number of surveys of this alliance in San Mateo County is low, data from nearby counties were included.

***Quercus agrifolia / Salix lasiolepis* Association**

Common Name: Coast Live Oak / Arroyo Willow Woodland

Alliance: *Platanus racemosa – Quercus agrifolia* Woodland Alliance

Local Vegetation Description

The Coast Live Oak / Arroyo Willow Association forms an open to continuous tree canopy with an open shrub understory. The dominant tree is *Quercus agrifolia*, and *Quercus lobata* is often present.

Regenerating or shrubby trees that are often present include *Malus fusca*, *Quercus agrifolia*, and *Salix gooddingii*. Commonly associated shrubs include *Toxicodendron diversilobum*, *Baccharis pilularis*, *Diplacus aurantiacus*, *Frangula californica*, *Genista monspessulana*, *Rubus ursinus*, and *Salvia mellifera*, and commonly associated herbs include *Achillea millefolium*, *Avena* spp., *Bromus diandrus*, *Carex serratodens*, *Centaurea solstitialis*, *Elymus glaucus*, *Epipactis helleborine*, *Eschscholzia californica*, *Hordeum murinum*, *Iris douglasiana*, *Juncus arcticus*, *Juncus patens*, *Lactuca serriola*, *Lolium perenne* ssp. *multiflorum*, *Nassella pulchra*, *Polypogon interruptus*, *Polypogon monspeliensis*, *Solanum physalifolium*, *Solidago* spp., *Sonchus* spp., *Stachys pycnantha*, and *Verbena lasiostachys*.

and *Salix lutea*.

Populus fremontii is a
common plant at lower
elevations, but most
stands have endured
negative impacts from
reduced water availability
(through groundwater
pumping), livestock use,
hydrologic alterations and
irrigation schemes,
competition from non-
native plants, direct habitat
destruction, and other
human activities.

Populus fremontii may
dominate stands or mix

Statewide Description

Populus fremontii – *Fraxinus velutina* – *Salix gooddingii* Woodland Alliance

with other trees in riparian settings. Some uncertainty exists about the proper classification of mixed stands of *P. fremontii* and *Salix gooddingii*. Vaghti (2003) places these in the *P. fremontii* alliance; Hickson and Keeler-Wolf (2007), in a larger survey from the Sacramento Delta, suggest they are better placed in the *Salix gooddingii* alliance. Furthermore, uncertainty exists about mixed stands of *P. fremontii* and *Platanus racemosa*. Klein and Evens (2005) and Evens and San (2005) place co-dominant stands in a mixed alliance, but we place them in the *Platanus racemosa* alliance. *Populus fremontii* also occurs in mixed stands with additional co-dominant species in southern California, including *S. laevigata* and other willows (*S. lucida* and *S. lasiolepis*), *Quercus agrifolia*, and *Juglans californica* (Klein and Evens 2005, Stillwater Sciences and URS 2007).

Local Vegetation Description

The Fremont cottonwood forest and woodland Alliance forms a continuous tree canopy with an intermittent shrub understory in the single sample available. The single survey is from the grounds of Filoli Historic House & Garden, and may have been planted. The dominant tree is *Populus fremontii*.

Commonly associated shrubs include *Rubus ursinus*, *Baccharis salicifolia*, *Frangula californica*, *Ribes menziesii*, *Salix lasiolepis*, and *Toxicodendron diversilobum*, and commonly associated herbs include *Trillium ovatum*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	0.0	NA	no data	no data
Hardwood	90.0	NA	no data	no data
Regenerating or Shrubby Tree	0.0	NA	no data	no data
Shrub	65.0	NA	no data	no data
Herb	0.2	NA	no data	no data

Local Membership Rule

Populus fremontii dominates or co-dominates with *Acer negundo*, *Juglans*, and/or *Salix*, sometimes with *Populus* having as little as 5% absolute cover. If *Juglans hindsii* is dominant, but *Populus* has at least 20% relative cover in the tree layer, key to this alliance.

Local Environmental Description

Elevation: 105 m

Aspect: no data

Slope: no data

***Populus trichocarpa* Forest & Woodland Alliance**

Common Name: Black cottonwood forest and woodland

NVC Alliance Code: A3743. *Fraxinus latifolia* - *Populus balsamifera* ssp. *trichocarpa* - *Alnus* spp. Riparian Forest Alliance

Statewide Description

Populus trichocarpa is dominant or co-dominant in the tree canopy with *Abies concolor*, *Acer macrophyllum*, *Acer negundo*, *Alnus incana*, *Alnus rhombifolia*, *Alnus rubra*, *Fraxinus latifolia*, *Juniperus occidentalis*, *Morella californica*, *Pinus contorta* ssp. *murrayana*, *Pinus jeffreyi*, *Platanus racemosa*, *Populus fremontii*, *Populus tremuloides*, *Quercus agrifolia*, *Salix exigua*, *Salix hookeriana*, *Salix laevigata*, *Salix lasiolepis*, *Salix lucida* ssp. *lasiandra*, *Salix lutea* and *Salix scouleriana*.

The alliance in California occurs primarily in montane elevations and outer coastal regions, and it is largely lacking in the warm deserts and the Central Valley. A similar pattern occurs on a more local scale within the Santa Clara River watershed in Ventura County, where *Populus trichocarpa* stands are common along the river near the coast where summer fog is frequent; further inland (about 30 km from the coast), where hotter summer conditions prevail, they are replaced by stands of *P. fremontii*. However, *P. trichocarpa* stands also occur at mid to high elevations in the watershed along tributary streams, such as Sespe Creek (Stillwater Sciences and URS 2007, Stillwater Sciences 2007a). The largest low- elevation stands occur along the Eel River in Humboldt Co. In the Modoc region, this alliance occurs along persistent streams and

stands may be co-dominated by *P. tremuloides* (VegCAMP 2020). Typically, montane stands are small and widely dispersed. Stands are seasonally or intermittently flooded during winter floods and spring runoff. Moisture varies during the dry season, but despite dropping water tables in summer, soils can remain moist due to capillary action (Potter 2005).

Local Vegetation Description

The Black cottonwood forest and woodland Alliance forms an open to continuous tree canopy with an open to intermittent shrub understory. The dominant tree is *Populus trichocarpa*, and *Alnus rubra*, *Acer macrophyllum*, *Acer negundo*, *Salix lasiandra*, and *Umbellularia californica* are characteristic or often present. Regenerating or shrubby trees that are dominant and characteristic include *Populus trichocarpa*, and those that are often present include *Acer macrophyllum*, *Alnus rubra*, *Salix lasiandra*, and *Sequoia sempervirens*. Commonly associated shrubs include *Cornus sericea*, *Rubus ursinus*, *Salix lasiolepis*, *Sambucus racemosa*, and *Symporicarpos albus*, and commonly associated herbs include *Stachys bullata*, *Artemisia douglasiana*, *Calystegia purpurata*, *Conium maculatum*, *Delairea odorata*, *Ehrhartia erecta*, *Equisetum spp.*, *Equisetum telmateia*, *Geranium dissectum*, *Marah fabaceus*, *Scirpus microcarpus*, *Scrophularia californica*, *Urtica dioica*, and *Veronica americana*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	0.0	0 – 0	no data	
Hardwood	53.0	26 – 80	15.0	10 – 20
Regenerating or Shrubby Tree	1.4	0.4 – 2.4	2.5	1 – 5
Shrub	38.5	17 – 60	2.5	1 – 5
Herb	15.0	6 – 24	0.9	0 – 2

Local Membership Rule

Populus trichocarpa dominates or co-dominates with *Alnus rubra* in the tree overstory. Stands for this type will often have other riparian trees present. A variety of shrubs and herbs may be found in the understory, including *Cornus sericea*, *Rubus ursinus*, *Salix lasiolepis*, and *Stachys bullata*.

Local Environmental Description

Elevation: Mean 37 m, Range 13 – 61 m

Aspect: Flat (1), SW (1)

Slope: Mean 4 degrees, Range 0 – 8 degrees

Macro Topography: Bottom (1), Bottom to Lower 1/3 of slope (1)

Large Rock: Mean 0.0%, Range 0.0 – 0.0%

Small Rock: Mean 0.0%, Range 0.0 – 0.0%

Fines Cover: Mean 7.5%, Range 5.0 – 10.0%

Litter Cover: Mean 89.5%, Range 87.0 – 92%

Soil Texture (field assessed): Coarse, loamy sand (1), Unknown (1)

Geology (field or map data): Alluvium (1), Mixed alluvium (1)

San Mateo County Watersheds: Pescadero Creek (1), San Gregorio Creek (1)

Site Impacts

This alliance has low non-native plant cover (average 3.8%) relative to native cover. Non-native species that occur with highest frequency and abundance include *Conium maculatum*, *Delairea odorata*, *Ehrharta erecta*, and *Geranium dissectum*.

Associations in San Mateo County

***Pseudotsuga menziesii* – (*Notholithocarpus densiflorus* – *Arbutus menziesii*) Forest & Woodland Alliance**

Common Name: Douglas fir – (Tanok – Madrone) Forest and Woodland

NVC Alliance Code: A0106. *Pseudotsuga menziesii* - *Notholithocarpus densiflorus* Forest Alliance

Statewide Description

Pseudotsuga menziesii is dominant or co-dominant in the tree canopy with *Acer macrophyllum*, *Alnus rhombifolia*, *Arbutus menziesii*, *Chamaecyparis lawsoniana*, *Chrysolepis chrysophylla*, *Cornus nuttallii*, *Notholithocarpus densiflorus*, *Quercus agrifolia*, *Quercus chrysolepis*, *Quercus garryana*, *Quercus kelloggii*, and *Sequoia sempervirens*.

The ecological literature applies the term “Douglas fir forest” to stands of varying species composition (Fites-Kaufman et al. 2007, Sawyer 2006, 2007). Bingham (1999) developed a region-wide alliance-level classification for late-seral-stage forests based on relationships between species composition and major environmental gradients. Stands dominated by *Pseudotsuga menziesii* segregated significantly from other alliances. However, upon reinterpretation of data, *P. menziesii* is often mixed with other conifers in the montane zone. This complex relationship between *Pseudotsuga menziesii* and other conifers and hardwoods throughout northern California has led to the recognition of two other alliances, defined by the combinations of co-dominants: *Abies concolor* – *Pseudotsuga menziesii* Alliance and *Pinus ponderosa* – *Calocedrus decurrens* – *Pseudotsuga menziesii* Alliance. Other combinations, such as in the case

of *Pseudotsuga menziesii* – *Quercus chrysolepis* Association and *Pseudotsuga menziesii* – *Notholithocarpus densiflorus* associations, are included in this *Pseudotsuga menziesii* – (*Notholithocarpus densiflorus* – *Arbutus menziesii*) Alliance, such as in the North and Central Coast.

Local Vegetation Description

The Douglas fir forest and woodland Alliance forms an open to continuous tree canopy with a sparse to continuous shrub understory. The dominant tree is *Pseudotsuga menziesii*. Commonly associated shrubs include *Rubus ursinus*, *Toxicodendron diversilobum*, and *Frangula californica*, and commonly associated herbs include *Polystichum munitum*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	37.6	5 – 98	29.4	5 – 50
Hardwood	22.4	0 – 65	14.4	2 – 35
Regenerating or Shrubby Tree	3.1	0 – 46	2.4	1 – 5
Shrub	34.7	1 – 90	2.2	0 – 5
Herb	18.1	0 – 92	0.3	0 – 2

Local Membership Rule

Pseudotsuga menziesii is dominant or is co-dominant with *Arbutus menziesii*, *Quercus agrifolia*, *Q. chrysolepis*, *Notholithocarpus densiflorus*, or *Umbellularia californica*. Stands sampled in San Mateo County within 5-10 km of the coast.

Local Environmental Description

***Pseudotsuga menziesii* – (*Umbellularia californica*) / *Frangula californica* Association**

Common Name: Douglas-fir – California Bay / California Coffeeberry Woodland

Alliance: *Pseudotsuga menziesii* – (*Notholithocarpus densiflorus* – *Arbutus menziesii*) Forest & Woodland Alliance

Local Vegetation Description

The Douglas-fir – California Bay / California Coffeeberry Association forms an intermittent tree canopy with an intermittent to continuous shrub understory. The dominant tree is *Pseudotsuga menziesii*, and *Umbellularia californica* is characteristically present. Commonly associated shrubs include *Frangula californica*, *Rubus ursinus*, *Toxicodendron diversilobum*, and *Baccharis pilularis*, and commonly associated herbs include *Polystichum munitum*.

Pseudotsuga menziesii – Quercus agrifolia Association

Common Name: Douglas-fir / Coast Live Oak Woodland

Alliance: *Pseudotsuga menziesii* – (*Notholithocarpus densiflorus* – *Arbutus menziesii*)
Forest & Woodland Alliance

Local Vegetation Description

The Douglas-fir / Coast Live Oak Association forms an open to continuous tree canopy with an open to continuous shrub understory. The dominant tree is *Pseudotsuga menziesii*, and *Quercus agrifolia* and *Arbutus menziesii* are characteristic or often present. Commonly associated shrubs include *Rubus ursinus*, *Toxicodendron diversilobum*, *Frangula californica*, and *Lonicera hispidula*, and commonly associated herbs include *Dryopteris arguta* and *Polystichum munitum*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range

Shrub	24.5	4.0 – 45.0	2.5	1 – 5
Herb	48.0	4 – 92	0.3	0 – 0.5

Local Vegetation Description

The Douglas-fir – California Bay Association forms an intermittent to continuous tree canopy with an open to intermittent shrub understory. The dominant tree is *Pseudotsuga menziesii* and *Umbellularia californica*. Commonly associated shrubs include *Lonicera hispidula* and *Toxicodendron diversilobum*, and commonly associated herbs include *Polystichum munitum*.

Local Environmental Description

Elevation: Mean 300 m, Range 192 – 420 m

Aspect: SE (1), SW (1)

Slope: Mean 23 degrees, Range 20 – 25 degrees

Macro Topography: Lower 1/3 of slope (1), Upper 1/3 of slope (1)

Large Rock: Mean 1.5%, Range 0.0 – 3.0%

Small Rock: Mean 3.0%, Range 0.0 – 6.0%

Fines Cover: Mean 5.0%, Range 5.0 – 5.0%

Litter Cover: Mean 51.0%, Range 10.0 – 92%

Soil Texture (field assessed): Medium to very fine, sandy loam (1), Moderately fine silty clay loam (1)

Geology (field or map data): Granitic (1), Sandstone and other sedimentary (1), Shale and other sedimentary (1)

San Mateo County Watersheds: Half Moon Bay (2), Palo Alto (1)

Site Impacts

This association has low non-native plant cover (average 16.3%) relative to native cover. Non-native species that occur with highest frequency and abundance include *Delairea odorata* and *Erechtites minimus*.

Classification Comments

The name of this association has been updated to reflect the combination of two previously used names, *Pseudotsuga menziesii* – *Umbellularia californica* and *Pseudotsuga menziesii* – *Umbellularia californica* / *Toxicodendron diversilobum* Associations, formerly in the *Pseudotsuga menziesii* Alliance, into a single type.

Pseudotsuga menziesii – Umbellularia californica / (Toxicodendron diversilobum) Association
Pseudotsuga menziesii – (Notholithocarpus densiflorus – Arbutus menziesii) Forest & Woodland Alliance

Pseudotsuga menziesii – Umbellularia californica / Polystichum munitum Association

Common Name: Douglas-fir – California Bay / Sword Fern Woodland

Alliance: *Pseudotsuga menziesii* – (*Notholithocarpus densiflorus* – *Arbutus menziesii*) Forest & Woodland Alliance

Local Vegetation Description

The Douglas-fir – California Bay / Sword Fern Association forms an intermittent to continuous tree canopy with an open to continuous shrub understory. The dominant tree is *Pseudotsuga menziesii*, and *Umbellularia californica* is characteristically present. Commonly associated shrubs include *Rubus ursinus*, *Vaccinium ovatum*, *Sambucus racemosa*, *Corylus cornuta*, and *Toxicodendron diversilobum*. The dominant herb is *Polystichum munitum*.

Lifeform	Cover (%)		Height (m)	
	Mean	Range	Mean	Range
Conifer	58.3	40 – 85	42.5	35 – 50
Hardwood	16.0	3 – 30	10.5	2 – 20
Regenerating or Shrubby Tree	3.0	0 – 10.0	1.5	1 – 2
Shrub	50.0	26 – 80	2.1	0.5 – 5
Herb	49.7	30 – 75	1.0	0.5 – 2

Local Environmental Description

Elevation: Mean 388 m, Range 277 – 462 m

Aspect: NE (1), NW (1)

Slope: Mean 28 degrees, Range 27 – 29 degrees

Macro Topography: Middle 1/3 of slope (1), Upper 1/3 of slope (1)

Large Rock: 0.0%

Small Rock: Mean 3.0%, Range 1.0 – 5.0%

Fines Cover: 5.0%

Litter Cover: Mean 87.0%, Range 84.0 – 90%

Soil Texture (field assessed): Coarse, loamy sand (1), Moderately fine clay loam (1)

Geology (field or map data): Franciscan melange (1), Volcanic flow rocks (1), Granitic (1)

San Mateo County Watersheds: Half Moon Bay (1), Palo Alto (1), San Mateo Bayside (1)

Site Impacts

This association has low non-native plant cover (average 9.7%) relative to native

Pseudotsuga menziesii – Umbellularia californica / Polystichum munitum Association

Pseudotsuga menziesii – (Notholithocarpus densiflorus – Arbutus menziesii) Forest & Woodland Alliance

cover. Non-native species that occur with highest frequency and abundance include *Erechtites minimus* and *Myosotis latifolia*.

Classification Comments

This association was formerly placed in the *Pseudotsuga menziesii* Alliance.

Pseudotsuga menziesii / Corylus cornuta / Polystichum munitum Association

Pseudotsuga menziesii – (Notholithocarpus densiflorus – Arbutus menziesii) Forest & Woodland Alliance

Quercus (agrifolia, douglasii, garryana, kelloggii, lobata, wislizeni) Forest & Woodland Alliance

Common Name: Mixed oak forest and woodland

NVC Alliance Code: A0371. *Quercus agrifolia* - *Quercus douglasii* - *Quercus kelloggii*
Coastal Forest Alliance

Statewide Description

Quercus agrifolia, *Quercus douglasii*, *Quercus garryana*, *Quercus kelloggii*, *Quercus lobata* and/or *Quercus wislizeni* are co-dominant in the tree canopy with *Aesculus californica*, *Arbutus menziesii*, *Pinus sabiniana*, *Pseudotsuga menziesii*, and *Umbellularia californica*.

Allen et al. (1989, 1991) recognized a mixed oak series with 10 subseries; they based the subseries on the species composition of the woody plants since they lacked information on the herbaceous species. Their definition was followed in the 1995 edition of the *Manual of California Vegetation* (MCV) (Sawyer et al. 1995) and the subseries were listed as associations.

A careful study of the key (Allen et al. 1989, 1991) permitted some of the subseries to be placed in other alliances if the definitions allow the characteristic oak be co-dominant. For example, “valley oak and blue oak are co-dominant; coast live oak is present” becomes the *Quercus lobata* – *Quercus douglasii* Association in the *Quercus lobata* Alliance. The *Quercus wislizeni* – *Quercus douglasii* – *Pinus sabiniana* Association was placed in the

Quercus wislizeni Alliance because the third tree is not an oak. However, some subseries remain within this alliance, specifically when three or more oaks co-dominate.

Local Vegetation Description

The Mixed oak forest and woodland Alliance forms an open to intermittent tree canopy with an open shrub understory. The dominant tree is *Quercus agrifolia* and *Quercus lobata*, and *Quercus douglasii*. *Aesculus californica*, and *Umbellularia californica* are characteristic or often present. Commonly associated shrubs include *Toxicodendron diversilobum*, *Artemisia californica*, *Baccharis pilularis*, *Diplacus aurantiacus*, and *Rhamnus crocea*, and commonly associated herbs include *Bromus hordeaceus*, *Carduus pycnocephalus*, *Geranium dissectum*, *Lolium perenne*, *Sanicula crassicaulis*, *Achillea millefolium*, *Avena* spp., *Centaurea solstitialis*, *Chlorogalum pomeridianum*, *Claytonia perfoliata*, *Elymus glaucus*, *Erodium botrys*, *Galium* spp., *Hordeum jubatum*, *Leymus* spp., *Lupinus* spp., *Monardella* spp., *Ranunculus* spp., *Vicia villosa*, *Wyethia glabra*, and *Wyethia* spp..

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	0.0	0 – 0	no data	no data
Hardwood	29.0	25 – 33	12.5	5 – 20
Regenerating or Shrubby Tree	0.0	0 – 0	5.5	2 – 10
Shrub	5.5	4.0 – 7.0	1.5	1 – 2
Herb	30.0	30 – 30	0.3	0 – 0.5

Local Membership Rule

Quercus agrifolia, *Quercus douglasii*, and/or *Quercus lobata* are present and these oak species typically co-dominate. Other oaks such as *Q. chrysolepis* and *Q. kelloggii* may also be present. This mixed type is for stands where multiple *Quercus* tree species intermix and it is difficult to assign to an alliance defined by one oak species – read steps to key to individual oak alliances below.

Local Environmental Description

Elevation: Mean 169 m, Range 143 – 195 m

Aspect: SW (1), Variable (1)

Slope: Mean 4 degrees, Range 2 – 6 degrees

Macro Topography: Middle to Upper 1/3 of slope (1), Ridge top (1)

Large Rock: Mean 0.6%, Range 0.2 – 1.0%

Small Rock: Mean 5.1%, Range 0.2 – 10.0%

Fines Cover: Mean 11.5%, Range 2.0 – 21.0%

Litter Cover: Mean 78.5%, Range 65.0 – 92%

Soil Texture (field assessed): Moderately fine clay loam (1), Medium to very fine, loamy sand (1)

Geology (field or map data): Metamorphic (type unknown) (1), Greenstone (1)

San Mateo County Watersheds: Palo Alto (2)

Site Impacts

This alliance has moderate non-native plant cover (average 28.1%) relative to native cover. Non-native species that occur with highest frequency and abundance include *Bromus hordeaceus*, *Carduus pycnocephalus*, *Centaurea solstitialis*, *Erodium botrys*, *Geranium dissectum*, and *Vicia villosa*.

***Quercus agrifolia* Forest & Woodland Alliance**

Common Name: Coast live oak woodland and forest

NVC Alliance Code: A3346. *Quercus agrifolia* Woodland Alliance

Statewide Description

Quercus agrifolia is dominant or co-dominant in the tree canopy with *Acer macrophyllum*, *Acer negundo*, *Arbutus menziesii*, *Juglans californica*, *Platanus racemosa*, *Populus fremontii*, *Quercus douglasii*, *Quercus engelmannii*, *Quercus kelloggii*, *Quercus lobata*, *Salix lasiolepis*, and *Umbellularia californica*.

Stands of this extensive alliance vary from upland savannas and woodlands to moist north-facing slope forests with closed tree canopies (Allen-Diaz et al. 2007). Genetic variation is high in the species, with two main recognized varieties. Most plants represent *Quercus agrifolia* var. *agrifolia*; plants recognized as *Quercus agrifolia* var. *oxyadenia* in the Peninsular Ranges of southern California have hairs completely covering the lower leaf surfaces (Roberts 1995). *Quercus agrifolia* hybrids include *Quercus ×ganderi* (*Q. agrifolia* var. *oxyadenia* × *Q. kelloggii*) in San Diego County and *Quercus ×chasei* (*Q. agrifolia* var. *agrifolia* × *Q. kelloggii*) in Monterey and Santa Cruz Counties. The species also hybridizes with *Quercus dumosa*, *Q. lobata*, and *Q. wislizeni* to varying degrees (Kathleen et al. 2002, Dodd et al. 1993, Brophy and Parnell 1974). A shrub form, *Quercus agrifolia* var. *frutescens*, may only represent frequently burned or salt-spray-pruned plants. See the mixed oak (*Quercus wislizeni* – *Quercus chrysolepis*) shrub alliance for that distinction.

Local Vegetation Description

The Coast live oak woodland and forest Alliance forms an open to continuous tree canopy with an open to continuous shrub understory. The dominant tree is *Quercus agrifolia*, and *Arbutus menziesii* are characteristic or often present. Commonly associated shrubs include *Toxicodendron diversilobum*, *Frangula californica*, *Lonicera hispidula*, and *Rubus ursinus*, and commonly associated herbs include *Dryopteris arguta*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	2.8	0 – 15	27.5	15 – 50
Hardwood	48.0	0 – 90	11.3	2 – 20
Regenerating or Shrubby Tree	2.5	0 – 85.0	1.9	0.5 – 5
Shrub	39.1	4.0 – 95.0	2.9	0 – 10
Herb	20.3	0 – 65	0.4	0 – 2

Local Membership Rule

Quercus agrifolia dominates or co-dominates with *Arbutus menziesii* in the canopy in an upland setting. If *Q. douglasii* (or hybrid *Q. ×epplingii*), *Q. kelloggii*, *Q. lobata*, or *Umbellularia californica* is co-dominant to dominant, key to one of these other alliances instead of *Q. agrifolia*. The understory herbaceous layer often contains a mixture of native and non-native herbs and/or shrubs.

Local Environmental Description

Elevation: Mean 174 m, Range 48 – 382 m

Aspect: SW (4), NW (3), NE (1), SE (1)

Quercus agrifolia – Arbutus menziesii – Umbellularia californica Association

Common Name: Coast Live Oak – Madrone – California Bay Woodland

Alliance: *Quercus agrifolia* Forest & Woodland Alliance

Local Vegetation Description

The Coast Live Oak – Madrone – California Bay Association forms an open to continuous tree canopy with an open to continuous shrub understory. The co-dominant trees are *Arbutus menziesii* and *Quercus agrifolia*, and *Umbellularia californica* is often present. Commonly associated shrubs include *Toxicodendron diversilobum*, *Frangula californica*, *Heteromeles arbutifolia*, *Lonicera hispidula*, and *Rubus ursinus*, and commonly associated herbs include *Dryopteris arguta*, *Sanicula crassicaulis*, and *Stachys ajugoides*.

Local Environmental Description

Elevation: 244 m

Aspect: NW (1)

Slope: 5 degrees

Macro Topography: Middle 1/3 of slope (1)

Large Rock: 0.0%

Small Rock: 0.0%

Fines Cover: 15.0%

Litter Cover: 82%

Soil Texture (field assessed): Medium to very fine, sandy loam (1)

Geology (field or map data): Sandstone (1)

San Mateo County Watersheds: San Mateo Bayside (1)

Site Impacts

This association has low non-native plant cover (average 5.2%) relative to native cover. Non-native species that occur with highest frequency and abundance include *Briza maxima* and *Genista monspessulana*.

Classification Comments

This association is considered provisional since it is under-sampled in its expected range. It is newly described here. Due to hybridization and morphological similarity between the species, plants identified as *Quercus wislizeni* may be *Quercus parvula*, which has been found to be the most widespread genotype in San Mateo County (Dodd and Afzul-Rafii 2004, Hauser et al. 2017).

***Quercus agrifolia* / grass Association**

Common Name: California Live Oak / Annual Grass-Herb Woodland
Woodland Alliance: *Quercus agrifolia* Forest & Woodland Alliance

Local Vegetation Description

The California Live Oak / Annual Grass-Herb Woodland Association forms an intermittent tree canopy with an open shrub understory. The dominant tree is *Quercus agrifolia*, and *Umbellularia californica* is often present. Commonly associated shrubs include *Toxicodendron diversilobum*, and commonly associated herbs include *Avena* spp., *Briza maxima*, *Bromus diandrus*, *Carduus pycnocephalus*, and *Elymus glaucus*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range

***Quercus chrysolepis* (tree) Forest & Woodland Alliance**

Common Name: Canyon live oak forest and woodland

NVC Alliance Code: A3349. *Quercus chrysolepis* - *Quercus kelloggii* Forest & Woodland Alliance

Statewide Description

Quercus chrysolepis is dominant or co-dominant in the tree canopy with *Abies concolor*, *Acer macrophyllum*, *Arbutus menziesii*, *Calocedrus decurrens*, *Notholithocarpus densiflorus*, *Pinus coulteri*, *Pinus lambertiana*, *Pinus monophylla*, *Pinus ponderosa*, *Pseudotsuga menziesii*, *Quercus garryana* var. *garryana*, *Quercus kelloggii*, *Quercus wislizeni*, and *Umbellularia californica*.

Quercus chrysolepis grows on the east side of the Sierra Nevada, in the Mojave Desert, and in most of cismontane California typically at middle and upper elevations (Griffin and Critchfield 1972). *Quercus chrysolepis* is present in many different alliances and it shares dominance with several other tree species in this alliance (Allen-Diaz et al. 2007). Most *Quercus chrysolepis* stands that are free of recent major disturbance have trees of all sizes and all ages (Tirmenstein 1989b, Thornburgh 1990b).

Local Vegetation Description

The Canyon live oak forest and woodland Alliance forms an intermittent to continuous tree canopy with a sparse to open shrub understory. The dominant tree is *Quercus chrysolepis*, and *Quercus agrifolia*, *Umbellularia californica*, and *Pseudotsuga menziesii*

are characteristic or often present. Regenerating or shrubby trees that are dominant and characteristic include *Pseudotsuga menziesii*, *Quercus agrifolia*, *Quercus chrysolepis*, and *Umbellularia californica* and those that are often present include *Arbutus menziesii* and *Notholithocarpus densiflorus*. Commonly associated shrubs include *Rubus ursinus*, *Lonicera hispidula*, *Rosa gymnocarpa*, *Toxicodendron diversilobum*, *Corylus cornuta*, and *Symporicarpos albus*, and commonly associated herbs include *Osmorhiza berteroii*, *Sanicula crassicaulis*, *Claytonia perfoliata*, *Clinopodium douglasii*, *Dryopteris arguta*, *Fragaria vesca*, *Iris spp.*, *Lathyrus vestitus*, *Madia madioides*, *Stachys ajugoides*, and *Torilis arvensis*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	7.5	0 – 15	27.5	20 – 35
Hardwood	65.0	55 – 75	18.8	10 – 35
Regenerating or Shrubby Tree	4.3	0.8 – 7.8	3.0	1 – 5
Shrub	8.8	0.0 – 26.0	0.8	0.5 – 1
Herb	4.6	0.2 – 10	0.4	0 – 1

Local Membership Rule

Quercus chrysolepis is dominant or co-dominant with *Arbutus menziesii* or *Umbellularia californica* in the tree overstory. *Quercus wislizeni* is occasionally found as a sub-dominant tree.

Local Environmental Description

Elevation: Mean 702 m, Range 654 – 755 m

Aspect: SW (2), NE (1), SE (1)

Slope: Mean 19 degrees, Range 15 – 22 degrees

Macro Topography: Upper 1/3 of slope (3), Middle 1/3 of slope (1)

Large Rock: Mean 0.2%, Range 0.0 – 0.6%

Small Rock: Mean 0.2%, Range 0.0 – 0.4%

Fines Cover: Mean 6.6%, Range 0.2 – 20.0%

Litter Cover: Mean 90.8%, Range 79.0 – 97%

Soil Texture (field assessed): Moderately fine silty clay loam (3), Medium to very fine, loamy sand (1)

Geology (field or map data): Sandstone (4)

San Mateo County Watersheds: Pescadero Creek (2), Palo Alto (1), San Gregorio Creek (1)

Site Impacts

This alliance has very low non-native plant cover (average 0.3%) relative to native cover. Non-native species that occur with highest frequency and abundance include *Cynosurus echinatus*, *Stellaria media*, *Torilis arvensis*, and *Vicia sativa*.

San Mateo County Watersheds: Palo Alto (1), Pescadero Creek (1), San Gregorio Creek (1)

Site Impacts

This association has very low non-native plant cover (average 0.2%) relative to native cover. Non-native species that occur with highest frequency and abundance include

Torilis arvensis and *Vicia sativa*.

Classification Comments

None.

Quercus chrysolepis / Quercus (wislizeni, parvula) Association

Common Name: Canyon Live Oak / Shrub Interior Live Oak Woodland

Alliance: *Quercus chrysolepis* (tree) Forest & Woodland Alliance

Local Vegetation Description

The Canyon Live Oak / Shrub Interior Live Oak Association forms an intermittent tree canopy with an open shrub understory. The dominant tree is *Quercus chrysolepis*, and those that are characteristic or often present include *Pseudotsuga menziesii*, *Umbellularia californica*, *Quercus parvula*, and *Quercus wislizeni*. The same species are often present in the regenerating or shrubby tree layer. Commonly associated shrubs include *Corylus cornuta*, *Rubus ursinus*, and *Symphoricarpos mollis*, and commonly associated herbs include *Carduus pycnocephalus*, *Fragaria vesca*, *Polystichum munitum*, and *Stachys ajugoides*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	7.5	0 – 15	27.5	20 – 35
Hardwood	51.0	47 – 55	12.5	5 – 20
Regenerating or Shrubby Tree	5.0	3 – 7	3.5	2 – 5
Shrub	3.5	2 – 5	0.8	0.5 – 1
Herb	4.5	4 – 5	0.5	0 – 1

Local Environmental Description

Elevation: Mean 621 m, Range 487 – 755 m

Aspect: NE (1), SW (1)

Slope: Mean 28 degrees, Range 18 – 37 degrees

Macro Topography: Upper 1/3 of slope (2)

Large Rock: Mean 2.0%, Range 0.0 – 4%

Small Rock: Mean 0.6%, Range 0.2 – 1%

Fines Cover: Mean 7.6%, Range 0.2 – 15%

Litter Cover: Mean 87.5%, Range 78 – 97%

Soil Texture (field assessed): Moderately fine sandy clay loam (1), Moderately fine silty clay loam (1)

Geology (field or map data): Franciscan mélange (1), Sandstone (1)

San Mateo County Watersheds: Pescadero Creek (1)

Other Watersheds, Marin Co.: Lagunitas Creek (1)

Site Impacts

This association has low non-native plant cover (average 1.3%) relative to native cover.

Non-native species that occur with highest frequency and abundance include *Carduus pycnocephalus*.

Classification Comments

Due to hybridization and morphological similarity between the species, plants identified as *Quercus wislizeni* may be *Quercus parvula*, which has been found to be the most widespread genotype in Marin County (Dodd and Afzul-Rafii 2004, Hauser et al. 2017). The name of the association has been updated to reflect the prevalence of *Q. parvula*. Since the number of surveys of this association in San Mateo County is low, data from nearby counties were included.

***Quercus chrysolepis* Association**

Common Name: Canyon Live Oak Woodland

Alliance: *Quercus chrysolepis* (tree) Forest & Woodland Alliance

Local Vegetation Description

The Canyon Live Oak Association forms an intermittent tree canopy with an open shrub understory in the single survey available. The dominant tree is *Quercus chrysolepis*, and *Pinus attenuata* are characteristic or often present. Regenerating or shrubby trees that are dominant and characteristic include *Pseudotsuga menziesii* and *Quercus chrysolepis*. Commonly associated shrubs include *Arctostaphylos crustacea*.

Lifeform	Cover (%)		Height (m)	
	Mean	Range	Mean	Range
Conifer	0.2	NA	7.5	5 – 10
Hardwood	35.0	NA	7.5	5 – 10
Regenerating or Shrubby Tree	3.2	NA	1.5	1 – 2
Shrub	3.0	NA	1.5	1 – 2
Herb	0.0	NA	no data	

Local Environmental Description

Elevation: 394 m

Aspect: SW (1)

Slope: 35 degrees

Macro Topography: Upper 1/3 of slope (1)

Large Rock: 0.0%

Small Rock: 25.0%

Fines Cover: 23.0%

Litter Cover: 50%

Soil Texture (field assessed): Moderately fine sandy clay loam (1)

Geology (field or map data): Siltstone (1)

San Mateo County Watersheds: none

Other Watersheds, Santa Cruz Co.: Ano Nuevo (1)

Site Impacts

This association has very low non-native plant cover (average 0.0%) relative to native cover. No non-native species were recorded by the surveyors.

Classification Comments

While there were no surveys from San Mateo County, the single survey was near the county line.

***Quercus douglasii* Forest & Woodland Alliance**

Common Name: Blue oak woodland and forest

NVC Alliance Code: A3348. *Quercus douglasii* - *Pinus sabiniana* Woodland Alliance

Statewide Description

Quercus douglasii is dominant or co-dominant in the tree canopy with *Aesculus californica*, *Juniperus californica*, *Pinus sabiniana*, *Quercus agrifolia*, *Quercus lobata*, and *Quercus wislizeni*.

The *Quercus douglasii* Alliance, in its varied forms, is one of the most extensive and conspicuous oak woodland vegetation types in the state. In some cases, oak savannas of *Quercus douglasii* trees are scattered across the landscape, and in other cases, trees of mixed composition form a closed tree canopy. Genetic variation is high in the species. Environmental factors controlling this variation include moisture availability, substrate, fire, and other disturbances (Allen-Diaz and Bartolome 1992, Allen-Diaz et al. 2007, Keeley 2002c). Named *Quercus douglasii* hybrids include those with *Q. john-tuckeri* (*Quercus* × *alvordiana*), *Q. garryana* (*Quercus* × *eplingii*), and *Q. lobata* (*Quercus* × *jolonensis*) (Griffin and Critchfield 1972).

Local Vegetation Description

The Blue oak woodland and forest Alliance forms an open to intermittent tree canopy with an open shrub understory. The dominant tree is *Quercus douglasii*, and *Quercus agrifolia*, *Aesculus californica*, and *Arbutus menziesii* are characteristic or often present.

Regenerating or shrubby trees that are often present include *Arbutus menziesii* and *Quercus agrifolia*. Commonly associated shrubs include *Heteromeles arbutifolia*, *Lonicera hispidula*, *Toxicodendron diversilobum*, *Artemisia californica*, *Rhamnus crocea*, and *Symphoricarpos mollis*, and commonly associated herbs include *Achillea millefolium*, *Chlorogalum pomeridianum*, *Bromus carinatus*, *Bromus diandrus*, *Elymus glaucus*, *Geranium dissectum*, *Lolium perenne*, and *Pedicularis densiflora*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	0.3	0 – 1	1.5	1 – 2
Hardwood	33.8	24 – 41	8.8	5 – 15
Regenerating or Shrubby Tree	0.7	0 – 1.8	2.3	0.5 – 5
Shrub	15.5	11.0 – 20.0	1.6	0.5 – 5
Herb	23.5	15 – 34	0.5	0 – 1

Local Membership Rule

Quercus douglasii dominates or co-dominates with *Quercus agrifolia* or *Arbutus menziesii* in the tree overstory. The understory herbaceous layer is often moderately dense to dense, with a mixture of native and non-native forbs and grasses.

Local Environmental Description

Elevation: Mean 144 m, Range 113 – 164 m

Aspect: NE (2), SE (1), Variable (1)

Slope: Mean 13 degrees, Range 10 – 22 degrees

Macro Topography: Upper 1/3 of slope (2), Middle to Upper 1/3 of slope (1), Middle 1/3 of slope (1)

Large Rock: Mean 0.3%, Range 0.0 – 1.0%

Small Rock: Mean 0.1%, Range 0.0 – 0.4%

Fines Cover: Mean 16.0%, Range 2.0 – 37.0%

Litter Cover: Mean 80.5%, Range 60.0 – 95%

Soil Texture (field assessed): Fine sandy clay (1), Moderately fine clay loam (1), Coarse, loamy sand (1), Moderately fine sandy clay loam (1)

Geology (field or map data): Sedimentary (type unknown) (2), Franciscan melange (1), Sandstone (1)

San Mateo County Watersheds: Palo Alto (2), San Mateo Bayside (1)

Other Watersheds, Santa Clara Co.: Palo Alto (1)

Site Impacts

This alliance has moderate non-native plant cover (average 28.5%) relative to native cover. Non-native species that occur with highest frequency and abundance include *Brachypodium distachyon*, *Briza maxima*, *Bromus diandrus*, *Bromus hordeaceus*, *Carduus pycnocephalus*, *Centaurea melitensis*, *Centaurea solstitialis*, *Crataegus monogyna*, *Genista monspessulana*, *Geranium dissectum*, *Hordeum murinum*, *Olea europaea*, *Torilis arvensis*, *Trifolium hirtum*, and *Vicia sativa*.

Associations in San Mateo County

- *Quercus douglasii* – *Quercus agrifolia*
- *Quercus douglasii* / Mixed herbaceous

Classification Comments

Since the number of surveys of this alliance in San Mateo County is low, data from nearby counties were included.

***Quercus douglasii* – *Quercus agrifolia* Association**

Common Name: Blue Oak – Coast Live Oak Woodland

Alliance: *Quercus douglasii* Forest & Woodland Alliance

Local Vegetation Description

The Blue Oak – Coast Live Oak Association forms an open to intermittent tree canopy with an open shrub understory. The dominant tree is *Quercus douglasii*, and *Quercus agrifolia* is characteristic and often present. Regenerating or shrubby trees that are often present include *Quercus agrifolia*. Commonly associated shrubs include *Heteromeles arbutifolia*, *Toxicodendron diversilobum*, *Artemisia californica*, *Lonicera hispidula*, and *Symphoricarpos mollis*, and commonly associated herbs include *Chlorogalum pomeridianum*, *Achillea millefolium*, *Bromus diandrus*, and *Geranium dissectum*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	0.5	0 – 1	1.5	1 – 2

Regenerating or Shrubby Tree	0.9	0 – 1.8	2.8	1 – 5
Shrub	10.0	5 – 15	1.0	0.5 – 2
Herb	31.7	15 – 55	0.4	0 – 1

Local Environmental Description

Elevation: Mean 139 m, Range 113 – 164 m

Aspect: NE (2), SE (1)

Slope: Mean 14 degrees, Range 10 – 22 degrees

Macro Topography: Middle 1/3 of slope (1), Middle to Upper 1/3 of slope (1), Upper 1/3 of slope (1)

Large Rock: 0.0%

Small Rock: 0.0%

Fines Cover: Mean 14.3%, Range 2.0 – 37.0%

Litter Cover: Mean 82.3%, Range 60.0 – 95%

Soil Texture (field assessed): Fine sandy clay (1), Moderately fine clay loam (1),
Moderately fine sandy clay loam (1)

Geology (field or map data): Sandstone (1), Sedimentary (type unknown) (1),
Franciscan melange (1)

San Mateo County Watersheds: Palo Alto (1), San Mateo Bayside (1)

Other Watersheds, Santa Clara Co.: Palo Alto (1)

Site Impacts

This association has moderate non-native plant cover (average 25.4%) relative to native cover. Non-native species that occur with highest frequency and abundance include

Quercus douglasii – *Quercus agrifolia* Association
Quercus douglasii Woodland Alliance

Pinus radiata, *Bromus diandrus*, *Geranium dissectum*, *Achillea millefolium*, *Hordeum murinum*, and *Carduus pycnocephalus*.

Classification Comments

Formerly there was an analogous co-dominant association in the *Quercus agrifolia* Alliance (*Quercus agrifolia* – *Quercus douglasii*), which has been subsumed into this association. Since the number of surveys of this association in San Mateo County is low, data from nearby counties were included.

***Quercus douglasii* / Mixed herbaceous Association**

Common Name: Blue Oak / Mixed herb Woodland

Alliance: *Quercus douglasii* Forest & Woodland Alliance

Local Vegetation Description

The Blue Oak / Mixed herb Association forms an intermittent tree canopy with an open shrub understory in the single survey available. The dominant tree is *Quercus douglasii*, and *Aesculus californica*, *Arbutus menziesii*, and *Quercus agrifolia* are characteristic or often present. Regenerating or shrubby trees that are dominant and characteristic include *Arbutus menziesii*. Commonly associated shrubs include *Heteromeles arbutifolia*, *Toxicodendron diversilobum*, *Cercocarpus betuloides*, *Cotoneaster* spp., *Crataegus monogyna*, *Genista monspessulana*, *Lonicera hispidula*, and *Rhamnus crocea* and commonly associated herbs include *Brachypodium distachyon*, *Achillea millefolium*, *Briza maxima*, *Bromus carinatus*, *Bromus laevipes*, *Cordylanthus pilosus*, *Elymus glaucus*, *Lolium perenne* ssp. *multiflorum*, *Pedicularis densiflora*, *Perideridia kelloggii*, *Trifolium hirtum*, *Triteleia laxa*, and *Wyethia glabra*, .

***Quercus kelloggii* Forest & Woodland Alliance**

Common Name: California black oak forest and woodland

NVC Alliance Code: A3349. *Quercus chrysolepis* - *Quercus kelloggii* Forest & Woodland Alliance

Statewide Description

Quercus kelloggii is dominant or co-dominant in the tree canopy with *Abies concolor*, *Arbutus menziesii*, *Calocedrus decurrens*, *Pinus attenuata*, *Pinus ponderosa*, *Pseudotsuga menziesii*, *Quercus agrifolia*, *Quercus chrysolepis*, *Quercus garryana*, *Quercus lobata*, and *Umbellularia californica*.

The range of *Quercus kelloggii* is sufficiently wide that it mixes with many species in many alliances (Gaman and Casey 2002), though it tends to occur in higher elevations than most tree oaks other than *Q. chrysolepis*. The *Quercus kelloggii* Alliance occurs from the foothills to mid-montane elevations, from the Coast Ranges to the Klamath Mountains and the western Sierra Nevada (Barbour et al. 2007a). Conifers replace *Quercus kelloggii* on productive sites in the absence of fire. Conifer replacement is slower or lacking on unproductive sites (Howard 1992l). Stands commonly have *Pinus ponderosa*, *Pinus sabiniana*, and less commonly *Pinus jeffreyi*.

Local Vegetation Description

The California black oak forest and woodland Alliance forms an open to continuous tree canopy with a sparse to intermittent shrub understory. The dominant tree is *Quercus kelloggii* Woodland Alliance

kelloggii, and *Arbutus menziesii*, *Quercus agrifolia*, and *Umbellularia californica* are characteristic or often present. Commonly associated shrubs include *Toxicodendron diversilobum*, and commonly associated herbs include *Avena* spp., *Briza maxima*, *Carduus pycnocephalus*, and *Vicia sativa*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	0.6	0 – 2	15.0	10 – 20
Hardwood	49.3	20 – 75	11.7	5 – 20
Regenerating or Shrubby Tree	2.4	0 – 23.6	3.5	2 – 5
Shrub	8.0	0.0 – 40.0	3.3	0.5 – 10
Herb	43.3	10 – 95	0.4	0 – 1

Local Membership Rule

Quercus kelloggii or *Quercus × morehus* dominates or co-dominates with *Pseudotsuga menziesii*, *Q. agrifolia*, and/or *Umbellularia californica* in the tree overstory. *Arbutus menziesii* is often present as a sub-dominant species. Stands in San Mateo County are found inland, above maritime influence, often on northerly slopes.

Local Environmental Description

Elevation: Mean 202 m, Range 50 – 622 m

Aspect: NW (6), NE (1), SW (1), Variable (1)

Slope: Mean 21 degrees, Range 12 – 32 degrees

Macro Topography: Middle 1/3 of slope (4), Upper 1/3 of slope (4), Not recorded (1)

Large Rock: Mean 0.1%, Range 0.0 – 0.2%

Small Rock: Mean 0.3%, Range 0.0 – 1.2%

Fines Cover: Mean 10.3%, Range 0.0 – 68.0%

Litter Cover: Mean 58.2%, Range 0.0 – 94%

Soil Texture (field assessed): Moderately coarse, sandy loam (4), Medium to very fine, sandy loam (2), Moderately fine clay loam (2), Moderately fine sandy clay loam (1)

Geology (field or map data): Franciscan melange (6), Blueschist and semi-schist (2), Mixed sedimentary (1), Sandstone and other sedimentary (1)

San Mateo County Watersheds: Palo Alto (1)

Other Watersheds, Marin Co.: Lagunitas Creek (3), Petaluma River (3), San Rafael (2), Novato (1)

Site Impacts

This alliance has moderate non-native plant cover (average 26.6%) relative to native cover. Non-native species that occur with highest frequency and abundance include *Briza maxima*, *Bromus diandrus*, *Carduus pycnocephalus*, *Cynosurus echinatus*, *Torilis arvensis*, *Torilis nodosa*, and *Vicia sativa*.

Associations in San Mateo County

Quercus kelloggii – Arbutus menziesii – Quercus agrifolia Association

Common Name: California Black Oak – Madrone – Coast Live Oak Woodland

Alliance: *Quercus kelloggii* Forest & Woodland Alliance

Local Vegetation Description

The California Black Oak – Madrone – Coast Live Oak Association forms an intermittent tree canopy with an open shrub understory in the single survey available. The dominant tree is *Quercus kelloggii*, and *Arbutus menziesii*, *Quercus agrifolia*, and *Umbellularia californica* are characteristic or often present.

Commonly associated shrubs include *Toxicodendron diversilobum*, and commonly associated herbs include *Avena* spp., *Briza maxima*, *Carduus pycnocephalus*, and *Vicia sativa*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	2.0	NA	17.5	15 – 20

***Quercus lobata* Forest & Woodland Alliance**

Common Name: Valley oak woodland and forest

NVC Alliance Code: A3347. *Quercus lobata* Woodland Alliance

Statewide Description

Quercus lobata is dominant or co-dominant in the tree canopy with *Acer negundo*, *Alnus rhombifolia*, *Fraxinus latifolia*, *Juglans hindsii*, *Juglans hindsii × regia*, *Platanus racemosa*, *Populus fremontii*, *Quercus agrifolia*, *Quercus douglasii*, *Quercus kelloggii*, *Quercus wislizeni*, *Salix gooddingii*, and *Salix lasiolepis*. Shrubs and lianas may include *Aristolochia californica* or *Vitis californica*.

Quercus lobata is endemic to California, and stands vary from open savannas to closed-canopy forests (Allen-Diaz et al. 2007). Riparian and upland forests of *Quercus lobata* occur in the deep, rich soil typical of floodplains and valley floors. This alliance includes the upland forests. These forests are only remnants of what once existed in the Central Valley, other valleys, and foothill locations (Allen-Diaz et al. 2007).

Local Vegetation Description

The Valley oak woodland and forest Alliance forms an open to intermittent tree canopy with a sparse to open shrub understory. The dominant tree is *Quercus lobata*, and *Quercus agrifolia* are characteristic or often present. Commonly associated shrubs include *Toxicodendron diversilobum* and *Baccharis pilularis*, and commonly associated herbs include *Avena* spp., *Bromus diandrus*, *Carduus pycnocephalus*, *Elymus glaucus*,

Achillea millefolium, *Geranium dissectum*, *Lolium perenne*, *Sanicula crassicaulis*, and *Vicia sativa*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	0.0	0 – 0.2	7.5	5 – 10
Hardwood	28.0	11 – 35	10.0	5 – 15
Regenerating or Shrubby Tree	3.9	0 – 28.0	0.8	0 – 2
Shrub	1.7	0.0 – 5.0	1.0	0.5 – 2
Herb	49.2	30 – 65	0.3	0 – 1

Local Membership Rule

Quercus lobata dominates or co-dominates with *Quercus agrifolia* and/or *Umbellularia californica* in the tree overstory in an upland habitat. Stands are typically found on slopes and summit valleys with an open grassy understory and *Toxicodendron diversilobum* is a common understory shrub.

Local Environmental Description

Elevation: Mean 193 m, Range 23 – 653 m

Aspect: NE (3), NW (2), SE (1), Variable (1), Flat (1)

Slope: Mean 11 degrees, Range 0 – 30 degrees

***Quercus wislizeni* – *Quercus parvula* (tree) Forest & Woodland Alliance**

Common Name: Interior live oak woodland and forest

NVC Alliance Code: A3348. *Quercus douglasii* - *Pinus sabiniana* Woodland Alliance

Statewide Description

Quercus wislizeni or *Quercus parvula* is dominant or co-dominant in the tree canopy with *Acer macrophyllum*, *Aesculus californica*, *Arbutus menziesii*, *Notholithocarpus densiflorus*, *Pinus sabiniana*, *Pseudotsuga menziesii*, *Quercus agrifolia*, *Quercus chrysolepis*, *Quercus douglasii*, *Quercus kelloggii*, *Sequoia sempervirens*, and *Umbellularia californica*.

Quercus parvula var. *shrevei* is a large tree of low elevation, coastal forests in central California. It has been confused with *Quercus wislizeni* for many years. Current taxonomic research individuates *Q. p. var. shrevei* from *Q. wislizeni* and also suggests a close relationship to *Q. agrifolia* (Nixon 1980, Kashani and Dodd 2002, Hauser et al. 2017). Most references to stands of *Q. wislizeni* in the mixed evergreen forests of the outer central Coast Ranges (e.g., Sawyer and Keeler-Wolf 1995, Thomas 1961) appear now to be

Q. p. var. shrevei (Dodd et al. 2002, Hauser et al. 2017). However, oaks north of San Francisco in the North Coast and North Coast Ranges appear to be a hybrid swarm of *Q. parvula* and *Q. wislizeni*, with some mixing of *Q. agrifolia*, and a new subspecies of *Q. parvula* var. *tamalpaisensis* was noted as a narrow endemic from Mt. Tamalpais

(Dodd and Afzal-Rafii 2004, Hauser et al. 2017). For this reason, we have combined the two species into a single alliance since the 2009 publication of *A Manual of California Vegetation, second edition*.

Unlike *Q. agrifolia* and *Q. wislizeni*, *Q. parvula* var. *shrevei* usually occurs as tall single-trunked trees within a matrix of conifers and broadleaf, evergreen trees. Stands are closely associated with but distinct from stands of *Sequoia sempervirens* or *Umbellularia californica* alliances. Stands are typically intermediate in moisture conditions between redwood and coast live oak alliances. Stands of *Q. parvula* often form dense forests on slopes and on the margins of continuous *S. sempervirens* forest patches.

Stands of this extensive alliance vary from savannas to closed forests, but commonly they form woodlands (Allen-Diaz et al. 2007). The tree form of *Q. w. var. wislizeni* is also distinguished from the shrub form (var. *frutescens*), but form and height may be only the result of high fire frequencies (White and Sawyer 1995). The species also hybridizes with other oaks. The most commonly encountered hybrid is the deciduous *Q. xmorehus* (*Q. kelloggii* x *Q. wislizeni*).

Local Vegetation Description

The Interior live oak woodland and forest Alliance forms an open to intermittent tree canopy with an open to intermittent shrub understory. The dominant tree is *Quercus parvula* var. *shrevei*, and *Umbellularia californica*, *Arbutus menziesii*, and *Pseudotsuga menziesii* are characteristic or often present.

Regenerating or shrubby trees that are often present include *Arbutus menziesii*, *Pseudotsuga menziesii*, and *Quercus parvula* var. *shrevei*. Commonly associated shrubs include *Rubus ursinus*, *Heteromeles arbutifolia*, *Lonicera hispidula*, *Toxicodendron diversilobum*, *Frangula californica*, and *Symporicarpos mollis*, and commonly associated herbs include *Dryopteris arguta*, *Adenocaulon bicolor*, *Galium aparine*, and *Myosotis latifolia*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	5.7	0 – 15	27.5	20 – 35
Hardwood	41.7	20 – 55	14.2	5 – 20
Regenerating or Shrubby Tree	14.8	0 – 55.4	2.2	1 – 5
Shrub	36.2	15 – 70	1.9	0.5 – 5
Herb	5.7	2 – 10	0.3	0 – 0.5

Local Membership Rule

The tree form of *Quercus parvula* and/or *Q. wislizeni* dominates or co-dominates in the tree canopy, often with *Arbutus menziesii*, *Pseudotsuga menziesii*, and/or *Umbellularia californica*.

Local Environmental Description

Elevation: Mean 216 m, Range 20 – 325 m

Aspect: SE (1), SW (1), Variable (1), NE (1)

Slope: Mean 13 degrees, Range 10 – 15 degrees

Quercus wislizeni – *Quercus parvula* (tree) Woodland Alliance

Macro Topography: Middle 1/3 of slope (1), Not recorded (1), Upper 1/3 of slope (1), Upper 1/3 of slope to Ridgetop (1)

Large Rock: Mean 0.0%, Range 0.0 – 0.0%

Small Rock: Mean 0.1%, Range 0.0 – 0.2%

Fines Cover: Mean 2.5%, Range 0.2 – 7.0%

Litter Cover: Mean 94.0%, Range 90.0 – 97%

Soil Texture (field assessed): Medium loam (1), Moderately fine sandy clay loam (1), Moderately fine silty clay loam (1), Not recorded (1)

Geology (field or map data): Siltstone (1), Sandstone, shale, and conglomerate (1), Sandstone and other sedimentary (1), Sandstone (1)

San Mateo County Watersheds: Pescadero Creek (2), Ano Nuevo (1), San Mateo Bayside (1)

Site Impacts

This alliance has very low non-native plant cover (average 0.4%) relative to native cover. Non-native species that occur with highest frequency and abundance include *Ehrharta erecta*, *Epipactis helleborine*, *Myosotis latifolia*, and *Torilis arvensis*.

Associations in San Mateo County

- *Quercus (parvula, wislizeni)* – *Arbutus menziesii* / *Toxicodendron diversilobum*

Classification Comments

None. Since the number of surveys of this alliance in San Mateo County is low, data from nearby counties were included.

Quercus (parvula, wislizeni) – Arbutus menziesii / Toxicodendron diversilobum Association

Common Name: Interior Live Oak – Madrone / Poison-oak Woodland

Alliance: *Quercus wislizeni* – *Quercus parvula* (tree) Forest & Woodland Alliance

Local Vegetation Description

The Interior Live Oak – Madrone / Poison-oak Association forms an intermittent tree canopy with an open to continuous shrub understory. *Quercus parvula* or *Quercus wislizeni* is the dominant tree, while *Arbutus menziesii* is often present. Commonly associated shrubs include *Toxicodendron diversilobum*, *Heteromeles arbutifolia*, *Lonicera hispidula*, *Rubus ursinus*, *Frangula californica*, and *Symporicarpos mollis*. Commonly associated herbs include *Dryopteris arguta* and *Adenocaulon bicolor*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	1.0	0 – 2	27.5	20 – 35

Geology (field or map data): Sandstone (1), Sandstone, shale, and conglomerate (1), Sandstone and other sedimentary (1)

San Mateo County Watersheds: Ano Nuevo (1), Pescadero Creek (1), San Mateo Bayside (1)

Site Impacts

This association has very low non-native plant cover (average 0.3%) relative to native cover. Non-native species that occur with highest frequency and abundance include *Myosotis latifolia*.

Quercus (parvula, wislizeni) – Arbutus menziesii / Toxicodendron diversilobum Association
Quercus wislizeni – Quercus parvula (tree) Woodland Alliance

Classification Comments

Due to hybridization and morphological similarity between the species, plants identified as *Quercus wislizeni* may be *Quercus parvula*, which has been found to be the most widespread genotype in San Mateo County (Dodd and Afzul-Rafii 2004, Hauser et al. 2017).

***Salix gooddingii* – *Salix laevigata* Forest & Woodland Alliance**

Common Name: Goodding's willow – red willow riparian woodland and forest

NVC Alliance Code: A3752. *Salix gooddingii* - *Salix laevigata* Riparian Forest Alliance

Statewide Description

Salix gooddingii and/or *Salix laevigata* is dominant or co-dominant in the tree or shrub canopy with *Acer negundo*, *Aesculus californica*, *Alnus rhombifolia*, *Calocedrus decurrens*, *Fraxinus latifolia*, *Pinus sabiniana*, *Platanus racemosa*, *Populus fremontii*, *Quercus agrifolia*, *Quercus chrysolepis*, *Quercus lobata*, *Salix lucida* var. *lasiandra* or *Washingtonia filifera*. Shrubs include *Baccharis salicifolia*, *Cornus sericea*, *Rosa californica*, *Rubus armeniacus*, *Salix exigua*, *Salix lasiolepis* or *Sambucus nigra*.

Salix gooddingii and *Salix laevigata* were formerly described and treated as separate alliances, but the two types have been merged since they often occur together and/or share similar habitats.

Salix laevigata grows commonly with various willows and other riparian trees, but it also can solely dominate sites. Researchers have mainly recognized mixed associations that include *S. laevigata* or *S. gooddingii* in the *Alnus rhombifolia*, *Populus fremontii*, and *Quercus agrifolia* alliances, too. Various associations of *Salix laevigata*-*Salix lasiolepis* exist, where several studies done in coastal and southern California describe mainly associations characterized by two trees. We need more sampling and study to understand this complex.

Salix gooddingii is a common riparian tree or shrub in the West, and stands of the species occur in the southwestern United States and northern Mexico (NatureServe 2007a). Mixed and pure stands of *S. gooddingii* occur regularly in the Central Valley and southern California. When *S. gooddingii* or *S. laevigata* co-dominates with *Populus fremontii*, the alliance is determined as *Populus fremontii* - *Fraxinus velutina* - *Salix gooddingii* Alliance.

Local Vegetation Description

The Goodding's willow – red willow riparian woodland and forest Alliance forms an open to intermittent tree canopy with an open to continuous shrub understory. *Salix laevigata* are characteristic or often present. Regenerating or shrubby trees that are often present include *Salix laevigata*. Commonly associated shrubs include *Rubus ursinus*, *Ribes sanguineum*, *Sambucus nigra*, and *Toxicodendron diversilobum*, and commonly associated herbs include *Heracleum maximum*, *Marah fabaceus*, *Polystichum munitum*, *Urtica dioica*, *Claytonia perfoliata*, *Conium maculatum*, *Scrophularia californica*, and *Stachys bullata*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	0.0	0 – 0	no data	no data
Hardwood	17.6	11 – 50	12.5	10 – 15
Regenerating or Shrubby Tree	12.1	0 – 27.0	no data	no data
Shrub	47.4	13 – 80	1.5	1 – 2
Herb	41.3	12 – 90	0.3	0 – 0.5

Local Membership Rule

Salix laevigata dominates along streams, rivers, ditches, floodplains, and lake edges. Associated trees and shrubs include *Alnus rhombifolia*, *Populus fremontii*, *Quercus agrifolia*, *Rubus*, *Salix*, and others.

Local Environmental Description

Elevation: Mean 152 m, Range 7 – 262 m

Aspect: SE (4), SW (1)

Slope: Mean 2 degrees, Range 2 – 3 degrees

Macro Topography: Bottom (3), Lower 1/3 of slope (1), Wash (channel bed) (1)

Large Rock: Mean 1.2%, Range 0.0 – 4.0%

Small Rock: Mean 6.4%, Range 0.0 – 20.0%

Fines Cover: Mean 55.0%, Range 55.0 – 55.0%

Litter Cover: Mean 48.0%, Range 15.0 – 75%

Soil Texture (field assessed): Medium to very fine, sandy loam (3), Coarse, loamy sand (1), Fine sand (1)

Geology (field or map data): Sandstone (2), Franciscan melange (2), Granitic (1)

San Mateo County Watersheds: San Mateo Bayside (3), Ano Nuevo (1), Half Moon Bay (1)

Site Impacts

This alliance has low non-native plant cover (average 2.4%) relative to native cover. Non-native species that occur with highest frequency and abundance include *Anthriscus caucalis*, *Brassica nigra*, *Cakile maritima*, *Carduus pycnocephalus*, *Carpobrotus edulis*, *Cirsium arvense*, *Cirsium vulgare*, *Conium maculatum*, *Ehrharta erecta*, *Festuca arundinacea*, *Foeniculum vulgare*, *Geranium dissectum*, *Myosotis latifolia*, *Oxalis pes-caprae*, *Picris echioides*, *Plantago lanceolata*, *Sherardia arvensis*, *Sonchus oleraceus*, and *Stellaria media*.

Salix laevigata / (Cornus sericea – Ribes spp.) / Scirpus microcarpus – Carex spp. Association

Common Name: Red Willow / (American Dogwood – Currant) / Small-fruited Bulrush – Sedge Woodland

Alliance: *Salix gooddingii* – *Salix laevigata* Forest & Woodland Alliance

Local Vegetation Description

The Red Willow / (American Dogwood – Currant) / Small-fruited Bulrush – Sedge Association forms an open to intermittent tree canopy with an open to continuous shrub understory. The dominant tree is *Salix laevigata* which is often regenerating. Commonly associated shrubs include *Cornus sericea*, *Rubus ursinus*, and *Toxicodendron diversilobum*, and commonly associated herbs include *Dryopteris arguta*, *Heracleum maximum*, *Marah fabaceus*, and *Polystichum munitum*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	1.0	0 – 3	10.0	5 – 15
Hardwood	32.8	11 – 57	7.5	5 – 10
Regenerating or Shrubby Tree	7.6	0 – 27	no data	no data
Shrub	40.6	11 – 70	no data	no data
Herb	47.2	12 – 90	0.5	0 – 1

Local Environmental Description

Elevation: Mean 292 m, Range 163 – 463 m

Aspect: SE (3), Variable (1), Flat (1)

Slope: Mean 2 degrees, Range 0 – 3 degrees

Macro Topography: Lower 1/3 of slope (2), Bottom (2), Wash (channel bed) (1)

Large Rock: Mean 1.3%, Range 0.0 – 4.0%

Small Rock: Mean 7.6%, Range 0.0 – 20%

Fines Cover: Mean 23.0%, Range 23 – 23%

Litter Cover: Mean 64.5%, Range 45 – 75%

Soil Texture (field assessed): Medium to very fine, sandy loam (2), Medium silt (1),
Moderately fine silty clay loam (1), Coarse, loamy sand (1)

Geology (field or map data): Franciscan melange (4), Granitic (1)

San Mateo County Watersheds: San Mateo Bayside (2), Half Moon Bay (1)

Other Watersheds, Marin Co.: Lagunitas Creek (2)

Site Impacts

This association has very low non-native plant cover (average 0.9%) relative to native cover. Non-native species that occur with highest frequency and abundance include

Salix laevigata / (Cornus sericea – Ribes spp.) / Scirpus microcarpus – Carex spp. Association
Salix gooddingii – Salix laevigata Woodland Alliance

Brassica nigra and *Conium maculatum*.

Classification Comments

The name of this association has been updated from *Salix laevigata / Cornus sericea / Scirpus microcarpus* Association to broaden its definition. Since the number of surveys of this association in San Mateo County is low, data from nearby counties were included.

***Salix laevigata / Salix lasiolepis* Association**

Common Name: Red Willow / Arroyo Willow Woodland

Alliance: *Salix gooddingii* – *Salix laevigata* Forest & Woodland Alliance

Local Vegetation Description

The Red Willow / Arroyo Willow Association forms an open tree canopy with an open shrub understory. *Alnus rubra*, *Fraxinus latifolia*, *Salix* spp., and *Salix laevigata* are characteristic trees or often present. Regenerating or shrubby trees that are often present include *Alnus rubra* and *Fraxinus latifolia*.

Commonly associated shrubs include *Salix lasiolepis*, *Baccharis salicifolia*, *Lupinus arboreus*, *Rubus armeniacus*, *Rubus spectabilis*, *Rubus ursinus*, and *Sambucus racemosa*, and commonly associated herbs include *Juncus effusus*, *Urtica dioica*, *Athyrium filix-femina*, *Cakile maritima*, *Carex obnupta*, *Carpobrotus edulis*, *Cyperus* spp., *Ehrharta erecta*, *Epilobium ciliatum*, *Equisetum* spp., *Equisetum arvense*, *Festuca arundinacea*, *Foeniculum vulgare*, *Heracleum maximum*, *Holcus lanatus*, *Juncus arcticus*, *Marah fabaceus*, *Oenanthe sarmentosa*, *Oxalis pes-caprae*, *Picris echioides*, *Plantago* spp., *Polygonum punctatum*, *Potentilla anserina*, *Ranunculus californicus*, *Rumex* spp., *Rumex conglomeratus*, *Schoenoplectus americanus*, *Scirpus microcarpus*, *Stachys bullata*, *Stachys chamissonis*, and *Veronica americana*.

***Salix lucida* ssp. *lasiandra* Forest & Woodland Alliance**

Common Name: Shining willow groves

NVC Alliance Code: A3748. *Salix lucida* Scrub Swamp Alliance

Statewide Description

Salix lucida is dominant or co-dominant in the tree or shrub canopy with *Acer macrophyllum*, *Alnus rhombifolia*, *Cornus sericea*, *Platanus racemosa*, *Populus fremontii*, *Populus trichocarpa*, *Quercus agrifolia*, *Salix* spp., and *Sambucus nigra*.

In California, *Salix lucida* stands appear to be limited to relatively moist coastal areas, permanently flooded swampy bottomlands, saturated montane meadows, or along low-gradient streams. Disturbances during winter floods modify stands; the timing of seed dispersal and spring flood patterns determine seedling success. There are two subspecies of *Salix lucida*: *S. lucida* ssp. *lasiandra*, which is usually a tree, and *S. lucida* ssp. *caudata*, a montane shrub. Only *Salix lucida* ssp. *lasiandra* is included in this alliance.

Local Vegetation Description

The Shining willow groves Alliance forms an open to intermittent tree canopy with a sparse to continuous shrub understory. *Salix lasiandra* is the dominant tree or regenerating layer. Commonly associated shrubs include *Rubus ursinus*, *Cornus sericea*, and *Toxicodendron diversilobum*, and commonly associated herbs include *Scrophularia californica*.

Salix lucida ssp. *lasiandra* Woodland Alliance

Local Membership Rule

Salix lucida ssp. *lasiandra* dominates in the overstory, sometimes with higher or similar cover by shrubs in the understory, such as *Rubus* spp. and *Salix lasiolepis*. Sometimes *Alnus rubra* may be co-dominant with *S. lucida*, and adjacent stands may be dominated by *Alnus* spp., *Quercus agrifolia* or conifers.

***Schinus (molle, terebinthifolius) – Myoporum laetum* Woodland Semi-Natural Alliance**

Common Name: Pepper tree or Myoporum groves

NVC Alliance Code: A3329. *Schinus molle* - *Schinus terebinthifolius* - *Myoporum laetum*
Ruderal Woodland Alliance

Statewide Description

Myoporum laetum, *Schinus molle*, or *Schinus terebinthifolius* is dominant in the tree canopy. DiTomaso and Healey (2007) considered these trees as invasive in California. These trees are evergreen with aromatic compound leaves. Birds disperse the colored fruits allowing seedlings to establish in wildland vegetation. The trees are common ornamentals that have escaped from cultivation. *Myoporum laetum* occurs in central and southern California, as an escaped ornamental to 10 m tall. *M. laetum*, the ngaio tree, has Cal-IPC rank of Moderate, and it is a native of New Zealand. It forms dense, single-species stands in coastal areas. It has particularly spread from campground plantings in state parks along the central and southern coast. It can sprout easily after fire when top-killed, and its purple fruits are attractive to birds, which disperse them (Kitz 2000b).

Local Vegetation Description

The Pepper tree or Myoporum Alliance forms an intermittent overstory canopy with an open shrub understory in the single sample available. The dominant tall shrub or small

tree is *Myoporum laetum*, with *Baccharis pilularis* and *Frangula californica* also present. Herbs include *Holcus lanatus*, *Achillea millefolium*, *Bromus hordeaceus*, *Geranium dissectum*, *Picris echioides*, and *Vulpia myuros*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	0.0	NA	no data	no data
Hardwood	0.0	NA	no data	no data
Regenerating or Shrubby Tree	0.0	NA	no data	no data
Shrub	40.0	NA	3.5	2 – 5
Herb	35.0	NA	0.3	0 – 0.5

Local Membership Rule

Myoporum laetum dominant in open to dense stands.

Local Environmental Description

Elevation: 19 m

Aspect: SW (1)

Slope: 1 degree

Macro Topography: Lower 1/3 of slope (1)

Large Rock: 0.0%

Small Rock: 0.2%

Fines Cover: 25.0%

Litter Cover: 72%

Soil Texture (field assessed): Medium to very fine, sandy loam (1)

Geology (field or map data): Sandstone (1)

San Mateo County Watersheds: Ano Nuevo (1)

Site Impacts

This alliance has greater cover of exotics than natives, non-native plant cover averages 91.2% relative to native cover. Non-native species that occur with highest frequency and abundance include *Anagallis arvensis*, *Bromus hordeaceus*, *Carduus pycnocephalus*, *Cirsium vulgare*, *Geranium dissectum*, *Holcus lanatus*, *Myoporum laetum*, *Parentucellia viscosa*, *Picris echioides*, *Raphanus sativus*, *Sonchus asper*, *Vicia sativa*, and *Vulpia myuros*.

Associations in San Mateo County

None determined

Classification Comments

The single survey was classified to the alliance level only.

***Sequoia sempervirens* Forest & Woodland Alliance**

Common Name: Redwood forest and woodland

NVC Alliance Code: A3403. *Sequoia sempervirens* Forest Alliance

Statewide Description

Sequoia sempervirens is dominant or co-dominant in the tree canopy with *Abies grandis*, *Acer macrophyllum*, *Alnus rubra*, *Arbutus menziesii*, *Chrysolepis chrysophylla*, *Notholithocarpus densiflorus*, *Picea sitchensis*, *Pseudotsuga menziesii*, *Tsuga heterophylla*, and *Umbellularia californica*.

Sequoia sempervirens occurs in moist coastal areas with heavy summer fog. Stands generally occur below 600 meters in elevation, from southern Oregon to the Santa Lucia Mountains in central California. Scattered stands also occur along streams, springs, seeps, and sheltered moist locations up to about 975 meters in elevation, where they usually occur as mixed hardwood forests (Sawyer 2006, 2007). *Sequoia sempervirens* is probably limited in its northern extent by freezing temperatures and in its southern extent by low winter rainfall (Lanner 1999).

Ecologists differentiate forests on alluvial streamside terraces, where *S. sempervirens* is usually the dominant canopy tree, from those in upland settings, where *S. sempervirens* shares the canopy with other conifers and with hardwood trees (NatureServe 2007a). However, these differences are best understood when the associations are placed in three geographic regions (Sawyer et al. 2000b). *Tsuga heterophylla* plays an important role in the northern forest region, and it is absent from

Sequoia sempervirens Woodland Alliance

the other two regions, where *Notholithocarpus densiflorus* plays an important role. Additionally, redwood genetics in the southern forest region differs from that in the other regions (Sawyer et al. 2000a, b). Precipitation varies significantly between northern and southern regions with fog-drip playing an increasingly important role in the southern portion of the range (Olsen et al. 1990).

Local Vegetation Description

The Redwood forest and woodland Alliance forms an open to continuous tree canopy with a sparse to continuous shrub understory. The dominant tree is *Sequoia sempervirens*, and *Notholithocarpus densiflorus* and *Arbutus menziesii* are characteristic or often present. Commonly associated shrubs include *Vaccinium ovatum*, and commonly associated herbs include *Polystichum munitum*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	46.5	0 – 95	41.6	15 – 100
Hardwood	31.1	0 – 90	21.7	5 – 50
Regenerating or Shubby Tree	3.5	0 – 40.0	5.0	0.5 – 20
Shrub	10.3	0.0 – 70.0	2.1	0 – 5
Herb	6.9	0 – 40	0.3	0 – 1

Local Membership Rule

Sequoia sempervirens dominates, co-dominates, or characterizes (rarely with as little as 5% cover) stands near streams, along all slopes and aspects, or on ridges. Associated trees include *Acer macrophyllum*, *Notholithocarpus densiflorus*, *Pseudotsuga menziesii*, *Torreya californica*, and *Umbellularia californica*, which are typically sub- to co-dominant but may occasionally exceed *Sequoia* in cover. *Vaccinium ovatum*, *Oxalis oregana*, and *Woodwardia fimbriata* may intermix in the understory.

Local Environmental Description

Elevation: Mean 363 m, Range 77 – 658 m

Aspect: NW (4), SE (4), Variable (4), NE (3), SW (2), Flat (1)

Slope: Mean 22 degrees, Range 0 – 63 degrees

Macro Topography: Middle 1/3 of slope (5), Upper 1/3 of slope (4), Bottom to Lower 1/3 of slope (4), Upper 1/3 of slope to Ridgetop (2), Lower 1/3 of slope (2), Ridge top (1)

Large Rock: Mean 2.9%, Range 0.0 – 25.0%

Small Rock: Mean 1.5%, Range 0.0 – 15.0%

Fines Cover: Mean 7.2%, Range 0.0 – 35.0%

Litter Cover: Mean 84.2%, Range 28.0 – 100%

Soil Texture (field assessed): Medium to very fine, sandy loam (4), Moderately fine clay loam (3), Moderately coarse, sandy loam (2), Moderately fine silty clay loam (2), Medium to very fine, loamy sand (2), Medium sand (1), Medium loam (1), Coarse, loamy sand (1), Sand, (class unknown) (1), Moderately fine sandy clay loam (1)

Geology (field or map data): Shale and other sedimentary (41), Sandstone (3), Mixed

sedimentary (2), Sedimentary (type unknown) (2), Siltstone (1), Franciscan melange (1), Metamorphic (type unknown) (1), Mixed alluvium (1), Mixed metamorphic (1), Sandy alluvium (most alluvial fans and washes) (1)

San Mateo County Watersheds: Palo Alto (25), San Mateo Bayside (15), Pescadero Creek (7), Ano Nuevo (3), San Gregorio Creek (2), Tunitas Creek (2)

Site Impacts

This alliance has very low non-native plant cover (average 0.1%) relative to native cover. Non-native species that occur with highest frequency and abundance include *Epipactis helleborine*.

Sequoia sempervirens – Acer macrophyllum – Umbellularia californica Association

Common Name: Redwood – Bigleaf Maple – California Bay Woodland

Alliance: *Sequoia sempervirens* Forest & Woodland Alliance

Local Vegetation Description

The Redwood – Bigleaf Maple – California Bay Association forms an intermittent to continuous tree canopy with a sparse to open shrub understory. The dominant tree is *Sequoia sempervirens*, and *Acer macrophyllum*, *Umbellularia californica*, and *Notholithocarpus densiflorus* are characteristic or often present. Commonly associated shrubs include *Corylus cornuta*, and commonly associated herbs include *Polystichum munitum*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	60.0	45 – 75	42.5	35 – 50
Hardwood	8.5	7 – 10	15.0	10 – 20
Regenerating or Shubby Tree	2.0	1.2 – 2.8	5.5	2 – 10
Shrub	1.1	0.2 – 2.0	2.1	0.5 – 5
Herb	29.5	11 – 48	0.5	0 – 1

Local Environmental Description

Elevation: Mean 162 m, Range 141 – 183 m

Aspect: NW (1), Variable (1)

Slope: Mean 35 degrees, Range 25 – 45 degrees

Macro Topography: Bottom to Lower 1/3 of slope (1), Lower 1/3 of slope (1)

Large Rock: Mean 1.1%, Range 0.2 – 2.0%

Small Rock: Mean 3.1%, Range 1.2 – 5.0%

Fines Cover: Mean 11.5%, Range 1.0 – 22.0%

Litter Cover: Mean 80.5%, Range 70.0 – 91%

Soil Texture (field assessed): Medium loam (1), Moderately fine clay loam (1)

Geology (field or map data): Mixed alluvium (1), Mixed metamorphic (1)

San Mateo County Watersheds: San Gregorio Creek (1), Tunitas Creek (1)

Site Impacts

This association has very low non-native plant cover (average 0.2%) relative to native cover. Non-native species that occur with highest frequency and abundance include *Hedera helix*.

Sequoia sempervirens – Pseudotsuga menziesii – Umbellularia californica Association

Common Name: Redwood – Douglas-fir – California Bay Woodland

Alliance: *Sequoia sempervirens* Forest & Woodland Alliance

Local Vegetation Description

The Redwood – Douglas-fir – California Bay Association forms a continuous tree canopy with an open shrub understory in the single sample available. The dominant tree is *Sequoia sempervirens*, and *Pseudotsuga menziesii*, *Umbellularia californica*, and *Notholithocarpus densiflorus* are characteristic or often present. Commonly associated shrubs include *Toxicodendron diversilobum* and *Vaccinium ovatum*, and commonly associated herbs include *Dryopteris arguta* and *Polystichum munitum*.

***Umbellularia californica* Forest & Woodland Alliance**

Common Name: California bay forest and woodland

NVC Alliance Code: A3346 or A3750. *Quercus agrifolia* Woodland Alliance or *Platanus racemosa* - *Quercus agrifolia* - *Juglans californica* Riparian Woodland Alliance

Statewide Description

Umbellularia californica is dominant or co-dominant in the tree or tall shrub canopy with *Acer macrophyllum*, *Aesculus californica*, *Alnus rhombifolia*, *Alnus rubra*, *Arbutus menziesii*, *Corylus cornuta*, *Juglans californica*, *Notholithocarpus densiflorus*, *Pinus sabiniana*, *Platanus racemosa*, *Pseudotsuga menziesii*, *Quercus agrifolia*, *Quercus chrysolepis*, *Quercus wislizeni*, and *Sequoia sempervirens*.

In many cases, *Umbellularia californica* is the only tree species in older stands with few shrubs and herbs present (McBride 1974). Stands occur near the coast and inland in both mesic and riparian settings, usually in a patchwork with stands of other evergreen forest or chaparral alliances. Coastal stands have characteristically wind-pruned trees or shrubs, and both coastal and inland stands typically have dense, clonally sprouted plants. The stands may be shrubby, as on ultramafic soils such as in the western Klamath Mountains, or they may be trees within a larger matrix of chaparral, as in central and southern California. Historically productive stands were cleared for agriculture and residential development (Stein 1990b).

Local Vegetation Description

The California bay forest and woodland Alliance forms an open to continuous tree canopy with an open to intermittent shrub understory. The dominant tree is *Umbellularia californica*, and *Quercus agrifolia* are characteristic or often present. Commonly associated shrubs include *Toxicodendron diversilobum*, *Rubus ursinus*, *Frangula californica*, *Heteromeles arbutifolia*, and *Lonicera hispidula*, and commonly associated herbs include *Dryopteris arguta* and *Polystichum munitum*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	2.3	0 – 15	3.5	2 – 5
Hardwood	56.6	15 – 80	17.5	10 – 35
Regenerating or Shrubby Tree	4.3	0 – 23.0	4.0	1 – 10
Shrub	36.3	3.0 – 60.0	2.3	0.5 – 5
Herb	24.7	2 – 50	0.3	0 – 0.5

Local Membership Rule

Umbellularia californica is either dominant or co-dominant with *Quercus agrifolia* in open to dense woodlands. Found in a variety of upland settings, such as coastal bluffs, inland ridges, steep north-facing slopes, rocky outcrops and post-fire landscapes. If *U. californica* is found in a riparian setting, key to *Acer macrophyllum* – *Alnus rubra* Alliance. If *U. californica* is co-dominant with *Arbutus*, *Acer*, or *Pinus sabiniana* on serpentine, or *Pseudotsuga menziesii*, *Quercus chrysolepis*, *Q. lobata*, *Q. kelloggii*, or *Sequoia*, key to one of these other hardwood or conifer alliances instead.

Local Environmental Description

Elevation: Mean 155 m, Range 88 – 267 m

Aspect: Variable (2), NE (2), NW (1), SE (1)

Slope: Mean 27 degrees, Range 1 – 43 degrees

Macro Topography: Lower 1/3 of slope (2), Middle 1/3 of slope (2), Upper 1/3 of slope (1), Lower to Middle 1/3 of slope (1)

Large Rock: Mean 0.2%, Range 0.0 – 1.2%

Small Rock: Mean 4.9%, Range 0.0 – 20.0%

Fines Cover: Mean 29.8%, Range 8.0 – 53.0%

Litter Cover: Mean 63.4%, Range 40.0 – 88%

Soil Texture (field assessed): Coarse, loamy sand (3), Unknown (1), Medium loam (1), Moderately coarse, sandy loam (1)

Geology (field or map data): Franciscan melange (6), Sandstone and other sedimentary (4), Volcanic and metavolcanic rocks (1), Greenstone (1), Sandstone (1), Sandstone, shale, and conglomerate (1), Ultramafic rocks, mostly serpentine (1), Granitic (generic) (1)

San Mateo County Watersheds: San Mateo Bayside (10), Half Moon Bay (3), Palo Alto (2), Pescadero Creek (1)

Site Impacts

This alliance has low non-native plant cover (average 4.3%) relative to native cover. Non-native species that occur with highest frequency and abundance include *Carduus pycnocephalus* and *Epipactis helleborine*.

***Umbellularia californica* Association**

Common Name: California Bay Woodland

Alliance: *Umbellularia californica* Forest & Woodland Alliance

Local Vegetation Description

The California Bay Association forms a continuous tree canopy with an open shrub understory. The dominant tree is *Umbellularia californica*. Commonly associated shrubs include *Toxicodendron diversilobum* and *Lonicera hispidula*, and commonly associated herbs include *Pentagramma triangularis* and *Polystichum munitum*.

Local Environmental Description

Elevation: Mean 135 m, Range 109 – 161 m

Aspect: NE (1), SE (1)

Slope: Mean 3 degrees, Range 1 – 5 degrees

Macro Topography: Lower 1/3 of slope (1), Lower to Middle 1/3 of slope (1)

Large Rock: 0.0%

Small Rock: Mean 0.5%, Range 0.0 – 1.0%

Fines Cover: Mean 12.5%, Range 10.0 – 15.0%

Litter Cover: Mean 82.5%, Range 78.0 – 87%

Soil Texture (field assessed): Moderately fine clay loam (1)

Geology (field or map data): Franciscan melange (1), Metamorphic (type unknown) (1)

San Mateo County Watersheds: San Mateo Bayside (1)

Site Impacts

This association has very low non-native plant cover (average 0.0%) relative to native cover. No non-native species were recorded by the surveyors.

Classification Comments

Since the number of surveys of this association in San Mateo County is low, data from nearby counties were included.

SHRUB-OVERSTORY VEGETATION

Acacia spp. – Grevillea spp. – Leptospermum laevigatum
Shrubland Provisional Semi-Natural Alliance

Common Name: Australian wattle - Grevillea - Tea tree ruderal patches

NVC Alliance Code: N/A.

Statewide Description

Acacia species belong to the family Fabaceae and are known for their yellow flowers and dissected leaves. Various shrubs are non-natives from Australia that thrive in coastal ranges and transverse ranges of California. The flowers of *Acacia* spp. can be pollinated by beetles, bees and wasps. Its seeds, spread by ants, birds, wind, water, or waste, can be long-lived, germinating after fires or other disturbances.

Leptospermum laevigatum belongs to the family Myrtaceae and is native to southeastern Australia. This small tree has white flowers and narrow leaves and grows in sand dunes in the San Francisco Bay and central and south coast ranges of California. Its seeds are spread via wind, vehicles, soil movement, water and dumped garden waste (CAL-IPC 2017).

Grevillea species are evergreen trees and shrubs distributed in central and southern coastal California (Calflora 2017). They are native to Australia and naturalized in

California along with tropical and subtropical regions of the world (CAL-IPC 2017). They are prolific seeders with light weight seeds dispersed by wind. They can also spread via root suckers.

Stands of *Acacia* spp., *Albizia lophantha*, *Leptospermum laevigatum*, *Grevillea* spp. or related shrubs to small trees occur sporadically in California, particularly along the coast and in the Coast Ranges. They are often near development or from horticultural plantings, where these plants have escaped and are sometimes naturally reproducing in the wild along coastal hills.

Local Vegetation Description

The Australian wattle - *Grevillea* - Tea tree ruderal patches Alliance forms a continuous shrub layer. The emergent tree layer is typically sparse, and the herbaceous layer is sparse. Shrubs that often dominate include *Acacia* spp., *Albizia lophantha*, and *Leptospermum laevigatum*. Commonly associated emergent trees at sparse cover include *Hesperocyparis macrocarpa*, *Notholithocarpus densiflorus*, and *Pinus radiata*. *Marah fabaceus* is an herb often present. Herbs that are sometimes present include *Achillea millefolium*, *Anagallis arvensis*, *Cardamine oligosperma*, *Carduus pycnocephalus*, *Carpobrotus edulis*, *Claytonia perfoliata*, *Conium maculatum*, *Daucus pusillus*, *Dipsacus* spp., *Fragaria chiloensis*, *Galium aparine*, *Hirschfeldia incana*, *Melilotus* spp., *Myosotis latifolia*, *Pseudognaphalium* spp., *Pteridium aquilinum*, *Sanicula crassicaulis*, *Sonchus asper*, *Stellaria media*, and *Torilis arvensis*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	0.7	0 – 2	27.5	20 – 35
Hardwood	0.0	0 – 0.2	12.5	10 – 15
Regenerating or Shubby Tree	0.1	0.0 – 0.2	2.1	0.5 – 5
Shrub	82.7	80 – 88	2.6	0.5 – 5
Herb	0.5	0.2 – 1	0.3	0 – 0.5

Local Membership Rule

A non-native *Acacia* spp., *Albizia lophantha*, *Grevillea* spp., and/or *Leptospermum laevigatum* dominates or co-dominate together in the shrub or low tree canopy. If *Acacia melanoxylon* is dominant, key to the *Eucalyptus* spp. – *Ailanthus altissima* – *Robinia pseudoacacia* Woodland Semi-Natural Alliance.

Site Impacts

This alliance has greater cover of exotics than natives, non-native plant cover averages 97.5% relative to native cover. Non-native species that occur with highest frequency and abundance include *Albizia lophantha*, *Anagallis arvensis*, *Carduus pycnocephalus*, *Carpobrotus edulis*, *Conium maculatum*, *Hirschfeldia incana*, *Ilex aquifolium*, *Leptospermum laevigatum*, *Myosotis latifolia*, *Sonchus asper*, *Stellaria media*, and *Torilis arvensis*.

Associations in San Mateo County

- *Acacia (cyclops, dealbata)*

Classification Comments

This alliance is new and was first used in Marin County (Buck-Diaz et al. 2021).

Acacia (cyclops, dealbata) Provisional Semi-natural Association

Acacia spp. – *Grevillea* spp. – *Leptospermum laevigatum* Shrubland Provisional Semi-Natural Alliance

***Adenostoma fasciculatum* Shrubland Alliance**

Common Name: Chamise chaparral

NVC Alliance Code: A3868. *Adenostoma fasciculatum* Chaparral Alliance

Statewide Description

Adenostoma fasciculatum is dominant in the shrub canopy with *Adenostoma sparsifolium*, *Arctostaphylos glandulosa*, *Arctostaphylos manzanita*, *Arctostaphylos viscida*, *Ceanothus* spp., *Diplacus aurantiacus*, *Eriodictyon californicum*, *Eriogonum fasciculatum*, *Hesperoyucca whipplei*, *Heteromeles arbutifolia*, *Quercus berberidifolia*, *Quercus wislizeni*, *Salvia apiana*, *Salvia leucophylla*, *Salvia mellifera*, and *Toxicodendron diversilobum*. Emergent trees may be present at low cover.

This alliance occurs across cismontane California in a variety of topographic settings from coastal bluffs to steep, lower montane slopes. In stands older than 60 years of age, little new growth is produced as dead stem biomass increases. In earlier treatments, several chaparral series were assigned to mixed alliances other than *Adenostoma fasciculatum* when other shrubs were co-dominant (Sawyer and Keeler-Wolf 1995). Following extensive review and the analysis of many more plots, most mixed stands where another indicator species is either strongly dominant or co-dominant with *A. fasciculatum* were treated as part of other alliances, such as the *Quercus durata* Alliance, with the exception of the *Adenostoma fasciculatum* – *Salvia* spp. Alliance.

Local Vegetation Description

Adenostoma fasciculatum Shrubland Alliance

The Chamise chaparral Alliance forms an intermittent to continuous shrub layer. The emergent tree layer is typically sparse to open, and the herbaceous layer is sparse to open. Dominant and characteristic shrubs include *Adenostoma fasciculatum* and *Heteromeles arbutifolia*, and those that are often present include *Arctostaphylos crustacea*. Commonly associated emergent trees at sparse cover include *Pseudotsuga menziesii*. Herbs that are often present include *Clinopodium douglasii*, and herbs that are sometimes present include *Chlorogalum pomeridianum*, *Galium californicum*, and *Pentagramma triangularis*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	0.4	0 – 2	no data	no data
Hardwood	0.0	0 – 0	no data	no data
Regenerating or Shubby Tree	0.0	0.0 – 0.0	3.5	2 – 5
Shrub	81.8	37.5 – 98.0	3.5	2 – 5
Herb	3.1	0 – 13	0.3	0 – 0.5

Local Membership Rule

Adenostoma fasciculatum dominates, often with sub-dominant shrubs such as *Arctostaphylos manzanita*, *A. glandulosa*, or *Diplacus aurantiacus*. If *A. fasciculatum* co-dominates with *Arctostaphylos* spp., *Ceanothus cuneatus*, *Cercocarpus montanus*, *Quercus berberidifolia*, or *Q. durata*, key to one of the latter alliances instead of *A. fasciculatum*. If co-dominant with *Salvia mellifera*, key to *Adenostoma fasciculatum – Salvia* spp. Alliance.

Local Environmental Description

Elevation: Mean 241 m, Range 179 – 271 m

Aspect: SE (1)

Slope: 5 degrees

Macro Topography: Ridge top (1)

Large Rock: 0.0%

Small Rock: Mean 12.5%, Range 0.0 – 25%

Fines Cover: Mean 35.0%, Range 35 – 35%

Litter Cover: Mean 27.6%, Range 0.2 – 55%

Soil Texture (field assessed): Moderately fine sandy clay loam (1)

Geology (field or map data): Volcanic and metavolcanic rocks (7), Sandstone (1)

San Mateo County Watersheds: San Mateo Bayside (8)

Site Impacts

This alliance has very low non-native plant cover (average 0.1%) relative to native cover. Non-native species that occur with highest frequency and abundance include *Aira caryophyllea* and *Logfia gallica*.

Arctostaphylos (crustacea, tomentosa) Shrubland Alliance

Common Name: Brittle leaf – woolly leaf manzanita chaparral

NVC Alliance Code: A3858. *Arctostaphylos tomentosa* ssp. *crustacea* - *Arctostaphylos tomentosa* Central Coast & Island Chaparral Alliance

Statewide Description

Arctostaphylos crustacea, *Arctostaphylos regismontana* or *Arctostaphylos tomentosa* is dominant, co-dominant, or characteristically present in the shrub canopy with *Adenostoma fasciculatum*, *Arctostaphylos* spp., *Artemisia californica*, *Baccharis pilularis*, *Ceanothus* spp., *Cercocarpus montanus*, *Chrysolepis chrysophylla* var. *minor*, *Ericameria ericoides*, *Eriogonum fasciculatum*, *Frangula californica*, *Heteromeles arbutifolia*, *Salvia mellifera* and *Toxicodendron diversilobum*. Emergent trees may be present at low cover, including *Pinus coulteri* or *Quercus agrifolia*.

The alliance includes stands where *A. crustacea* ssp. *crustacea*, ssp. *crinita*, and ssp. *rosei* are dominant or codominant in the shrub canopy; ssp. *eastwoodiana* grows in the *Arctostaphylos (purissima, rudis)* special stands at Burton Mesa in Santa Barbara Co. Some stands in the East Bay Hills are fragmented and degraded, with only remnant scattered individuals of *A. crustacea* and a significantly higher cover of *Adenostoma fasciculatum*. We still consider such stands as members of the *A. crustacea* alliance. Additionally, other stands include *A. tomentosa* ssp. *tomentosa* as the dominant or co-dominant in the shrub canopy. Since *A. crustacea* and *A. tomentosa* overlap ecologically (for example, at Fort Ord Military Reservation), we have some evidence for

merging of these two taxa into this one alliance. However, we need more data and analysis to understand relationships between this and other maritime chaparral types.

Local Vegetation Description

The Brittle leaf – woolly leaf manzanita chaparral Alliance forms an intermittent to continuous shrub layer. The emergent tree layer is typically sparse to open, and the herbaceous layer is sparse to open.

Dominant and characteristic shrubs include *Arctostaphylos crustacea*, and those that are often present include *Adenostoma fasciculatum* and *Toxicodendron diversilobum*. Commonly associated emergent trees at sparse cover include *Arbutus menziesii*, *Pseudotsuga menziesii*, and *Quercus agrifolia*.

Commonly associated non-vascular plants include Lichen and Moss.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	0.3	0 – 2	17.5	5 – 35
Hardwood	2.8	0 – 20	4.6	0.5 – 10
Regenerating or Shrubby Tree	2.1	0.0 – 16.0	1.1	0 – 2
Shrub	79.0	46.0 – 95.0	2.8	0.5 – 5
Herb	1.7	0 – 8	0.3	0 – 0.5

Local Membership Rule

Arctostaphylos crustacea dominates or co-dominates with *Adenostoma fasciculatum*, *Arctostaphylos regismontana*, *Ceanothus cuneatus*, *C. papillosum*, *Frangula californica*, *Heteromeles arbutifolia*, *Quercus parvula*, or *Q. wislizeni* var. *frutescens*. Trees are often present but at significantly less cover.

Local Environmental Description

Elevation: Mean 380 m, Range 132 – 730 m

Aspect: SE (4), SW (3), NE (2), Variable (1), NW (1)

Slope: Mean 18 degrees, Range 2 – 35 degrees

Macro Topography: Upper 1/3 of slope (5), Middle 1/3 of slope (2), Middle to Upper 1/3 of slope (1), Upper 1/3 of slope to Ridgetop (1), Ridge top (1)

Large Rock: Mean 3.0%, Range 0.0 – 16.0%

Small Rock: Mean 2.6%, Range 0.0 – 10.0%

Fines Cover: Mean 15.7%, Range 0.0 – 35.0%

Litter Cover: Mean 67.6%, Range 18.8 – 96%

Soil Texture (field assessed): Moderately coarse, sandy loam (5), Moderately fine silty clay loam (1), Medium to very fine, sandy loam (1), Medium to very fine, loamy sand (1), Coarse, loamy sand (1), Coarse sand (1)

Geology (field or map data): Sandstone (7), Shale and other sedimentary (2), Sedimentary (type unknown) (2), Franciscan melange (2), Sandstone and other sedimentary (1), Volcanic and metavolcanic rocks (1)

San Mateo County Watersheds: San Mateo Bayside (7), Pescadero Creek (4), Palo Alto (3), San Gregorio Creek (1)

Site Impacts

This alliance has very low non-native plant cover (average 0.1%) relative to native cover. Non-native species that occur with highest frequency and abundance include *Anagallis arvensis*, *Gastridium phleoides*, *Hypochaeris glabra*, and *Soliva sessilis*.

Associations in San Mateo County

- *Arctostaphylos crustacea*
- *Arctostaphylos crustacea* – *Adenostoma fasciculatum* – *Ceanothus (cuneatus, papillosum)*

Classification Comments

Both *A. crustacea* ssp. *crinita* and ssp. *crustacea* are included as dominant plants in these samples.

***Arctostaphylos (nummularia, sensitiva) – Chrysolepis chrysophylla* Shrubland Alliance**

Common Name: Glossy leaf manzanita - Golden chinquapin chaparral

NVC Alliance Code: A3859. *Arctostaphylos nummularia* - *Arctostaphylos stanfordiana* - *Chrysolepis chrysophylla* var. *minor* North Coast Chaparral Alliance

Statewide Description

Arctostaphylos nummularia or *Arctostaphylos sensitiva* dominate or co-dominate in the shrub canopy with *Arctostaphylos columbiana*, *Arctostaphylos glandulosa* ssp. *glandulosa*, *Arctostaphylos virgata*, *Chrysolepis chrysophylla* var. *minor*, *Pickeringia montana*, *Pteridium aquilinum*, and *Vaccinium ovatum*. Emergent trees may be present at low cover, including *Pinus muricata*, *Pseudotsuga menziesii*, or *Sequoia sempervirens*.

Taxonomic treatments of the *Arctostaphylos nummularia* complex vary (Hickman 1993, McMinn 1939, Parker et al. 2007, 2012). Parker et al. recognize *Arctostaphylos sensitiva*, *A. nummularia* ssp. *nummularia*, and *A. nummularia* ssp. *mendocinoensis* based on bark and habit differences.

Arctostaphylos sensitiva grows in Marin and Santa Cruz Counties and it is included in this alliance. *Arctostaphylos nummularia* occurs from Sonoma to Mendocino County. The more erect plants of this species, from 0.5 to 3 m tall with lower stems gray and shredding (ssp. *nummularia*), are also included in this alliance. The more prostrate

plants, <0.5 meters tall with lower stems gray or reddish and shredding (ssp. *mendocinoensis*), are more often associated with stands of the *Hesperocyparis pigmaea* and *Pinus muricata* Alliances in Mendocino County.

Stands of this alliance are part of the maritime chaparral -- see the maritime chaparral discussion in Sawyer et al. (2009). This alliance occurs on coastal slopes with nutrient poor soils and relatively high amounts of the spring-summer fog, with its distribution in the northern Central Coast to North Coast from Santa Cruz to Mendocino Co., while the *Arctostaphylos (crustacea, tomentosa)* alliance has a broader distribution in the Central Coast region from San Mateo to Santa Barbara Co. on out to the Channel Islands.

Local Vegetation Description

The Glossy leaf manzanita - Golden chinquapin chaparral Alliance forms an open to continuous shrub layer. The emergent tree layer is typically sparse to continuous, and the herbaceous layer is sparse to open. Dominant and characteristic shrubs include *Vaccinium ovatum*, and those that are often present include *Arctostaphylos montaraensis*. Commonly associated emergent trees at sparse cover include *Chrysolepis chrysophylla* var. *minor* and *Pinus attenuata*. Herbs that are often present include *Pteridium aquilinum*, and herbs that are sometimes present include *Clinopodium douglasii* and *Polystichum munitum*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	1.4	0 – 8	9.2	5 – 15
Hardwood	5.0	0 – 50	5.2	2 – 10
Regenerating or Shubby Tree	9.2	0.0 – 80.0	1.5	0 – 5
Shrub	69.1	28.0 – 90.0	2.7	0 – 5
Herb	3.3	0 – 15	0.4	0 – 2

Local Membership Rule

Some stands have *Chrysolepis chrysophylla* strongly dominant in dense, clonal stands occurring on upper slopes and ridges, often transitional between forest and chaparral, while other stands have *Arctostaphylos sensitiva*, *A. virgata*, *Chrysolepis chrysophylla* var. *minor* and/or *Vaccinium ovatum* dominant or co-dominant in maritime chaparral stands. *Arctostaphylos manzanita* and/or *Chrysolepis chrysophylla* stands particularly occur along Mt. Tamalpais – Bolinas Ridge. *Pinus muricata*, *Sequoia sempervirens*, and *Pteridium aquilinum* are often present. Stands are often transitional between forest and chaparral.

Local Environmental Description

Fines Cover: Mean 17.7%, Range 0.0 – 50.0%

Litter Cover: Mean 50.5%, Range 0.0 – 100%

Soil Texture (field assessed): Moderately fine sandy clay loam (6), Coarse, loamy sand (2), Medium sand (2), Medium silt (1), Medium to very fine, sandy loam (1), Moderately coarse, sandy loam (1), Not recorded (1)

Geology (field or map data): Granitic (6), Granitic (generic) (4), Mixed metamorphic (2), Sandstone, shale, and conglomerate (2), Sedimentary (type unknown) (2), Siltstone (2), Mixed sedimentary (1), Sandstone (1), Shale and other sedimentary (1)

San Mateo County Watersheds: Pacifica (8), Half Moon Bay (5), San Mateo Bayside (3), Ano Nuevo (2), Davenport (2), Pescadero Creek (1)

Site Impacts

This alliance has very low non-native plant cover (average 0.3%) relative to native cover. Non-native species that occur with highest frequency and abundance include *Aira caryophyllea*, *Cortaderia jubata*, and *Rumex acetosella*.

Associations in San Mateo County

- *Arctostaphylos montaraensis* –
Arctostaphylos imbricata *Arctostaphylos sensitiva*
- *Chrysolepis chrysophylla* / *Vaccinium ovatum*

Classification Comments

This alliance is a merge of two previously accepted alliances, *Arctostaphylos (nummularia, sensitiva)* and *Chrysolepis chrysophylla*.

***Arctostaphylos montaraensis* – *Arctostaphylos imbricata* Provisional Association**

Common Name: Montara Manzanita – San Bruno Mountain Manzanita Shrubland

Alliance: *Arctostaphylos (nummularia, sensitiva)* – *Chrysolepis chrysophylla* Shrubland Alliance

Local Vegetation Description

The Montara Manzanita – San Bruno Mountain Manzanita Association forms an intermittent to continuous shrub layer. The emergent tree layer is typically sparse to open, and the herbaceous layer is sparse to open. Dominant and characteristic shrubs include *Arctostaphylos montaraensis* or *Arctostaphylos imbricata* with *Vaccinium ovatum*, and those that are often present include *Baccharis pilularis*, *Ceanothus thyrsiflorus*, *Frangula californica*, *Rubus ursinus*, and *Toxicodendron diversilobum*. Commonly associated emergent trees at sparse cover include *Quercus agrifolia*. Herbs that are often present include *Polystichum munitum* and *Pteridium aquilinum*, and herbs that are sometimes present include *Clinopodium douglasii* and *Scrophularia californica*.

***Artemisia californica* – (*Salvia leucophylla*) Shrubland Alliance**

Common Name: California sagebrush – (purple sage) scrub

NVC Alliance Code: A3883. *Artemisia californica* - *Salvia leucophylla* Mesic Scrub Alliance

Statewide Description

Artemisia californica is dominant or co-dominant in the shrub canopy with *Adenostoma fasciculatum*, *Baccharis pilularis*, *Cleome isomeris*, *Diplacus aurantiacus*, *Encelia californica*, *Eriogonum fasciculatum*, *Hesperoyucca whipplei*, *Isocoma menziesii*, *Keckiella cordifolia*, *Lotus scoparius*, *Opuntia littoralis*, *Rhus integrifolia*, *Salvia apiana*, *Salvia leucophylla*, *Salvia mellifera*, *Sambucus nigra* and *Toxicodendron diversilobum*. Emergent trees or tall shrubs may be present at low cover.

Stands of this alliance occur in modal settings of coastal scrub throughout the central and southern California Coast Ranges. It is found particularly on steep slopes and in high abundance on protected, north-facing hillsides. Closer to the coast in the northern portion of its range, *A. californica* commonly mixes with *Baccharis pilularis* and transitions into the *Baccharis pilularis* alliance when that species becomes co-dominant. Farther inland and in drier portions of the southern coastal area, *A. californica* mixes with *Eriogonum fasciculatum* and transitions to the *Eriogonum fasciculatum* alliance where both species can co-dominate (Rundel 2007).

Local Vegetation Description

Artemisia californica – (*Salvia leucophylla*) Shrubland Alliance

The California sagebrush – (purple sage) scrub Alliance forms an open to continuous shrub layer. The emergent tree layer is typically sparse to open, and the herbaceous layer is sparse to open. Dominant and characteristic shrubs include *Artemisia californica*, *Baccharis pilularis*, and *Diplacus aurantiacus*, and those that are often present include *Toxicodendron diversilobum*. The herbs that are often present include *Chlorogalum pomeridianum*, and herbs that are sometimes present include *Achillea millefolium*, *Anagallis arvensis*, *Avena* spp., *Bromus hordeaceus*, *Dudleya farinosa*, *Eriogonum latifolium*, *Eriophyllum stoechadifolium*, *Fragaria vesca*, *Galium aparine*, *Hirschfeldia incana*, *Lobularia maritima*, *Marah fabaceus*, *Nassella pulchra*, *Pseudognaphalium californicum*, *Pseudognaphalium ramosissimum*, *Scrophularia californica*, and *Sonchus asper*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	0.1	0 – 1	3.5	2 – 5
Hardwood	0.2	0 – 2	12.5	10 – 15
Regenerating or Shrubby Tree	0.0	0.0 – 0.2	1.5	1 – 2
Shrub	64.6	25.0 – 90.0	0.9	0 – 2
Herb	11.6	0 – 30	0.3	0 – 0.5

Local Membership Rule

Artemisia californica dominates and may intermix with *Baccharis pilularis*, *Diplacus aurantiacus*, and/or *Toxicodendron diversilobum*. If *Baccharis pilularis* is present, *Artemisia californica* is greater in cover for this alliance.

Local Environmental Description

Elevation: Mean 149 m, Range 41 – 337 m

Aspect: SW (6), NE (1), SE (1), NW (1), S (1)

Slope: Mean 24 degrees, Range 10 – 50 degrees

Macro Topography: Upper 1/3 of slope (4), Middle 1/3 of slope (3), Lower 1/3 of slope (1), Lower to Middle 1/3 of slope (1), Ridge top (1)

Large Rock: Mean 1.5%, Range 0.0 – 10.0%

Small Rock: Mean 19.7%, Range 1.0 – 75.0%

Fines Cover: Mean 31.8%, Range 5.3 – 60.0%

Litter Cover: Mean 35.5%, Range 0.0 – 80%

Soil Texture (field assessed): Moderately coarse, sandy loam (2), Not recorded (2), Coarse, loamy sand (1), Fine clay (1), Loam, (class unknown) (1), Medium to very fine, sandy loam (1), Moderately fine sandy clay loam (1), Sand, (class unknown) (1)

***Artemisia californica* Association**

Common Name: California Sagebrush Shrubland

Alliance: *Artemisia californica* – (*Salvia leucophylla*) Shrubland Alliance

Local Vegetation Description

The California Sagebrush Association forms an open to continuous shrub layer. The emergent tree layer is typically sparse, and the herbaceous layer is sparse to open. Dominant and characteristic shrubs include *Artemisia californica*, *Baccharis pilularis*, and *Toxicodendron diversilobum*, and those that are often present include *Diplacus aurantiacus*. Commonly associated emergent trees at sparse cover include *Quercus agrifolia*. Herbs that are often present include *Eriophyllum stoechadifolium* and *Marah fabaceus*, and herbs that are sometimes present include *Anagallis arvensis*, *Avena* spp., *Bromus hordeaceus*, *Chlorogalum pomeridianum*, *Dudleya farinosa*, *Eriogonum latifolium*, *Galium aparine*, *Geranium dissectum*, *Vulpia myuros*, and *Zigadenus fremontii*.

***Baccharis pilularis* Shrubland Alliance**

Common Name: Coyote brush scrub

NVC Alliance Code: A0836. *Baccharis pilularis* Scrub Alliance

Statewide Description

Baccharis pilularis is dominant or co-dominant in the shrub canopy with *Artemisia californica*, *Ceanothus thyrsiflorus*, *Corylus cornuta*, *Diplacus aurantiacus*, *Eriogonum fasciculatum*, *Eriophyllum staechadifolium*, *Frangula californica*, *Garrya elliptica*, *Gaultheria shallon*, *Holodiscus discolor*, *Lotus scoparius*, *Lupinus arboreus*, *Morella californica*, *Rubus ursinus*, *Salvia apiana*, *Salvia leucophylla*, and *Toxicodendron diversilobum*. Emergent trees may be present at low cover, including *Pinus muricata*, *Pseudotsuga menziesii*, *Quercus agrifolia*, or *Umbellularia californica*.

Stands can be transitory to forest and woodland types or persistent for a long time (Heady et al. 1977). Seedlings of *Baccharis pilularis* invade grasslands in the central coast, forming stands when grazing and fire decrease (McBride and Heady 1968). Older, shady stands are transitional to forest types with *Pinus muricata*, *Pseudotsuga menziesii*, *Quercus agrifolia*, and *Umbellularia californica* (Grams et al. 1977, McBride 1974). *Baccharis pilularis* invades recently logged land in northern California well away from the coast. *B. pilularis* also invades coastal dunes stabilized by *Ammophila arenaria* or *Lupinus arboreus* (Pickart and Sawyer 1998).

Baccharis pilularis stands in the Sierra Nevada foothills, along the central coast, and in southern California tend to be largely seral to other scrub and woodland types.

However, the natural seral relationships between *Baccharis pilularis* and adjacent herbaceous and woody alliances are complex and varied. The core of diverse, older stands of *Baccharis pilularis* lies along the coast from Monterey County to Sonoma County. For example, Borchert et al. (2004) identify a *Baccharis pilularis* Alliance in the northern Santa Lucia Range, where they sampled mid- to late-seral stands (with >25 years since fire).

Local Vegetation Description

The Coyote brush scrub Alliance forms an open to continuous shrub layer. The emergent tree layer is typically sparse to open, and the herbaceous layer is sparse to continuous. Dominant and characteristic shrubs include *Baccharis pilularis*, *Rubus ursinus*, and *Toxicodendron diversilobum*, and those that are often present include *Frangula californica*. Herbs that are sometimes present include *Achillea millefolium*, *Aira caryophyllea*, *Anagallis arvensis*, *Avena* spp., *Brachypodium distachyon*, *Briza minor*, *Bromus diandrus*, *Bromus hordeaceus*, *Chlorogalum pomeridianum*, *Cirsium vulgare*, *Clinopodium douglasii*, *Conium maculatum*, *Danthonia californica*, *Eriophyllum stoechadifolium*, *Geranium dissectum*, *Heracleum maximum*, *Hypochaeris radicata*, *Marah fabaceus*, *Plantago lanceolata*, *Polystichum munitum*, *Pteridium aquilinum*, *Rumex acetosella*, *Sanicula crassicaulis*, *Scrophularia californica*, *Sisyrinchium bellum*, *Symphytum chilense*, and *Vulpia bromoides*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	0.3	0 – 12	12.0	2 – 35
Hardwood	0.4	0 – 15	6.6	2 – 15
Regenerating or Shrubby Tree	0.0	0.0 – 3.0	3.0	1 – 5
Shrub	70.7	15.0 – 100.0	1.8	0 – 5
Herb	25.6	0 – 85	0.5	0 – 5

Local Membership Rule

In most stands, *Baccharis pilularis* dominates or co-dominates with *Frangula californica*, *Toxicodendron diversilobum*, and/or *Rubus* spp. in the shrub overstory. In some stands, *Frangula californica* or *Garrya elliptica* dominates, and is still keyed to this alliance. If *Calamagrostis nutkaensis* or *Carex obnupta* is co-dominant with *B. pilularis*, key to the *C. nutkaensis* Alliance. If stands have greater cover of *Artemisia californica*, *Ceanothus thyrsiflorus* or *Toxicodendron diversilobum* than *Baccharis pilularis*, key to those respective alliances. A variety of native and non-native forbs and grasses may intermix in the herbaceous layer, sometimes with higher cover than *Baccharis* – including *Avena*, *Bromus*, *Danthonia*, *Deschampsia*, *Elymus glaucus*, *Festuca*, *Hypochaeris*, *Nassella pulchra*, and others.

Local Environmental Description

***Baccharis pilularis* Association**

Common Name: Coyotebrush Shrubland Shrubland

Alliance: *Baccharis pilularis* Shrubland Alliance

Local Vegetation Description

The Coyotebrush Shrubland Association forms an intermittent to continuous shrub layer. The emergent tree layer is typically sparse, and the herbaceous layer is sparse to intermittent. Dominant and characteristic shrubs include *Baccharis pilularis*, and those that are often present include *Rubus ursinus* and *Toxicodendron diversilobum*. Herbs that are sometimes present include *Aira caryophyllea*, *Anagallis arvensis*, *Avena* spp., *Briza maxima*, *Bromus hordeaceus*, *Chlorogalum pomeridianum*, *Clinopodium douglasii*, *Elymus glaucus*, *Holcus lanatus*, *Juncus patens*, *Plantago lanceolata*, *Pteridium aquilinum*, and *Stachys ajugoides*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	0.0	0 – 0	no data	no data
Hardwood	0.0	0 – 0	no data	no data

Shrub	80.0	65.0 – 95.0	1.3	0.5 – 2
Herb	17.5	0 – 35	0.3	0 – 0.5

Local Environmental Description

Elevation: Mean 172 m, Range 55 – 289 m

Aspect: SW (1)

Slope: 14 degrees

Macro Topography: Upper 1/3 of slope (1)

Large Rock: 0/0%

Small Rock: 0.0%

Fines Cover: no data

Litter Cover: 0%

Soil Texture (field assessed): Medium to very fine, sandy loam (1)

Geology (field or map data): Sandstone and other sedimentary (2)

San Mateo County Watersheds: Half Moon Bay (1), Pacifica (1)

Site Impacts

This association has low non-native plant cover (average 9.3%) relative to native cover. Non-native species that occur with highest frequency and abundance include *Aira caryophyllea*, *Anagallis arvensis*, *Avena* spp., *Briza maxima*, *Bromus hordeaceus*, *Holcus lanatus*, and *Plantago lanceolata*.

Classification Comments

***Baccharis pilularis* – (*Frangula californica*) – *Rubus* spp. Association**

Common Name: Coyote brush – coffeeberry – berry bramble Shrubland

Alliance: *Baccharis pilularis* Shrubland Alliance

Local Vegetation Description

The Coyote brush – coffeeberry – berry bramble Association forms an open to continuous shrub layer. The emergent tree layer is typically sparse to open, and the herbaceous layer is open to intermittent. Dominant and characteristic shrubs include *Baccharis pilularis*, *Rubus ursinus*, and *Toxicodendron diversilobum*, and those that are often present include *Frangula californica*. Commonly associated emergent trees at sparse cover include *Pseudotsuga menziesii*. Herbs that are often present include *Scrophularia californica*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	0.7	0 – 8	25.0	15 – 35
Hardwood	0.2	0 – 2	8.0	2 – 15
Regenerating or Shrubby Tree	0.0	0 – 0.4	3.5	2 – 5
Shrub	72.1	11 – 100	2.5	0.5 – 5
Herb	19.2	4 – 50	0.4	0 – 2

Local Environmental Description

Elevation: Mean 264 m, Range 28 – 549 m

Aspect: NE (6), SW (3), SE (2), Flat (1), NW (1)

Slope: Mean 16 degrees, Range 0 – 32 degrees

Macro Topography: Upper 1/3 of slope (3), Ridge top (2), Other (1), Upper 1/3 of slope to Ridgetop (1), Bench (1), Middle to Upper 1/3 of slope (1), Middle 1/3 of slope (1), Lower 1/3 of slope (1), Lower to Middle 1/3 of slope (1)

Large Rock: Mean 0.1%, Range 0.0 – 2.0%

Small Rock: Mean 1.3%, Range 0.0 – 30.0%

Fines Cover: Mean 45.7%, Range 1.0 – 68.8%

Litter Cover: Mean 50.5%, Range 5.0 – 96%

Soil Texture (field assessed): Medium to very fine, sandy loam (2), Moderately fine clay loam (2), Moderately fine sandy clay loam (2), Not recorded (2), Coarse, loamy sand (1), Loam, (class unknown) (1), Medium silt loam (1), Moderately coarse, sandy loam (1)

Geology (field or map data): Sandstone and other sedimentary (18), Granitic (6), Franciscan melange (5), Volcanic and metavolcanic rocks (4), Sandstone, shale, and conglomerate (4), Shale and other sedimentary (2), Calcareous conglomerate

(1), Greenstone (1), Alluvium (1), Sedimentary (type unknown) (1)

San Mateo County Watersheds: Palo Alto (1)

Site Impacts

This association has moderate non-native plant cover (average 24.8%) relative to native cover. Non-native species that occur with highest frequency and abundance include *Aira caryophyllea*, *Anagallis arvensis*, *Avena* spp., *Brachypodium distachyon*, *Briza minor*, *Bromus diandrus*, *Bromus hordeaceus*, *Carduus pycnocephalus*, *Cirsium vulgare*, *Conium maculatum*, *Geranium dissectum*, *Holcus lanatus*, *Hypochaeris radicata*, *Linum bienne*, *Lolium perenne*, *Lotus corniculatus*, *Phalaris aquatica*, *Plantago lanceolata*, *Rumex acetosella*, *Sonchus asper*, *Trifolium angustifolium*, *Trifolium dubium*, *Vicia sativa*, *Vicia tetrasperma*, and *Vulpia bromoides*.

Classification Comments

This association definition has been revised to include the previously accepted *Baccharis pilularis* – *Rubus ursinus* / weedy herb Association from Point Reyes (Keeler-Wolf et al. 2003a).

Baccharis pilularis – (*Frangula californica*) – *Rubus* spp. Association
Baccharis pilularis Shrubland Alliance

Baccharis pilularis – Artemisia californica Association

Common Name: Coyote Brush – California Sagebrush Shrubland

Alliance: *Baccharis pilularis* Shrubland Alliance

Local Vegetation Description

The Coyote Brush – California Sagebrush Association forms an intermittent to continuous shrub layer. The emergent tree layer is typically sparse, and the herbaceous layer is sparse to intermittent. Dominant and characteristic shrubs include *Baccharis pilularis*, *Artemisia californica*, *Diplacus aurantiacus*, and *Toxicodendron diversilobum*, and those that are often present include *Frangula californica* and *Rubus ursinus*. Herbs that are sometimes present include *Anagallis arvensis*, *Chlorogalum pomeridianum*, *Clinopodium douglasii*, *Eriophyllum stoechadifolium*, *Monardella villosa*, *Pteridium aquilinum*, *Sanicula crassicaulis*, *Scrophularia californica*, and *Symphyotrichum chilense*.

***Baccharis pilularis* / Annual grass – herb Association**

Common Name: Coyote Brush / Annual Grass-Herb Shrubland

Alliance: *Baccharis pilularis* Shrubland Alliance

Local Vegetation Description

The Coyote Brush / Annual Grass-Herb Association forms an open to intermittent shrub layer. The emergent tree layer is typically sparse to open, and the herbaceous layer is intermittent to continuous. Dominant and characteristic shrubs include *Baccharis pilularis* with *Rubus ursinus*, and those that are often present include *Toxicodendron diversilobum*. Commonly associated emergent trees at sparse cover include *Quercus agrifolia*. The herbaceous layer typically includes *Anagallis arvensis* and *Avena* spp., and herbs that are often present include *Brachypodium distachyon*, *Briza minor*, *Bromus diandrus*, *Bromus hordeaceus*, *Cirsium vulgare*, *Geranium dissectum*, *Lotus corniculatus*, *Phalaris aquatica*, *Plantago lanceolata*, *Sisyrinchium bellum*, *Vicia sativa*, and *Vulpia bromoides*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	2.5	0 – 5	no data	no data
Hardwood	0.0	0 – 0	no data	no data

Shrub	32.5	15.0 – 50.0	1.9	0 – 5
Herb	65.0	45 – 85	0.3	0 – 0.5

Local Environmental Description

Elevation: Mean 147 m, Range 66 – 366 m

Aspect: SW (1)

Slope: Mean 18 degrees, Range 15 – 20 degrees

Macro Topography: Middle 1/3 of slope (1)

Large Rock: 0.0%

Small Rock: Mean 0.1%, Range 0.0 – 1.0%

Fines Cover: Mean 50.4%, Range 5.0 – 70.4%

Litter Cover: Mean 38.7%, Range 1.0 – 50.9%

Soil Texture (field assessed): Moderately fine silty clay loam (1)

Geology (field or map data): Sandstone and other sedimentary (10), Sandstone, shale, and gravel deposits (1), Volcanic and metavolcanic rocks (1), Sandstone, shale, and conglomerate (1), Alluvium (1)

San Mateo County Watersheds: Pescadero Creek (8), Ano Nuevo (2), San Mateo Bayside (2), San Francisco Coastal (1), Tunitas Creek (1)

Site Impacts

Baccharis pilularis / Annual grass – herb Association
Baccharis pilularis Shrubland Alliance

This association has greater cover of exotics (average 66.6%) than natives. Non-native species that occur with highest frequency and abundance include *Aira caryophyllea*, *Anagallis arvensis*, *Avena* spp., *Brachypodium distachyon*, *Briza minor*, *Bromus diandrus*, *Bromus hordeaceus*, *Carduus pycnocephalus*, *Cirsium vulgare*, *Conium maculatum*, *Dactylis glomerata*, *Geranium dissectum*, *Holcus lanatus*, *Hypochaeris glabra*, *Hypochaeris radicata*, *Linum bienne*, *Linum usitatissimum*, *Lolium perenne*, *Lotus corniculatus*, *Medicago* spp., *Phalaris aquatica*, *Plantago lanceolata*, *Rumex acetosella*, *Sonchus asper*, *Trifolium angustifolium*, *Trifolium dubium*, *Vicia sativa*, *Vicia tetrasperma*, *Vulpia bromoides*, and *Vulpia myuros*.

Classification Comments

Since the number of surveys of this association in San Mateo County are low, data from nearby counties were included.

Baccharis pilularis Shrubland Alliance

***Baccharis pilularis / Carex obnupta – Juncus patens* Provisional Association**

Common Name: Coyote Brush / Slough Sedge – Common Rush Shrubland

Alliance: *Baccharis pilularis* Shrubland Alliance

Local Vegetation Description

The Coyote Brush / Slough Sedge – Common Rush Association forms an open to intermittent shrub layer. The emergent tree layer is typically absent, and the herbaceous layer is open to continuous. Dominant and characteristic shrubs include *Baccharis pilularis* with *Rubus ursinus*. The herbaceous layer typically includes *Juncus patens*, and herbs that are often present include *Carex obnupta* and *Holcus lanatus*. Herbs that are sometimes present include *Achillea millefolium*, *Carex* spp., *Cirsium vulgare*, *Conium maculatum*, *Iris douglasiana*, *Juncus effusus*, *Lolium perenne*, and *Plantago lanceolata*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range

Baccharis pilularis / Carex obnupta – Juncus patens Provisional Association
Baccharis pilularis Shrubland Alliance

***Baccharis pilularis / Danthonia californica* Association**

Common Name: Coyote Brush / California Oatgrass Shrubland

Alliance: *Baccharis pilularis* Shrubland Alliance

Local Vegetation Description

The Coyote Brush / California Oatgrass Association forms an open to intermittent shrub layer. The emergent tree layer is typically sparse to open, and the herbaceous layer is intermittent to continuous. Dominant and characteristic shrubs include *Baccharis pilularis* with *Rubus ursinus*, and those that are often present include *Frangula californica* and *Toxicodendron diversilobum*. Commonly associated emergent trees at sparse cover include *Pseudotsuga menziesii*. The herbaceous layer typically includes *Danthonia californica*, *Aira caryophyllea*, *Brachypodium distachyon*, and *Plantago lanceolata*, and herbs that are often present include *Anagallis arvensis*, *Briza minor*, *Bromus hordeaceus*, *Camissonia ovata*, *Cirsium vulgare*, *Geranium dissectum*, *Holcus lanatus*, *Hypochaeris radicata*, *Juncus patens*, *Linum bienne*, *Lotus corniculatus*, *Pteridium aquilinum*, *Rumex acetosella*, *Sisyrinchium bellum*, *Symphytum chilense*, *Trifolium angustifolium*, *Vicia sativa*, *Vicia tetrasperma*, and *Vulpia bromoides*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	2.4	0 – 15	no data	no data
Hardwood	0.0	0 – 1	no data	no data
Regenerating or Shubby Tree	0.0	0 – 0	no data	no data
Shrub	35.1	15.2 – 64.0	1.4	0 – 5
Herb	62.5	50 – 80	0.3	0 – 0.5

Local Environmental Description

Elevation: Mean 87 m, Range 27 – 182 m

Aspect: SW (2), W (1)

Slope: 3 degrees (1)

Macro Topography: Bench (2), Ridge top (1)

Large Rock: 0.0%

Small Rock: 0.0%

Fines Cover: Mean 57.5%, Range 50.3 – 72.8%

Litter Cover: Mean 42.4%, Range 27.2 – 49.7%

Soil Texture (field assessed): Clay, (class unknown) (3)

Geology (field or map data): Sandstone and other sedimentary (7), Sandstone, shale, and conglomerate (7), Alluvium (2)

San Mateo County Watersheds: Ano Nuevo (9), Pescadero Creek (6), San Mateo Bayside (1)

Site Impacts

This association has moderate non-native plant cover (average 38.1%) relative to native cover. Non-native species that occur with highest frequency and abundance include *Aira caryophyllea*, *Anagallis arvensis*, *Avena* spp., *Brachypodium distachyon*, *Briza maxima*, *Briza minor*, *Bromus diandrus*, *Bromus hordeaceus*, *Cirsium vulgare*, *Conium maculatum*, *Cortaderia selloana*, *Dactylis glomerata*, *Geranium dissectum*, *Holcus lanatus*, *Hypochaeris radicata*, *Linum bienne*, *Linum usitatissimum*, *Lolium perenne*, *Lotus corniculatus*, *Myosotis discolor*, *Phalaris aquatica*, *Plantago lanceolata*, *Romulea rosea*, *Rumex acetosella*, *Rytidosperma pilosum*, *Sonchus asper*, *Trifolium angustifolium*, *Trifolium dubium*, *Trifolium subterraneum*, *Vicia sativa*, *Vicia tetrasperma*, and *Vulpia bromoides*.

Classification Comments

None.

Baccharis pilularis / Danthonia californica Association
Baccharis pilularis Shrubland Alliance

***Baccharis pilularis / Eriophyllum staechadifolium* Association**

Common Name: Coyote Brush / Seaside Woolly-sunflower Shrubland

Alliance: *Baccharis pilularis* Shrubland Alliance

Local Vegetation Description

The Coyote Brush / Seaside Woolly-sunflower Association forms an open to continuous shrub layer. The emergent tree layer is typically absent, and the herbaceous layer is open to continuous. Dominant and characteristic shrubs include *Baccharis pilularis*, and those that are often present include *Rubus ursinus*. The herbaceous layer typically includes *Eriophyllum staechadifolium* and *Achillea millefolium*, and herbs that are often present include *Erigeron glaucus*, *Eriogonum latifolium*, *Fragaria chiloensis*, and *Scrophularia californica*.

Local Environmental Description

Elevation: Mean 53 m, Range 7 – 367 m

Aspect: SW (6), Variable (3), NE (3), NW (1), Flat (1), SE (1)

Slope: Mean 13 degrees, Range 0 – 38 degrees

Macro Topography: Bench (4), Upper 1/3 of slope (3), Lower 1/3 of slope (2), Middle 1/3 of slope (2), Bottom to Lower 1/3 of slope (1), Lower to Middle 1/3 of slope (1), Ridge top (1), Terrace (former shoreline or floodplain) (1)

Large Rock: Mean 0.6%, Range 0.0 – 6.0%

Small Rock: Mean 3.0%, Range 0.0 – 20.0%

Fines Cover: Mean 53.6%, Range 8.0 – 92.0%

Litter Cover: Mean 33.2%, Range 0.0 – 90%

Soil Texture (field assessed): Loam, (class unknown) (4), Medium to very fine, sandy loam (2), Sand, (class unknown) (2), Not recorded (2), Moderately fine sandy clay loam (1), Medium sand (1), Fine clay (1), Coarse, loamy sand (1), Moderately fine clay loam (1)

Geology (field or map data): Sandstone and other sedimentary (7), Sandstone (3), Alluvium (1), Calcareous sandstone (1), Granitic (generic) (1), Sand dunes (1), Volcanic and metavolcanic rocks (1)

San Mateo County Watersheds: Pacifica (7), Ano Nuevo (3), Pescadero Creek (3), Tunitas Creek (2), San Francisco Coastal (1)

Baccharis pilularis / Eriophyllum staechadifolium Association
Baccharis pilularis Shrubland Alliance

Other Watersheds, San Francisco Co.: San Francisco Coastal (1)

Site Impacts

This association has low non-native plant cover (average 5.6%) relative to native cover. Non-native species that occur with highest frequency and abundance include *Anagallis arvensis*, *Bromus diandrus*, *Carpobrotus edulis*, *Geranium dissectum*, *Hypochaeris radicata*, *Plantago coronopus*, *Plantago lanceolata*, *Rumex acetosella*, and *Vulpia bromoides*.

Classification Comments

Since the number of surveys of this association in San Mateo County are low, data from nearby counties were included.

***Garrya elliptica* Provisional Association**

Common Name: Coast silk tassel Shrubland

Alliance: *Baccharis pilularis* Shrubland Alliance

Local Vegetation Description

The Coast silk tassel Association forms an intermittent to continuous shrub layer. The emergent tree layer is typically sparse to open, and the herbaceous layer is open to intermittent. Dominant and characteristic shrubs include *Garrya elliptica*, *Baccharis pilularis*, and *Toxicodendron diversilobum*, and those that are often present include *Artemisia californica*, *Frangula californica*, and *Holodiscus discolor*. The herbaceous layer typically includes *Polystichum munitum* and *Pteridium aquilinum*, and herbs that are sometimes present include *Monardella villosa*.

Site Impacts

This association has very low non-native plant cover (average 0.2%) relative to native cover. Non-native species that occur with highest frequency and abundance include *Anagallis arvensis*, *Hypochaeris radicata*, and *Plantago lanceolata*.

Classification Comments

Garrya elliptica Provisional Association
Baccharis pilularis Shrubland Alliance

This association was originally placed in its own provisional alliance in Point Reyes (Keeler-Wolf et al. 2003a). It is considered provisional since it is under-sampled in its expected range. Since the number of surveys of this association in San Mateo County are low, data from nearby counties were included.

Ceanothus cuneatus Shrubland Alliance

Common Name: Wedge leaf ceanothus chaparral, Buck brush chaparral

NVC Alliance Code: A3869. Ceanothus cuneatus Chaparral Alliance

Statewide Description

Ceanothus cuneatus is dominant or co-dominant in the shrub canopy with *Adenostoma fasciculatum*, *Arctostaphylos glauca*, *Arctostaphylos manzanita*, *Arctostaphylos patula*, *Arctostaphylos tomentosa*, *Ceanothus integerrimus*, *Cercocarpus montanus*, *Eriogonum fasciculatum*, *Garrya fremontii*, *Hesperoyucca whipplei*, *Heteromeles arbutifolia*, *Quercus berberidifolia*, *Quercus john-tuckeri*, *Rhus ovata*, and *Salvia mellifera*.

Emergent trees may be present at low cover, including *Calocedrus decurrens*, *Juniperus californica*, *Pinus jeffreyi*, *Pinus ponderosa*, *Pinus sabiniana*, *Quercus douglasii*, or *Quercus wislizeni*.

Ceanothus cuneatus occurs as an understory shrub in various forest and woodland types in northern California, and it is present as a secondary species in many chaparral alliances in California. Self-perpetuating stands are typically restricted to rocky, harsh exposures or substrates. Many stands establish after fire, and they form an important part of the chaparral in northern and central California. *Ceanothus cuneatus* stands are often dense, with interlocking crowns that may contain abundant deadwood. *Ceanothus cuneatus* may also form open stands with much bare ground.

Mixed stands with co-dominant *Adenostoma fasciculatum* are common in the central coast and inner North Coast Ranges, and occur more sporadically in the Sierra Nevada

and in southern California. These mixed stands occur on a variety of exposures along steep lower to upper slopes. Substrates are usually sedimentary and metamorphic. Because of ecological overlap between mixed and pure *Ceanothus cuneatus* stands, the former practice of segregating them into separate series or alliances has been discontinued. There are five varieties of *Ceanothus cuneatus* (Fross and Wilken 2006); *Ceanothus cuneatus* var. *cuneatus* and *C. cuneatus* var. *ramulosus* are included in this alliance.

Local Vegetation Description

The Wedge leaf ceanothus chaparral, Buck brush chaparral Alliance forms an intermittent to continuous shrub layer. The herbaceous layer is sparse. Dominant and characteristic shrubs include *Ceanothus cuneatus*, *Adenostoma fasciculatum*, *Baccharis pilularis*, *Diplacus aurantiacus*, *Heteromeles arbutifolia*, *Lepechinia calycina*, and *Toxicodendron diversilobum*, and those that are often present include *Arctostaphylos crustacea* and *Lotus scoparius*. Herbs that are often present include *Anagallis arvensis*, *Chlorogalum pomeridianum*, *Marah fabaceus*, *Sanicula crassicaulis*, *Scrophularia californica*, and *Zigadenus fremontii*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	0.5	0 – 2	3.5	2 – 5
Hardwood	0.0	0 – 0	no data	no data
Regenerating or Shrubby Tree	1.3	0.0 – 5.0	3.5	2 – 5
Shrub	71.5	42.0 – 90.0	3.0	1 – 5
Herb	2.3	0 – 3	0.3	0 – 0.5

Local Membership Rule

Ceanothus cuneatus dominates or co-dominates with *Adenostoma fasciculatum*, often on convexities with westerly exposures. A variety of shrubs may intermix, including *Arctostaphylos*, *Baccharis*, *Eriodictyon*, *Heteromeles*, *Quercus durata*, and others.

Local Environmental Description

Elevation: Mean 180 m, Range 115 – 222 m

Aspect: NE (1), SE (1), SW (1)

***Ceanothus cuneatus – Adenostoma fasciculatum* Association**

Common Name: Wedgeleaf Ceanothus – Chamise Shrubland

Alliance: *Ceanothus cuneatus* Shrubland Alliance

Local Vegetation Description

The Wedgeleaf Ceanothus – Chamise Association forms a continuous shrub layer. The emergent tree layer is typically sparse, and the herbaceous layer is sparse to continuous. Dominant and characteristic shrubs include *Adenostoma fasciculatum*, *Ceanothus cuneatus*, and *Diplacus aurantiacus*, and those that are often present include *Baccharis pilularis*, *Heteromeles arbutifolia*, *Lepechinia calycina*, and *Toxicodendron diversilobum*. Herbs that are sometimes present include *Chlorogalum pomeridianum*, *Galium porrigens*, *Marah fabaceus*, *Pentagramma triangularis*, and *Zigadenus fremontii*.

***Ceanothus thyrsiflorus* Shrubland Alliance**

Common Name: Blue blossom chaparral

NVC Alliance Code: A0741. *Ceanothus thyrsiflorus* Scrub Alliance

Statewide Description

Ceanothus thyrsiflorus is dominant or co-dominant in the shrub canopy with *Adenostoma fasciculatum*, *Arctostaphylos manzanita*, *Baccharis pilularis*, *Ceanothus incanus*, *Ceanothus integerrimus*, *Ceanothus velutinus*, *Gaultheria shallon*, *Heteromeles arbutifolia*, *Lupinus arboreus*, *Quercus berberidifolia*, *Rubus ursinus*, *Toxicodendron diversilobum*, and *Vaccinium ovatum*. Emergent conifer trees may be present at low cover.

The most extensive *Ceanothus thyrsiflorus* stands establish after logging or burning in the outer Coast Ranges of central and northern California. These stands persist for a few decades and are seral to stands of the *Pinus muricata*, *Pseudotsuga menziesii* – *Notholithocarpus densiflorus*, and *Sequoia sempervirens* Alliances. Stands on exposed coastal headlands persist for long periods and are frequently associated with *Baccharis pilularis* and *Lupinus arboreus* Alliance shrublands.

Local Vegetation Description

The Blue blossom chaparral Alliance forms an intermittent to continuous shrub layer. The emergent tree layer is typically sparse to open, and the herbaceous layer is sparse to intermittent. Dominant and characteristic shrubs include *Ceanothus thyrsiflorus* and

Rubus ursinus, and those that are often present include *Baccharis pilularis* and *Diplacus aurantiacus*. Commonly associated emergent trees at sparse cover include *Pinus muricata*, *Pseudotsuga menziesii* and *Umbellularia californica*. The herbs that are often present include *Polystichum munitum* and *Pteridium aquilinum*, and herbs that are sometimes present include *Holcus lanatus*.

Local Vegetation Description

The Blue blossom chaparral Alliance forms an intermittent to continuous shrub layer. The emergent tree layer is typically sparse to open, and the herbaceous layer is open. Dominant and characteristic shrubs include *Ceanothus thyrsiflorus*, *Baccharis pilularis*, *Rubus ursinus*, and *Toxicodendron diversilobum*, and those that are often present include *Frangula californica* and *Heteromeles arbutifolia*. Commonly associated emergent trees at sparse cover include *Quercus agrifolia*. *Clinopodium douglasii* is often present in the herbaceous layer, and herbs that are sometimes present include *Chlorogalum pomeridianum*, *Dryopteris arguta*, *Heracleum maximum*, *Iris douglasiana*, *Marah fabaceus*, *Pteridium aquilinum*, *Sanicula crassicaulis*, *Scrophularia californica*, and *Stachys ajugoides*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	0.3	0 – 2	no data	no data
Hardwood	0.9	0 – 5	5.5	2 – 10
Regenerating or Shrubby Tree	0.7	0.0 – 7.0	no data	no data
Shrub	83.7	37.5 – 99.0	3.1	1 – 5
Herb	7.9	0 – 34	0.3	0 – 0.5

Local Membership Rule

Ceanothus thyrsiflorus dominates in the overstory shrub layer, often with moderately dense cover. *Diplacus aurantiacus*, *Heteromeles*, *Pseudotsuga menziesii*, *Quercus wislizeni*, and other species may intermix as sub-dominants in the shrub and tree layers. If *Baccharis pilularis* is present, *Ceanothus thyrsiflorus* is greater in cover. Stands of *C. incanus* are included in the *C. thyrsiflorus* Alliance since they are more limited in distribution and are ecologically similar to *C. thyrsiflorus*.

Local Environmental Description

Elevation: Mean 253 m, Range 93 – 450 m

Aspect: NE (3), NW (3), SE (1)

Slope: Mean 13 degrees, Range 4 – 26 degrees

Macro Topography: Middle 1/3 of slope (3), Upper 1/3 of slope to Ridgetop (1), Ridge top (1), Other (1), Lower 1/3 of slope (1)

Large Rock: Mean 1.1%, Range 0.0 – 4.0%

Small Rock: Mean 3.9%, Range 0.0 – 12.0%

Fines Cover: Mean 34.0%, Range 3.0 – 50.0%

Litter Cover: Mean 30.3%, Range 0.0 – 94%

Soil Texture (field assessed): Medium loam (3), Medium to very fine, sandy loam

Ceanothus thyrsiflorus Shrubland Alliance

(1), Moderately coarse, sandy loam (1), Moderately fine clay loam (1), Moderately fine sandy clay loam (1)

Geology (field or map data): Franciscan melange (7), Volcanic and metavolcanic rocks (3), Mixed metamorphic (2), Sandstone and other sedimentary (2), Granitic (1), Sandstone (1)

San Mateo County Watersheds: San Mateo Bayside (12), Pacifica (2), Half Moon Bay (1), Tunitas Creek (1)

Site Impacts

This alliance has low non-native plant cover (average 1.9%) relative to native cover. Non-native species that occur with highest frequency and abundance include *Conium maculatum*, *Cortaderia jubata*, and *Plantago lanceolata*.

***Cercocarpus montanus* Shrubland Alliance**

Common Name: Birch leaf mountain mahogany chaparral

NVC Alliance Code: A0587. *Cercocarpus montanus* var. *glaber* Mesic Chaparral Alliance

Statewide Description

Cercocarpus montanus is dominant or co-dominant in the shrub or small tree canopy with *Adenostoma fasciculatum*, *Adenostoma sparsifolium*, *Arctostaphylos glandulosa*, *Arctostaphylos glauca*, *Artemisia californica*, *Ceanothus crassifolius*, *Ceanothus cuneatus*, *Ceanothus megacarpus*, *Ceanothus spinosus*, *Eriogonum fasciculatum*, *Eriogonum wrightii*, *Fremontodendron californicum*, *Garrya flavescens*, *Hesperoyucca whipplei*, *Heteromeles arbutifolia*, *Malosma laurina*, *Prunus ilicifolia*, *Quercus berberidifolia*, *Quercus john-tuckeri*, *Rhamnus ilicifolia*, *Salvia apiana*, and *Salvia mellifera*. Emergent trees may be present at low cover, including *Juglans californica*, *Juniperus californica*, *Pinus monophylla*, *Pinus sabiniana*, *Platanus racemosa*, *Quercus agrifolia*, *Quercus chrysolepis*, *Quercus douglasii*, or *Umbellularia californica*.

Most *Cercocarpus montanus* stands are open and they frequently occur on steep, north-facing slopes, where the plant dominates on rocky ridges and steep slopes with thin soil (Uchytil 1991b). They typically occupy rockier sites than do denser *Ceanothus*- and *Quercus*-dominated chaparral types. In many recent taxonomic treatments, *Cercocarpus montanus* is considered to be a widespread polymorphic species throughout the western United States, with several varieties occurring in California. Since the varieties have similar ecology, all are included in this alliance. The most

Cercocarpus montanus Shrubland Alliance

recent California reference (UCB 2004- 2013) uses the names *Cercocarpus betuloides* for *C. montanus* and *Cercocarpus minutiflorus* for *C. montanus* var. *minutiflorus*.

Local Vegetation Description

The Birch leaf mountain mahogany chaparral Alliance forms an open to intermittent shrub layer. The emergent tree layer is typically sparse, and the herbaceous layer is open to intermittent. Dominant and characteristic shrubs include *Cercocarpus betuloides*, *Artemisia californica*, *Prunus ilicifolia*, and *Ribes californicum*, and those that are often present include *Ceanothus cuneatus*, *Clematis lasiantha*, *Heteromeles arbutifolia*, *Oemleria cerasiformis*, *Rhamnus crocea*, *Sambucus nigra*, *Symporicarpos albus*, and *Toxicodendron diversilobum*. Regenerating or shrubby trees that are often present include *Quercus agrifolia* and *Umbellularia californica*. Commonly associated emergent trees at sparse cover include *Quercus agrifolia*. The herbaceous layer typically includes *Thalictrum fendleri*, *Chlorogalum pomeridianum*, *Delphinium californicum*, *Dichelostemma* spp., and *Marah fabaceus*, and herbs that are often present include *Adiantum jordanii*, *Claytonia perfoliata*, *Cynoglossum grande*, *Dryopteris arguta*, *Galium porrigens*, *Helenium puberulum*, *Melica torreyana*, *Pentagramma triangularis*, *Torilis arvensis*, and *Zigadenus fremontii*. Commonly associated non-vascular plants include Moss and Lichen.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	0.0	0 – 0	no data	no data
Hardwood	0.1	0 – 0.2	7.5	5 – 10
Regenerating or Shrubby Tree	0.2	0.0 – 0.4	3.5	2 – 5
Shrub	42.0	26 – 58	2.5	1 – 5
Herb	26.0	2 – 50	0.5	0 – 1

Local Membership Rule

Cercocarpus montanus (=*C. betuloides*) dominates with *Prunus ilicifolia*, *Artemisia californica* and/or *Ribes californicum* often present.

Local Environmental Description

Elevation: Mean 115 m, Range 114 – 116 m

Aspect: NW (1), Variable (1)

Slope: Mean 18 degrees, Range 15 – 21 degrees

Macro Topography: Lower to Upper 1/3 of slope (1), Middle 1/3 of slope (1)

Large Rock: 0.0%

Small Rock: 1.0%

Fines Cover: Mean 48.5%, Range 20.0 – 77.0%

***Cornus sericea* Shrubland Alliance**

Common Name: Red osier thickets

NVC Alliance Code: A3834. *Cornus sericea* Pacific Slope Shrub Swamp Alliance

Statewide Description

Cornus sericea is dominant or co-dominant in the shrub canopy with *Cephalanthus occidentalis*, *Rubus armeniacus*, *Rubus parviflorus*, *Salix exigua* and *Salix lasiolepis*. Emergent trees may be present at low cover, including *Alnus rhombifolia* or *Quercus lobata*.

Hickson and Keeler-Wolf (2007) and Buck-Diaz et al. (2012) recognized two associations in the Central Valley; *S. lasiolepis* occurred as the more common association, and the other appeared to be rarer or was undersampled. Other stands with *Cornus sericea* exist closer to the coast, but more sampling and analysis is needed to determine their relationships. Other stands in the foothills and montane Sierra Nevada to eastern California with *Cornus sericea* are now placed in a separate mixed riparian alliance with *Rosa woodsii* and other shrubs.

Local Vegetation Description

The Red osier thickets Alliance forms an intermittent to continuous shrub layer. The emergent tree layer is typically sparse to open, and the herbaceous layer is sparse to open. Dominant and characteristic shrubs include *Cornus sericea* and *Rubus ursinus*, and those that are often present include *Baccharis pilularis*, *Salix lasiolepis*, *Sambucus*

racemosa, and *Toxicodendron diversilobum*. Commonly associated emergent trees at sparse cover include *Acer macrophyllum* and *Alnus rubra*. The herbaceous layer typically includes *Scrophularia californica*, and herbs that are often present include *Heracleum maximum*, *Marah fabaceus*, *Myosotis latifolia*, *Polystichum munitum*, *Stachys bullata*, and *Urtica dioica*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	5.0	0 – 25	9.5	1 – 20
Hardwood	0.2	0 – 1	8.0	2 – 15
Regenerating or Shrubby Tree	0.5	0.0 – 2.7	2.1	0.5 – 5
Shrub	78.6	60 – 90	3.1	1 – 5
Herb	4.1	0.2 – 10	0.3	0 – 0.5

Local Membership Rule

Cornus sericea is dominant in the shrub layer. Emergent riparian trees and shrubs such as *Rubus ursinus* and *Toxicodendron diversilobum* are often present.

Local Environmental Description

Elevation: Mean 170 m, Range 70 – 496 m

Aspect: Flat (2), SW (2), NE (1)

Slope: Mean 12 degrees, Range 0 – 33 degrees

Macro Topography: Bottom (2), Lower to Middle 1/3 of slope (2), Middle 1/3 of slope (1)

Large Rock: Mean 0.0%, Range 0.0 – 0.0%

Small Rock: Mean 0.0%, Range 0.0 – 0.2%

Fines Cover: Mean 13.6%, Range 5.0 – 40.0%

Litter Cover: Mean 82.6%, Range 52.0 – 92%

Soil Texture (field assessed): Fine silty clay (1), Moderately fine clay loam (1), Moderately fine sandy clay loam (1), Muck (1), Unknown (1)

Geology (field or map data): Sandstone and other sedimentary (2), Mixed sedimentary (1), Mixed alluvium (1), Franciscan melange (1), Sandstone (1)

San Mateo County Watersheds: Tunitas Creek (2), Ano Nuevo (1), Half Moon Bay (1), Pescadero Creek (1), San Mateo Bayside (1)

Site Impacts

This alliance has low non-native plant cover (average 1.2%) relative to native cover. Non-native species that occur with highest frequency and abundance include *Conium maculatum*, *Holcus lanatus*, *Myosotis latifolia*, and *Rumex crispus*.

***Corylus cornuta* var. *californica* Shrubland Alliance**

Common Name: Hazelnut scrub

NVC Alliance Code: A4089. *Corylus cornuta* var. *californica* Scrub Alliance

Statewide Description

Corylus cornuta is dominant in the shrub canopy with *Holodiscus discolor*, *Marah fabaceus*, *Ribes sanguineum*, *R. parviflorus*, *R. ursinus*, *Toxicodendron diversilobum* and *Vaccinium ovatum*.

Corylus cornuta is a common understory shrub in many forest types because of its extensive range in the United States. The western form, var. *californica*, grows along the Pacific coast; the eastern form, var. *cornuta*, occurs in and east of the Rocky Mountains. NatureServe (2007a) suggests very different environmental conditions for the eastern form, so we include only the western subspecies in this alliance. The western form sprouts only from the root crown and not from lateral root suckers, as in var. *cornuta* (Zimmerman 1991b). Plants grow in moist, well-drained soils and cool, shaded sites on north-facing slopes; along stream banks; in moist, wooded canyons and slopes; and as understory species in woodlands and forests. They also are abundant on stony soils of slopes, on dry and rocky islands, and along stream banks (Zimmerman 1991b). Shrubland stands occur in the coastal fog zone adjacent to stands of the *Pseudotsuga menziesii* and *Pseudotsuga menziesii-Notholithocarpus densiflorus* alliances. The range of the plant is more extensive than is the alliance.

Local Vegetation Description

The Hazelnut scrub Alliance forms an intermittent to continuous shrub layer. The emergent tree layer is typically sparse to open, and the herbaceous layer is open. Dominant and characteristic shrubs include *Corylus cornuta*, *Holodiscus discolor*, *Rubus ursinus*, *Sambucus racemosa*, and *Toxicodendron diversilobum*, and those that are often present include *Baccharis pilularis*, *Frangula californica*, and *Rubus parviflorus*. Commonly associated emergent trees at sparse cover include *Quercus agrifolia* and *Umbellularia californica*. The herbaceous layer typically includes *Polystichum munitum*, and herbs that are often present include *Heracleum maximum*, *Marah fabaceus*, *Pteridium aquilinum*, *Sanicula crassicaulis*, *Stachys bullata*, and *Urtica dioica*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	0.0	0 – 0	no data	no data
Hardwood	2.0	0 – 6	10.0	5 – 15
Regenerating or Shrubby Tree	0.2	0.0 – 1.0	3.9	0.5 – 10
Shrub	77.0	60.0 – 90.0	3.5	2 – 5
Herb	8.5	3 – 23	0.4	0 – 1

Local Membership Rule

Corylus cornuta dominates or co-dominates with *Baccharis pilularis* and other shrubs as a medium-tall scrub on steep concave slopes with northern to eastern exposures surrounded by *Pseudotsuga menziesii*. Other shrubs may include *Baccharis pilularis*, *Frangula californica*, *Rubus ursinus*, *Vaccinium ovatum*, and *Toxicodendron diversilobum*. Stands occur in the southern portion of Inverness Ridge.

Local Environmental Description

Elevation: Mean 355 m, Range 110 – 509 m

Aspect: NE (3), NW (1)

Slope: Mean 27 degrees, Range 22 – 35 degrees

Macro Topography: Middle to Upper 1/3 of slope (2), Upper 1/3 of slope (1), Middle 1/3 of slope (1)

Large Rock: 0.0%

Small Rock: Mean 0.7%, Range 0.0 – 2.2%

Fines Cover: Mean 6.7%, Range 0.0 – 10.0%

Litter Cover: Mean 89.0%, Range 85.0 – 97%

Soil Texture (field assessed): Moderately fine silty clay loam (1), Unknown (1),
Moderately coarse, sandy loam (1), Coarse, loamy sand (1)

Geology (field or map data): Granitic (2), Granitic (generic) (2), Mixed metamorphic (1),
Sandstone (1)

San Mateo County Watersheds: Pacifica (4), Half Moon Bay (2)

Site Impacts

This alliance has very low non-native plant cover (average 0.7%) relative to native cover.

Non-native species that occur with highest frequency and abundance include *Hypochaeris radicata*, *Myosotis latifolia*, and *Plantago lanceolata*.

Common Name: Hazel / Western Sword Fern Shrubland

Alliance: *Corylus cornuta* var. *californica* Shrubland Alliance

Classification Comments

The association circumscription is the same as that of the alliance for the county. See above for detailed description.

***Cytisus scoparius* – *Genista monspessulana* – *Cotoneaster spp.* Shrubland Semi- Natural Alliance**

Common Name: Broom patches

NVC Alliance Code: A2062. *Cytisus scoparius* - *Ulex europaeus* Coastal Ruderal Scrub Alliance

Statewide Description

Cytisus scoparius, *Genista monspessulana*, *Spartium junceum*, *Ulex europaeus* or other broom species are dominant in the shrub canopy. Additionally, stands of *Cotoneaster lacteus*, *Cotoneaster pannosus*, *Pyracantha*, or other Mediterranean shrubs may be dominant and are also placed in this alliance.

Emergent trees may be present at low cover.

Cytisus scoparius, Scotch broom, has a Cal-IPC rank of High and a CDFA list of C. It has 5-angled stems, few leaves, and bright yellow to maroon flowers. Stands occur throughout northern cismontane California. The typical variety with yellow flowers (var. *scoparius*) is joined along the Northern California Coast (263A) with var. *andreasenii*, with brownish-red wing petals and yellow standard (DiTomaso and Healy 2007).

Genista monspessulana, French broom, has a Cal-IPC rank of High and a CDFA list of C. It has 8-10- ridged stems, leafy branches, and small clusters of yellow flowers. Stands occur throughout cismontane California. Many stands on the Central California Coast (261A) are hybrids with *G. canariensis* or *G. stenopetala* (DiTomaso and Healy 2007).

Local Vegetation Description

The Broom patches Alliance forms an intermittent to continuous shrub layer. The emergent tree layer is typically sparse to open, and the herbaceous layer is sparse to open. Dominant shrubs may include *Genista monspessulana*, *Hypericum canariense*, and *Ulex europaeus*. and characteristic shrubs include *Baccharis pilularis*, *Rubus ursinus*, and *Toxicodendron diversilobum*. Commonly associated emergent trees at sparse cover include *Hesperocyparis macrocarpa*, *Eucalyptus globulus*, *Pinus radiata*, *Pseudotsuga menziesii*, and *Quercus wislizeni*. Herbs that are sometimes present include *Achillea millefolium*, *Aira caryophyllea*, *Anagallis arvensis*, *Carduus pycnocephalus*, *Centaurium muehlenbergii*, *Chlorogalum pomeridianum*, *Clinopodium douglasii*, *Conium maculatum*, *Cortaderia jubata*, *Delairea odorata*, *Dryopteris arguta*, *Eriophyllum stoechadifolium*, *Heracleum maximum*, *Iris douglasiana*, *Juncus patens*, *Marah fabaceus*, *Sanicula crassicaulis*, *Scrophularia californica*, *Sonchus asper*, *Stachys bullata*, and *Symphyotrichum chilense*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	2.0	0 – 7	7.5	5 – 10
Hardwood	0.6	0 – 3	3.5	2 – 5
Regenerating or Shrubby Tree	0.0	0.0 – 0.2	1.5	1 – 2
Shrub	80.0	65.0 – 85.0	2.0	1 – 5
Herb	2.8	0 – 5	0.3	0 – 0.5

Local Membership Rule

Cistus spp., *Cotoneaster* spp., *Cytisus scoparius*, *Genista monspessulana*, *Ulex europaeus*, or other broom plants dominate in the shrub overstory. Fire promotes invasions in woodland settings; however, broom or other non-native Mediterranean scrub may invade coastal grasslands without fire.

Local Environmental Description

Elevation: Mean 166 m, Range 18 – 466 m

Aspect: SW (3), SE (1)

Slope: Mean 8 degrees, Range 0 – 15 degrees

Macro Topography: Lower 1/3 of slope (1), Middle 1/3 of slope (1), Ridge top (1), Upper 1/3 of slope to Ridgetop (1)

Large Rock: Mean 1.3%, Range 0.0 – 5.0%

Small Rock: Mean 1.4%, Range 0.0 – 5.0%

Fines Cover: Mean 18.0%, Range 3.0 – 57.0%

Litter Cover: Mean 74.0%, Range 40.0 – 94%

Soil Texture (field assessed): Medium loam (1), Medium sand (1), Medium to very fine, sandy loam (1), Coarse, loamy sand (1)

Geology (field or map data): Sandstone (1), Sandstone and other sedimentary (1), Mixed metamorphic (1), Metamorphic (type unknown) (1), Franciscan melange (1)

San Mateo County Watersheds: Ano Nuevo (2), Half Moon Bay (1), San Francisco

Coastal (1), San Mateo Bayside (1)

Site Impacts

This alliance has greater cover of exotics than natives, non-native plant cover averages 83.5% relative to native cover. Non-native species that occur with highest frequency and abundance include *Aira caryophyllea*, *Anagallis arvensis*, *Carduus pycnocephalus*, *Conium maculatum*, *Cortaderia jubata*, *Delairea odorata*, *Eucalyptus globulus*, *Genista monspessulana*, *Hypericum canariense*, *Rubus armeniacus*, *Sonchus asper*, and *Ulex europaeus*.

Diplacus aurantiacus Shrubland Alliance

Common Name: Bush monkeyflower scrub

NVC Alliance Code: A2672. *Dendromecon rigida* - *Diplacus aurantiacus* - *Eriodictyon californicum* Scrub Alliance

Statewide Description

Diplacus aurantiacus or *Diplacus parviflorus* is dominant in the shrub canopy with *Artemisia californica*, *Baccharis pilularis*, *Ceanothus megacarpus*, *Ceanothus spinosus*, *Eriogonum cinereum*, *Heteromeles arbutifolia*, *Malosma laurina*, *Salvia leucophylla*, *Salvia mellifera*, *Sambucus nigra* and *Toxicodendron diversilobum*. Emergent trees may be present at low cover, including *Juglans californica*, *Platanus racemosa* or *Quercus agrifolia*.

Diplacus aurantiacus is a widespread plant in many coastal scrub, chaparral, and woodland alliances (Rundel 2007), but the presence of stands primarily dominated by this species leaves little doubt that this is a distinct type. The alliance appears on generally steep, often somewhat unstable slopes in relatively mesic settings within the general vicinity of recent burns and stands of *Artemisia californica*, *Quercus agrifolia*, or *Salvia leucophylla* alliances. In some cases, this type also appears to be associated with natural ground disturbances, such as rockslides (Keeler-Wolf and Evens 2006) and road cuts.

Local Vegetation Description

The Bush monkeyflower scrub Alliance forms an intermittent shrub layer. The emergent tree layer is typically sparse to open, and the herbaceous layer is open to intermittent. Dominant and characteristic shrubs include *Diplacus aurantiacus* and *Baccharis pilularis*, and those that are often present include *Toxicodendron diversilobum*. Commonly associated emergent trees at sparse cover include *Pseudotsuga menziesii*. Herbs that are often present include *Anagallis arvensis*, *Logfia gallica*, *Pteridium aquilinum*, and *Vulpia myuros*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	5.0	5 – 5	12.5	10 – 15
Hardwood	0.0	0 – 0	no data	no data
Regenerating or Shrubby Tree	0.1	0.0 – 0.4	3.5	2 – 5
Shrub	52.5	45 – 60	0.9	0 – 2
Herb	34.0	10 – 62	0.3	0 – 0.5

Local Membership Rule

Diplacus aurantiacus dominates often on steep slopes and ridgetops. Other coastal scrub may be present at lower cover. If *D. aurantiacus* is co-dominant with *Adenostoma fasciculatum* or *Artemisia californica*, see those respective alliances.

Local Environmental Description

Elevation: Mean 246 m, Range 80 – 530 m

Aspect: SW (2), W (1)

Slope: Mean 17 degrees, Range 15 – 18 degrees

Macro Topography: Ridge top (2), Upper 1/3 of slope (1)

Large Rock: Mean 2.1%, Range 0.2 – 4.0%

Small Rock: Mean 35.5%, Range 1.0 – 70.0%

Fines Cover: 10.0%

Litter Cover: Mean 46.0%, Range 6.0 – 86%

Soil Texture (field assessed): Coarse, loamy sand (1), Medium to very fine, sandy loam (1)

Geology (field or map data): Franciscan melange (1), Granitic (generic) (1), Sandstone and other sedimentary (1)

San Mateo County Watersheds: Pacifica (1)

Other Watersheds, Marin Co.: Bolinas (2)

Site Impacts

This alliance has low non-native plant cover (average 4.1%) relative to native cover.

Non-native species that occur with highest frequency and abundance include *Anagallis arvensis*, *Brassica nigra*, *Bromus hordeaceus*, *Carduus pycnocephalus*, *Cortaderia jubata*, *Foeniculum vulgare*, *Holcus lanatus*, *Hypochaeris radicata*, *Logfia gallica*, *Plantago lanceolata*, *Rumex acetosella*, *Sonchus asper*, and *Vulpia myuros*.

***Frangula californica* – *Rhododendron occidentale* – *Salix breweri* Shrubland Alliance**

Common Name: California coffee berry – western azalea – Brewer's willow scrub

NVC Alliance Code: N/A.

Statewide Description

The nominate species of the alliance were given separate alliance status in Sawyer et al. (2009). Recent peer reviewers of the NVC merged them into a single alliance; the new convention is followed here.

Frangula californica, *Rhododendron occidentale*, and/or *Salix breweri* dominates or co-dominate in the shrub canopy with *Baccharis pilularis*, *Calycanthus occidentalis*, *Corylus cornuta*, *Ericameria pinifolia*, *Eriogonum wrightii*, *Frangula purshiana*, *Garrya veatchii*, *Hoita macrostachya*, *Malus fusca*, *Oemleria cerasiformis*, *Prunus virginiana*, *Ribes roezlii*, *Rubus parviflorus*, *Sambucus nigra*, and *Toxicodendron diversilobum*. Emergent trees may be present at low cover, including *Abies grandis*, *Alnus rubra*, *Picea sitchensis*, *Pseudotsuga menziesii*, *Quercus agrifolia*, *Quercus chrysolepis*, or *Tsuga heterophylla*.

Frangula californica is a morphologically variable and widespread species. It has six subspecies, which have somewhat different ranges but similar ecologies. While upland stands of *Frangula californica* occur on both north- and south-facing slopes along the coast from Big Sur to Point Reyes (Ford and Hayes 2007), only those riparian stands are included in this alliance. Similarly, *Rhododendron occidentale* is a common shrub along streams, seeps, and moist slopes at low to montane elevations throughout most of

cismontane California. Those riparian and spring stands are included in this alliance. More narrowly distributed is *Salix breweri*, where it is restricted to streams and seeps. These three indicator species typically dominate or co-dominate on ultramafic (e.g., serpentine) substrates.

Local Vegetation Description

The California coffee berry – western azalea – Brewer's willow scrub Alliance forms an open to intermittent shrub layer. The emergent tree layer is typically sparse, and the herbaceous layer is open to intermittent. Dominant and characteristic shrubs include *Frangula californica*. Commonly associated emergent trees at sparse cover include *Quercus agrifolia*. The herbaceous layer typically includes *Lolium perenne*, *Cirsium fontinale*, *Juncus* spp., and *Juncus xiphiooides*, and herbs that are often present include *Achillea millefolium*, *Eschscholzia californica*, *Hemizonia congesta*, *Mimulus guttatus*, and *Polypogon monspeliensis*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	0.0	0 – 0	no data	no data
Hardwood	0.3	0 – 1	7.5	5 – 10
Regenerating or Shrubby Tree	0.0	0.0 – 0.0	no data	no data
Shrub	27.3	12.0 – 40.0	3.5	2 – 5
Herb	43.8	25 – 60	0.8	0.5 – 1

Local Membership Rule

Frangula californica and/or *Rhododendron occidentale* dominate or co-dominate with *Rubus*. Stands are found along springs, seeps, and ravines in wetland and riparian settings, often on sedimentary and serpentine substrates that retain water much of the year. If *Frangula californica* is dominant in upland settings along with *Baccharis pilularis* or other upland plants, key to the *Baccharis* alliance.

Local Environmental Description

Elevation: Mean 312 m, Range 167 – 605 m

Aspect: SW (2), Variable (1), Flat (1)

Other Watersheds, Marin Co.: Lagunitas Creek (1); **Santa Clara Co.:** Coyote Creek (3)

Site Impacts

Frangula californica – *Rhododendron occidentale* – *Salix breweri* Shrubland Alliance

This alliance has moderate non-native plant cover (average 23.1%) relative to native cover. Non-native species that occur with highest frequency and abundance include *Aegilops triuncialis*, *Bromus hordeaceus*, *Centaurea solstitialis*, *Cirsium vulgare*, *Lactuca saligna*, *Polypogon monspeliensis*, *Polypogon viridis*, and *Rumex pulcher*.

Associations in San Mateo County

None determined

Classification Comments

Though no samples were surveyed in San Mateo County, this alliance is known from nearby counties and is likely to occur here. This sensitive alliance would benefit from more sampling along springs and seeps.

Gaultheria shallon – Rubus (ursinus) Shrubland Alliance

Common Name: Salal – berry brambles

NVC Alliance Code: N/A (new).

Statewide Description

Rubus parviflorus, *Rubus ursinus*, *Holodiscus discolor*, or *Gaultheria shallon* dominates solely or co-dominate, forming various mixtures in the shrub canopy with *Baccharis pilularis*, *Garrya elliptica*, *Gaultheria shallon*, *Heracleum maximum*, *Lonicera involucrata*, *Marah oreganus*, *Morella californica*, *Ribes menziesii*, *Sambucus racemosa*, *Toxicodendron diversilobum*, and *Vaccinium ovatum*. Emergent trees may be present at low cover, including *Picea sitchensis*, *Pinus muricata*, or *Pseudotsuga menziesii*.

The nominate species of this alliance were segregated from the previous *Rubus* spp. Alliance in Sawyer et al. (2009) based on peer review of the NVC and interpretation of California data. The new convention is followed here: Stands, which were previously thought to be part of a mixed *Rubus* Alliance (Sawyer et al. 2009), have recently been reconsidered as two different alliances (*Morella californica* – *Rubus spectabilis* and *Gaultheria shallon* – *Rubus (ursinus)* Provisional Alliances). *Holodiscus discolor*, *Rubus ursinus* and *Gaultheria shallon* are widespread shrubs found in mesic woodlands and forests in the coastal areas of central and northern California. These species tend to emerge from forest or woodland cover on exposed coastal bluffs or in coastal grasslands.

Local Vegetation Description

The Salal – berry brambles Alliance forms an open to continuous shrub layer. The emergent tree layer is typically sparse to open, and the herbaceous layer is sparse to continuous. Dominant and characteristic shrubs include *Rubus ursinus*, *Baccharis pilularis*, and *Toxicodendron diversilobum*, and those that are often present include *Frangula californica*. Herbs that are often present include *Heracleum maximum*, *Polystichum munitum*, *Scrophularia californica*, and herbs that are sometimes present include *Dryopteris arguta*, *Eriophyllum stoechadifolium*, *Iris douglasiana*, *Marah fabaceus*, *Pteridium aquilinum*, *Stachys bullata*, *Symphytum chilense*, and *Urtica dioica*.

***Holodiscus discolor – Baccharis pilularis – Rubus ursinus* Association**

Common Name: Ocean Spray – Coyote Brush – California Blackberry Shrubland

Alliance: *Gaultheria shallon – Rubus (ursinus)* Shrubland Alliance

Local Vegetation Description

The Ocean Spray – Coyote Brush – California Blackberry Association forms a continuous shrub layer. The emergent tree layer is typically sparse to open, and the herbaceous layer is open. Dominant and characteristic shrubs include *Holodiscus discolor*, *Baccharis pilularis*, *Rubus ursinus*, and *Toxicodendron diversilobum*, and those that are often present include *Frangula californica*, *Oemleria cerasiformis*, and *Sambucus racemosa*. Commonly associated emergent trees at sparse cover include *Umbellularia californica*. Herbs that are often present include *Dryopteris arguta*, *Heracleum maximum*, *Stachys bullata*, and *Scrophularia californica*, and herbs that are sometimes present include *Eriophyllum stoechadifolium*, *Maianthemum canadense*, *Marah fabaceus*, and *Polystichum munitum*.

San Mateo County Watersheds: Half Moon Bay (2), Pacifica (1), San Mateo Bayside (1)

Holodiscus discolor – Baccharis pilularis – Rubus ursinus Association
Gaultheria shallon – Rubus (ursinus) Shrubland Alliance

Site Impacts

This association has very low non-native plant cover (average 0.1%) relative to native cover. Non-native species that occur with highest frequency and abundance include *Cerastium glomeratum* and *Sonchus asper*.

Classification Comments

The association name *Baccharis pilularis* – *Holodiscus discolor* was used in the 2003 classification for Point Reyes, and placed in the *Baccharis pilularis* Alliance. Additional data and analysis have led us to lump that concept into this new association.

Local Environmental Description

Elevation: Mean 303 m, Range 20 – 535 m

Aspect: NE (2), NW (2), Variable (1)

Slope: Mean 22 degrees, Range 5 – 43 degrees

Macro Topography: Upper 1/3 of slope (3), Middle 1/3 of slope (1), Bottom to Lower 1/3 of slope (1)

Large Rock: 0.0%

Small Rock: Mean 1.0%, Range 0.0 – 5.0%

Fines Cover: Mean 16.4%, Range 5.0 – 50.0%

Litter Cover: Mean 78.8%, Range 40.0 – 91%

Soil Texture (field assessed): Medium loam (2), Moderately coarse, sandy loam (2), Medium to very fine, loamy sand (1)

Geology (field or map data): Granitic (generic) (2), Mixed sedimentary (1), Volcanic and metavolcanic rocks (1), Sandstone, shale, and conglomerate (1)

San Mateo County Watersheds: Pacifica (3), Half Moon Bay (1), Pescadero Creek (1)

Site Impacts

This association has low non-native plant cover (average 1.5%) relative to native cover. Non-native species that occur with highest frequency and abundance include *Delairea*

odorata.

Classification Comments

This association was previously placed in the *Rubus (parviflorus, spectabilis, ursinus)* Alliance (Sawyer et al. 2009) and in the *Morella californica – Rubus spectabilis* Alliance (Klein et al. 2015) but is now being placed here since it primarily occurs in upland forest edges and coastal scrub situations.

Rubus ursinus Association
Gaultheria shallon – Rubus (ursinus) Shrubland Alliance

***Lotus scoparius* – *Lupinus albifrons* – *Eriodictyon* spp. Shrubland Alliance**

Common Name: Deer weed – silver bush lupine – yerba santa scrub

NVC Alliance Code: A3886. *Lotus scoparius* - *Lupinus albifrons* Scrub Alliance

Statewide Description

Lotus scoparius or *Lupinus albifrons*, *Eriodictyon californicum* or another *Eriodictyon* sp. is dominant or co-dominant in the shrub canopy with *Adenostoma fasciculatum*, *Artemisia californica*, *Baccharis pilularis*, *Ephedra californica*, *Ericameria linearifolia*, *Eriodictyon californicum*, *Eriogonum fasciculatum*, *Hazardia squarrosa*, *Malacothamnus densiflorus*, *Prunus fremontii*, *Rhus ovata*, *Ribes quercetorum* and *Salvia apiana*.

Lotus scoparius, *Lupinus albifrons*, and *Eriodictyon californicum* are early colonizing shrubs of disturbed sites throughout much of central and southern California. Stands of the alliance dominate recently burned patches of chaparral and coastal scrub (e.g., *Adenostoma fasciculatum*, *Artemisia californica*, and *Eriogonum fasciculatum* alliances).

Local Vegetation Description

The Deer weed – silver bush lupine – yerba santa scrub Alliance forms an intermittent to continuous shrub layer. The emergent tree layer is typically sparse, and the herbaceous layer is sparse to open. Dominant and characteristic shrubs include *Lotus scoparius*, *Baccharis pilularis*, and *Rubus ursinus*, and those that are often present include *Ceanothus thyrsiflorus*, *Diplacus aurantiacus*, *Eriodictyon californicum*, *Lotus scoparius* – *Lupinus albifrons* – *Eriodictyon* spp. Shrubland Alliance

Frangula californica, and *Toxicodendron diversilobum*. Commonly associated emergent trees at sparse cover include *Quercus agrifolia* and *Umbellularia californica*. The herbs that are often present include *Avena* spp., *Bromus diandrus*, *Heracleum maximum*, *Marah fabaceus*, *Pseudognaphalium* spp., *Rumex acetosella*, *Scrophularia californica*, *Silene gallica*, *Stachys bullata*, and *Vulpia myuros*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	0.0	0 – 0	no data	no data
Hardwood	0.1	0 – 0.2	3.5	2 – 5
Regenerating or Shrubby Tree	0.1	0.0 – 0.2	1.5	1 – 2
Shrub	70.0	55.0 – 80.0	1.3	0.5 – 2
Herb	5.3	1 – 10	0.4	0 – 1

Local Membership Rule

Eriodictyon californicum, *Lotus scoparius*, *Pickeringia montana*, or *Lupinus albifrons* dominates or co-dominates with other seral scrub, often in stands that are open and/or display recent evidence of fire or other disturbance such as road cuts. Other coastal scrub may be present at lower cover, including *Artemisia californica*, *Baccharis pilularis*, and *Toxicodendron diversilobum*. The understory may be composed of mixed native and non-natives that sometimes have higher cover than the overstory shrubs.

Local Environmental Description

Elevation: Mean 369 m, Range 114 – 598 m

Aspect: NE (1), NW (1), SW (1)

Slope: Mean 20 degrees, Range 6 – 45 degrees

Macro Topography: Ridge top (2), Upper 1/3 of slope (1)

Large Rock: 0.0%

Small Rock: Mean 2.4%, Range 0.2 – 5.0%

Fines Cover: Mean 18.3%, Range 5.0 – 45.0%

Litter Cover: Mean 72.3%, Range 31.0 – 92%

Soil Texture (field assessed): Moderately coarse, sandy loam (3)

Geology (field or map data): Sedimentary (type unknown) (1), Sandstone, shale, and conglomerate (1), Granitic (generic) (1), Sandstone (1)

San Mateo County Watersheds: San Mateo Bayside (2), Pacifica (1), Pescadero Creek (1)

Site Impacts

This alliance has low non-native plant cover (average 7.2%) relative to native cover. Non-native species that occur with highest frequency and abundance include *Anagallis arvensis*, *Brassica nigra*, *Bromus diandrus*, *Centaurea melitensis*, *Cortaderia jubata*, *Cynosurus echinatus*, *Gastridium phleoides*, *Hypochaeris glabra*, *Logfia gallica*, *Polygonum aviculare*, *Rumex acetosella*, *Silene gallica*, *Sonchus asper*, *Spergularia rubra*, *Vulpia bromoides*, and *Vulpia myuros*.

Eriodictyon californicum / Herbaceous Association

Common Name: California Yerba Santa Shrubland

Alliance: *Lotus scoparius* – *Lupinus albifrons* – *Eriodictyon* spp. Shrubland Alliance

Local Vegetation Description

The California Yerba Santa Association forms an intermittent to continuous shrub layer. The emergent tree layer is typically absent, and the herbaceous layer is sparse to open. Dominant and characteristic shrubs include *Eriodictyon californicum*, *Baccharis pilularis*, and *Toxicodendron diversilobum*, and those that are often present include *Ceanothus thyrsiflorus*, *Diplacus aurantiacus*, *Frangula californica*, and *Rubus ursinus*. Commonly associated emergent trees at sparse cover include *Arbutus menziesii*, *Pseudotsuga menziesii*, *Quercus agrifolia*, and *Umbellularia californica*. The herbs that are often present include *Heracleum maximum*, *Iris douglasiana*, *Marah fabaceus*, *Pseudognaphalium* spp., *Pteridium aquilinum*, *Scrophularia californica*, and *Stachys bullata*, and herbs that are sometimes present include *Artemisia douglasiana*, *Briza maxima*, *Carex* spp., *Clinopodium douglasii*, *Dryopteris arguta*, *Elymus glaucus*, *Hypericum concinnum*, *Hypochaeris radicata*, *Juncus* spp., *Luzula comosa*, *Phacelia californica*, *Rumex acetosella*, *Sanicula crassicaulis*, *Sonchus asper*, and *Whipplea modesta*.

Lotus scoparius – *Lupinus albifrons* – *Eriodictyon* spp. Shrubland Alliance

San Mateo County Watersheds: Pacifica (1), San Mateo Bayside (1)
Other Watersheds, Marin Co.: San Rafael (1)

Site Impacts

This association has very low non-native plant cover (average 0.4%) relative to native cover. Non-native species that occur with highest frequency and abundance include *Briza maxima*, *Hypochaeris radicata*, *Rumex acetosella*, and *Sonchus asper*.

Classification Comments

Since the number of surveys of this association in San Mateo County are low, data from nearby counties were included.

Lupinus arboreus Shrubland Alliance

Common Name: Yellow bush lupine scrub

NVC Alliance Code: A4120. *Lupinus arboreus* Dune Scrub Alliance

Statewide Description

Lupinus arboreus is dominant or co-dominant in the shrub canopy with *Ammophila arenaria*, *Baccharis pilularis*, *Ericameria ericoides*, and *Lupinus chamissonis*. Emergent trees or tall shrubs may be present at low cover, including *Alnus rubra* or *Morella californica*.

Stands of *Lupinus arboreus* occur natively in central and southern California from Sonoma to Ventura counties. They have become widely naturalized in northern California along the coast from Mendocino and Humboldt Counties to Vancouver, Canada. However, demarcation between native and naturalized populations is still disputed (Pickart 2000). Native stands often occupy stabilized dunes, coastal bluffs, and disturbed areas (e.g., pastures) near the coast, and they appear to have a short temporal nature (Keeler-Wolf et al. 2003a, Ross 2002b). Dune scrub, which includes stands of the native *Lupinus arboreus*, is characteristic of backdunes along the coast, south of Bodega Head in Sonoma County. Dune mat, a collection of annuals and perennials of the *Abronia latifolia* – *Ambrosia chamissonis* Alliance, exists on the northern California coast (Pickart and Barbour 2007) where it covers nearshore dune ridges. Dune mat is now rare. *Lupinus arboreus* aggressively invades dune mat and modifies environmental conditions to facilitate the invasion of non-native annual

grasses, other weeds, and long-lived natives that replaces the dune mat (Pickart 2000, Pickart and Sawyer 1998, Ross2002b).

Local Vegetation Description

The Yellow bush lupine scrub Alliance forms an intermittent to continuous shrub layer. The emergent tree layer is typically sparse, and the herbaceous layer is open to intermittent. Dominant and characteristic shrubs include *Lupinus arboreus* and *Baccharis pilularis*, and those that are often present include *Rubus ursinus*. Commonly associated emergent trees at sparse cover include *Hesperocyparis macrocarpa*. Herbs that are often present include *Bromus diandrus*, *Eriophyllum stoechadifolium*, *Sonchus asper*, and *Vulpia bromoides*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	0.5	0 – 2	3.5	2 – 5
Hardwood	0.0	0 – 0	no data	no data
Regenerating or Shrubby Tree	0.2	0.0 – 1.2	0.8	0.5 – 1
Shrub	50.0	35.0 – 80.0	1.1	0.5 – 2
Herb	26.8	5 – 42	0.4	0 – 1

Local Membership Rule

Lupinus arboreus dominates or co-dominates with *Baccharis pilularis* and/or *Rubus ursinus*, often with high cover of grasses including *Bromus diandrus*, *Holcus lanatus*, *Lolium perenne*, *Vulpia bromoides*, and other non-native herbaceous species.

Local Environmental Description

Elevation: Mean 118 m, Range 13 – 484 m

Aspect: SW (1), SE (1), NW (1), Flat (1), Variable (1)

Slope: Mean 17 degrees, Range 0 – 41 degrees

Macro Topography: Middle 1/3 of slope (2), Bottom to Lower 1/3 of slope (1), Bottom (1), Upper 1/3 of slope to Ridgetop (1)

Large Rock: Mean 0.0%, Range 0.0 – 0.2%

Fines Cover: Mean 29.5%, Range 15.0 – 60.0%

Litter Cover: Mean 52.8%, Range 0.0 – 82%

Soil Texture (field assessed): Medium silt (1), Moderately fine sandy clay loam (1), Sand, (class unknown) (1), Medium sand (1)

Geology (field or map data): Sand dunes (2), Granitic (generic) (1), Mixed sedimentary (1)

San Mateo County Watersheds: Ano Nuevo (1), Pacifica (1), San Francisco Bayside (1), San Francisco Coastal (1), Tunitas Creek (1)

Other Watersheds, San Francisco Co.: San Francisco Bayside (1)

Site Impacts

This alliance has moderate non-native plant cover (average 26.3%) relative to native cover. Non-native species that occur with highest frequency and abundance include *Albizia lophantha*, *Ammophila arenaria*, *Anagallis arvensis*, *Brassica rapa*, *Bromus diandrus*, *Bromus hordeaceus*, *Carduus pycnocephalus*, *Carpobrotus edulis*, *Cirsium vulgare*, *Cortaderia jubata*, *Crassula multicava*, *Delairea odorata*, *Hirschfeldia incana*, *Hypochaeris radicata*, *Lactuca virosa*, *Lobularia maritima*, *Picris echioides*, *Polypogon monspeliensis*, *Pseudognaphalium luteoalbum*, *Raphanus sativus*, *Rumex acetosella*, *Sonchus asper*, *Sonchus oleraceus*, and *Vulpia bromoides*.

Associations in San Mateo County

- *Baccharis pilularis* – *Lupinus arboreus**
- *Lupinus arboreus*

Classification Comments

Since the number of surveys of this association in San Mateo County are low, data from nearby counties were included.

Baccharis pilularis – Lupinus arboreus Association

Common Name: Coyote Brush – Yellow Bush Lupine Shrubland

Alliance: *Lupinus arboreus* Shrubland Alliance

Local Vegetation Description

The Coyote Brush – Yellow Bush Lupine Association forms an intermittent shrub layer in the single sample available. The emergent tree layer is absent, and the herbaceous layer is intermittent. Dominant and characteristic shrubs include *Baccharis pilularis* and *Lupinus arboreus*, and those that are often present include *Lotus scoparius*, *Lupinus chamissonis*, and *Toxicodendron diversilobum*. The herbs that are sometimes present include *Achillea millefolium*, *Bromus diandrus*, *Chlorogalum pomeridianum*, *Claytonia perfoliata*, *Dudleya farinosa*, *Elymus triticoides*, *Eriogonum latifolium*, *Eschscholzia californica*, *Marah fabaceus*, *Melica imperfecta*, *Polypodium californicum*, *Pteridium aquilinum*, and *Vulpia bromoides*.

***Lupinus chamissonis* – *Ericameria ericoides* Shrubland Alliance**

Common Name: Silver dune lupine – mock heather scrub

NVC Alliance Code: A0822. *Isocoma menziesii* - *Lupinus chamissonis* - *Ericameria ericoides* Shrubland Alliance

Statewide Description

Ericameria ericoides and *Lupinus chamissonis* occur together or alone in the shrub canopy with *Artemisia californica*, *Artemisia pycnocephala*, *Ephedra californica*, *Isocoma menziesii*, *Lupinus arboreus*, *Opuntia littoralis*, *Rhus integrifolia*, and *Toxicodendron diversilobum*.

This alliance occurs as isolated patches along the California coastline. It shares species with the *Abronia latifolia* – *Ambrosia chamissonis* Alliance and other coastal bluff scrub alliances. Stands tend to occupy settings on stabilized dunes and near-shore uplifted terraces that are more exposed than other coastal shrubby alliances such as *Lupinus arboreus* or *Baccharis pilularis*.

Local Vegetation Description

The Silver dune lupine – mock heather scrub Alliance forms an intermittent shrub layer. The emergent tree layer is typically absent, and the herbaceous layer is open to intermittent. Dominant and characteristic shrubs include *Ericameria ericoides*, *Lupinus*

chamissonis, and *Baccharis pilularis*, and those that are often present include *Lupinus arboreus*. The herbaceous layer typically includes *Achillea millefolium* and *Bromus diandrus*, and herbs that are often present include *Artemisia pycnocephala*, *Carpobrotus edulis*, *Elymus triticoides*, *Eriogonum latifolium*, *Eriophyllum stoechadifolium*, and *Eschscholzia californica*.

Herb	22.2	2 – 52	0.3	0 – 1

Local Membership Rule

Ericameria ericoides and/or *Lupinus chamissonis* dominate as individuals or in combination as co-dominants with *Baccharis pilularis* or *Lupinus arboreus*.

Local Environmental Description

Elevation: Mean 54 m, Range 9 – 112 m

Aspect: SW (2), Flat (1), NW (1)

Slope: Mean 9 degrees, Range 0 – 19 degrees

Macro Topography: Middle 1/3 of slope (2), Bottom to Lower 1/3 of slope (1), Middle to Upper 1/3 of slope (1)

Large Rock: 0.0%

Small Rock: 0.0%

Fines Cover: Mean 42.2%, Range 10.0 – 88.0%

Litter Cover: Mean 27.2%, Range 1.0 – 87%

Soil Texture (field assessed): Sand, (class unknown) (3), Medium sand (1)

Geology (field or map data): Sand dunes (3), Sandstone and other sedimentary (1), Volcanic and metavolcanic rocks (1)

San Mateo County Watersheds: San Francisco Coastal (4), San Francisco Bayside (3), Ano Nuevo (1)

Other Watersheds, San Francisco Co.: San Francisco Bayside (3), San Francisco Coastal (1)

Site Impacts

This alliance has low non-native plant cover (average 15.1%) relative to native cover. Non-native species that occur with highest frequency and abundance include *Brassica nigra*, *Bromus diandrus*, *Bromus hordeaceus*, *Carpobrotus edulis*, *Cerastium glomeratum*, *Conicosia pugioniformis*, *Rumex acetosella*, and *Vulpia bromoides*.

Associations in San Mateo County

***Lupinus chamissonis* Association**

Common Name: Dune Lupine Shrubland

Alliance: *Lupinus chamissonis – Ericameria ericoides* Shrubland Alliance

Local Vegetation Description

The Dune Lupine Association forms an open to intermittent shrub layer. The emergent tree layer is typically absent, and the herbaceous layer is open to intermittent. Dominant and characteristic shrubs include *Lupinus chamissonis*, and those that are often present include *Baccharis pilularis* and *Lupinus arboreus*. The herbaceous layer typically includes *Carpobrotus edulis*, and herbs that are often present include *Abronia latifolia*, *Achillea millefolium*, *Bromus diandrus*, *Bromus maritimus*, *Camissonia cheiranthifolia*, *Chorizanthe cuspidata*, *Claytonia perfoliata*, *Elymus pacificus*, *Erigeron glaucus*, *Eriogonum latifolium*, *Eriophyllum stoechadifolium*, *Eschscholzia californica*, *Galium aparine*, *Marah fabaceus*, *Pterostegia drymariooides*, *Stellaria media*, and *Vulpia bromoides*.

Lupinus chamissonis – Ericameria ericoides Association
Lupinus chamissonis – Ericameria ericoides Shrubland Alliance

***Prunus ilicifolia – Heteromeles arbutifolia – Ceanothus spinosus* Shrubland Alliance**

Common Name: Holly leaf cherry – toyon – greenbark ceanothus chaparral

NVC Alliance Code: A3863. *Prunus ilicifolia - Heteromeles arbutifolia - Ceanothus spinosus* Mesic Chaparral Alliance

Statewide Description

Ceanothus spinosus, *Heteromeles arbutifolia* and/or *Prunus ilicifolia* is dominant or co-dominant in the shrub canopy with *Artemisia californica*, *Ceanothus megacarpus*, *Cercocarpus montanus*, *Clematis lasiantha*, *Diplacus aurantiacus*, *Eriogonum fasciculatum*, *Fraxinus dipetala*, *Keckiella antirrhinoides*, *Keckiella cordifolia*, *Quercus berberidifolia*, *Rhamnus ilicifolia*, *Rhus ovata* and *Salvia mellifera*. Emergent trees may be present at low cover, including *Juglans californica* or *Quercus agrifolia*.

Both *H. arbutifolia* and *P. ilicifolia* are variable in size and growth habit, being low and dense in exposed places, becoming open and rangy, or tree like in protected areas with long intervals between fires. Stands are heterogeneous in mesic chaparral habitats on north-facing slopes. The differences between this and other chaparral types appears to be mostly related to site history, largely time since last fire, fire frequency, and adjacent alliances. In many cases, stands appear to be small fragments in suburban landscapes where fires are rare but human disturbance is high.

Local Vegetation Description

The Holly leaf cherry – toyon – greenbark ceanothus chaparral Alliance forms an intermittent to continuous shrub layer. The emergent tree layer is typically sparse to open, and the herbaceous layer is open to intermittent. Dominant and characteristic shrubs include *Prunus ilicifolia*, *Heteromeles arbutifolia*, and *Toxicodendron diversilobum*, and those that are often present include *Baccharis pilularis* and *Rubus ursinus*. Commonly associated emergent trees at sparse cover include *Quercus agrifolia*. Herbs that are often present include *Clinopodium douglasii*, *Marah fabaceus*, and *Sanicula crassicaulis*, and herbs that are sometimes present include *Aquilegia formosa*, *Claytonia perfoliata*, *Dryopteris arguta*, *Heracleum maximum*, *Scrophularia californica*, and *Thalictrum fendleri*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	0.1	0 – 1	7.5	5 – 10
Hardwood	1.1	0 – 10	7.2	2 – 15
Regenerating or Shubby Tree	0.2	0.0 – 4.0	3.5	2 – 5
Shrub	76.1	45 – 100	3.6	0.5 – 10
Herb	18.6	2 – 65	0.3	0 – 1

Local Membership Rule

Heteromeles arbutifolia, *Prunus ilicifolia*, and/or *Prunus virginiana* dominate or co-dominate in the shrub layer with *Baccharis pilularis*, and/or *Toxicodendron diversilobum*. *Sanicula crassicaulis* and other herbs such as *Clinopodium douglasii* may be present to abundant in the understory.

Local Environmental Description

Elevation: Mean 199 m, Range 102 – 313 m

Aspect: NE (3), NW (2), SE (2), SW (2)

Slope: Mean 16 degrees, Range 3 – 43 degrees

Macro Topography: Middle 1/3 of slope (3), Lower 1/3 of slope (2), Upper 1/3 of slope (2), Other (1), Wash (channel bed) (1)

Large Rock: Mean 1.0%, Range 0.0 – 6.0%

Small Rock: Mean 3.3%, Range 0.0 – 10.0%

Fines Cover: Mean 20.7%, Range 0.2 – 45%

Litter Cover: Mean 25.2%, Range 0.0 – 97%

Soil Texture (field assessed): Medium to very fine, sandy loam (5), Moderately fine sandy clay loam (1), Coarse, loamy sand (1), Medium silt (1), Moderately coarse, sandy loam (1)

Geology (field or map data): Volcanic and metavolcanic rocks (10), Franciscan melange (10), Sandstone and other sedimentary (3), Greenstone (1), Shale and other sedimentary (1)

San Mateo County Watersheds: San Mateo Bayside (20), Half Moon Bay (4), Palo Alto (1)

Site Impacts

This alliance has low non-native plant cover (average 2.7%) relative to native cover. Non-native species that occur with highest frequency and abundance include *Capsella bursa-pastoris*, *Carduus pycnocephalus*, and *Conium maculatum*.

Associations in San Mateo County

- *Prunus ilicifolia* ssp. *Illicifolia* – *Heteromeles arbutifolia*
- *Prunus ilicifolia* ssp. *Illicifolia* / *Sanicula crassicaulis*

Classification Comments

Transitional stands of *Prunus virginiana* may occur very infrequently and they are associated with this alliance of northerly mesic slope stands.

***Prunus ilicifolia* ssp. *Ilicifolia* – *Heteromeles arbutifolia* Association**

Common Name: Holly Leaf Cherry – Toyon Shrubland

Alliance: *Prunus ilicifolia* – *Heteromeles arbutifolia* – *Ceanothus spinosus* Shrubland Alliance

Local Vegetation Description

The Holly Leaf Cherry – Toyon Association forms an intermittent to continuous shrub layer. The emergent tree layer is typically sparse to open, and the herbaceous layer is open to intermittent. Dominant and characteristic shrubs include *Heteromeles arbutifolia*, *Prunus ilicifolia*, and *Toxicodendron diversilobum*, and those that are often present include *Baccharis pilularis*, *Lonicera hispidula*, and *Rubus ursinus*.

Commonly associated emergent trees at sparse cover include *Quercus agrifolia* and *Umbellularia californica*. The herbaceous layer that are often present include *Clinopodium douglasii* and *Dryopteris arguta*, and herbs that are sometimes present include *Heracleum maximum*, *Marah fabaceus*, and *Sanicula crassicaulis*.

***Quercus durata* Shrubland Alliance**

Common Name: Leather oak chaparral

NVC Alliance Code: A3862. *Quercus durata* Ultramafic Chaparral Alliance

Statewide Description

Quercus durata is dominant, co-dominant, or characteristic in the shrub canopy with *Adenostoma fasciculatum*, *Arctostaphylos glandulosa*, *Arctostaphylos glauca*, *Arctostaphylos pungens*, *Arctostaphylos viscida*, *Ceanothus jepsonii*, *Cercocarpus montanus*, *Eriodictyon californicum*, *Fremontodendron californicum*, *Garrya congdonii*, *Heteromeles arbutifolia*, *Quercus berberidifolia*, *Quercus wislizeni*, and *Umbellularia californica*. Emergent trees may be present at low cover, including *Hesperocyparis macnabiana*, *Hesperocyparis sargentii*, *Juniperus californica*, *Pinus attenuata*, or *Pinus sabiniana*.

Stands of this alliance have high fidelity to serpentine or other ultramafic substrates (Alexander et al. 2007, Kruckeberg 1984), typically occupying mesic sites, including north-facing slopes. *Quercus durata* includes two varieties: var. *durata* and var. *gabrielensis*. This alliance mainly describes *Quercus durata* var. *durata*, which grows on serpentine substrates in the Coastal Ranges and the foothills of the Sierra Nevada. The southern variety, *Q. durata* var. *gabrielensis*, occupies barren gneiss-derived soils in the San Gabriel Mountains.

Local Vegetation Description

Quercus durata Shrubland Alliance

The Leather oak chaparral Alliance forms an open to continuous shrub layer. The emergent tree layer is typically sparse to open, and the herbaceous layer is open. Dominant and characteristic shrubs include *Quercus durata*, *Adenostoma fasciculatum*, *Frangula californica*, *Heteromeles arbutifolia*, and *Toxicodendron diversilobum*. Commonly associated emergent trees at sparse cover include *Quercus agrifolia* and *Umbellularia californica*. The herbaceous layer typically includes *Chlorogalum pomeridianum*, and herbs that are often present include *Achillea millefolium*, *Lomatium dasycarpum*, and *Marah fabaceus*. Commonly associated non-vascular plants include Lichen and Moss.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	0.0	0 – 0	no data	no data
Hardwood	2.2	0 – 6	6.2	2 – 10
Regenerating or Shrubby Tree	0.0	0.0 – 0.2	2.5	1 – 5
Shrub	49.6	23.0 – 75.0	2.3	1 – 5
Herb	11.8	5 – 22	0.3	0 – 0.5

Local Membership Rule

Quercus durata dominates or co-dominates with *Adenostoma fasciculatum* on ultramafic soils.

Heteromeles arbutifolia and/or *Umbellularia californica* are often present in stands.

Local Environmental Description

Elevation: Mean 182 m, Range 130 – 227 m

Aspect: SW (2), NE (2), NW (1)

Slope: Mean 5.4 degrees, Range 2 – 15 degrees

Macro Topography: Middle 1/3 of slope (2), Ridge top (2), Upper 1/3 of slope (1)

Large Rock: Mean 2.6%, Range 0.0 – 6.0%

Small Rock: Mean 9.8%, Range 1.0 – 25.0%

Fines Cover: Mean 27.0%, Range 0.0 – 55.0%

Litter Cover: Mean 58.0%, Range 30.0 – 97%

Soil Texture (field assessed): Moderately fine clay loam (2), Fine silty clay (1), Medium silt loam (1), Medium to very fine, sandy loam (1)

Geology (field or map data): Serpentine (5)

San Mateo County Watersheds: Palo Alto (3), San Mateo Bayside (2)

Site Impacts

This alliance has very low non-native plant cover (average 0.1%) relative to native cover. Non-native species that occur with highest frequency and abundance include *Anagallis arvensis* and *Daucus carota*.

***Quercus durata – Adenostoma fasciculatum* Provisional Association**

Common Name: Leather Oak – Chamise Shrubland

Alliance: *Quercus durata* Shrubland Alliance

Local Vegetation Description

The Leather Oak – Chamise Association forms an intermittent to continuous shrub layer. The emergent tree layer is typically sparse, and the herbaceous layer is open. Dominant and characteristic shrubs include *Adenostoma fasciculatum*, *Frangula californica*, *Quercus durata*, *Heteromeles arbutifolia*, and *Toxicodendron diversilobum*, and those that are often present include *Ceanothus cuneatus*. Commonly associated emergent trees at sparse cover include *Quercus agrifolia*. The herbaceous layer typically includes *Chlorogalum pomeridianum*, and herbs that are often present include *Achillea millefolium*, *Lomatium dasycarpum*, *Claytonia perfoliata*, and *Scrophularia californica*. Commonly associated non-vascular plants include Lichen and Moss.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	0.0	0 – 0	no data	no data
Hardwood	0.5	0 – 1	7.5	5 – 10
Regenerating or Shubby Tree	0.1	0 – 0.2	3.5	2 – 5
Shrub	60.0	50.0 – 75.0	2.2	1 – 5
Herb	10.0	5 – 20	0.3	0 – 0.5

Local Environmental Description

Elevation: Mean 176 m, Range 130 – 227 m

Aspect: SW (2), NW (1)

Slope: Mean 7 degrees, Range 3 – 15 degrees

Macro Topography: Middle 1/3 of slope (2), Upper 1/3 of slope (1)

Large Rock: Mean 4.1%, Range 1 – 6%

Small Rock: Mean 15.7%, Range 7 – 25%

Fines Cover: Mean 45.0%, Range 35 – 55%

Litter Cover: Mean 32.7%, Range 30 – 35%

Soil Texture (field assessed): Moderately fine clay loam (2), Medium to very fine, sandy loam (1)

Geology (field or map data): Serpentine (3)

San Mateo County Watersheds: San Mateo Bayside (2), Palo Alto (1)

Site Impacts

This association has very low non-native plant cover (average 0.2%) relative to native cover. Non-native species that occur with highest frequency and abundance include

Quercus durata – Adenostoma fasciculatum Provisional Association

Quercus durata Shrubland Alliance

Anagallis arvensis, *Daucus carota*, and *Galium aparine*.

Classification Comments

This association is considered provisional since it is under-sampled in its expected range.

***Rubus spectabilis* – *Morella californica* Shrubland Alliance**

Common Name: Salmonberry – Wax myrtlescrub

NVC Alliance Code: A2609. *Rubus spectabilis* Wet Shrubland Alliance

Statewide Description

Sawyer et al. (2009) treated *Morella californica* in a separate alliance, and *Rubus spectabilis* was considered more broadly within the mixed *Rubus (parviflorus, spectabilis, ursinus)* Alliance. Recently, the peer review panel of the NVC has determined that these species should be merged into a single alliance due to similar ecological conditions and overlapping species. Thus, *Morella* and *Rubus spectabilis* are now considered together in a single alliance. The treatment below incorporates these new changes.

Morella californica and/or *Rubus spectabilis* dominate or form various mixtures in the shrub canopy with *Baccharis pilularis*, *Garrya elliptica*, *Gaultheria shallon*, *Holodiscus discolor*, *Lonicera involucrata*, *Marah fabaceus*, *Ribes sanguineum*, *Rubus parviflorus*, *Rubus ursinus*, *Sambucus racemosa*, *Toxicodendron diversilobum*, and *Vaccinium ovatum*. Emergent trees may be present at low cover, including *Picea sitchensis* or *Pinus contorta* ssp. *contorta*.

Morella californica and/or *Rubus spectabilis* stands are generally small (< 1 ha) and close to the coast on moist or wet soils with high water tables. Stands scattered in ravines of San Mateo Co., at Point Reyes National Seashore (Keeler-Wolf et al. 2003a), at Bodega Bay and other Sonoma County coastal settings, and in the Lanphere Dunes unit of

Humboldt Bay Refuge characterize the alliance.

Rubus spectabilis and *R. parviflorus* have similar environmental requirements along the coast of northern California. Both tend to occupy swales, moist bluffs, seeps, or riparian borders along with other cold- deciduous shrubs such as *Lonicera involucrata* ssp. *ledebourii*. All stands dominated or co-dominated by these species are considered part of this alliance.

Local Vegetation Description

The Salmonberry – Wax myrtlescrub Alliance forms a continuous shrub layer. The emergent tree layer is typically absent, and the herbaceous layer is sparse to intermittent. Dominant and characteristic shrubs include *Rubus ursinus* and *Toxicodendron diversilobum*, and those that are often present include *Baccharis pilularis*, *Frangula californica*, *Morella californica*, and *Sambucus racemosa*. Herbs that are often present include *Polystichum munitum*, *Pteridium aquilinum*, and *Scrophularia californica*, and herbs that are sometimes present include *Juncus patens*, *Marah fabaceus*, *Marah oreganus*, *Sanicula laciniata*, *Symphyotrichum chilense*, and *Urtica dioica*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	0.0	0 – 0.2	12.5	10 – 15
Hardwood	0.0	0 – 0	no data	no data
Regenerating or Shrubby Tree	0.0	0 – 0	no data	no data
Shrub	86.2	75 – 96	3.5	1 – 10
Herb	10.2	1 – 40	0.5	0 – 1

Local Membership Rule

Vegetation dominated or co-dominated by *Morella californica* and/or *Rubus spectabilis*, or sometimes *Sambucus racemosa* dominates in the shrub overstory. Stands may be small and are generally found close to the coast on moist or wet soils, ravines, and riparian areas. *Sambucus racemosa* stands often preferring riparian streams, seeps along slopes, and moist post-fire slopes where there was past disturbance.

Local Environmental Description

Elevation: Mean 233 m, Range 13 – 476 m

Aspect: NE (4), NW (1), SW (1)

Slope: Mean 13 degrees, Range 8 – 20 degrees

Macro Topography: Middle 1/3 of slope (2), Lower to Middle 1/3 of slope (1), Upper 1/3 of slope (1)

Large Rock: 0.0%

Small Rock: Mean 0.5%, Range 0.0 – 3.0%

Fines Cover: Mean 11.4%, Range 0.2 – 33.0%

Litter Cover: Mean 81.7%, Range 60.0 – 95%

Soil Texture (field assessed): Medium to very fine, sandy loam (1), Muck (1), Medium

loam (1), Fine sandy clay (1)

Geology (field or map data): Sandstone, shale, and conglomerate (2), Granitic (1), Metamorphic (type unknown) (1), Volcanic and metavolcanic rocks (1)

San Mateo County Watersheds: Ano Nuevo (1), Half Moon Bay (1), Pescadero Creek (1), San Francisco Coastal (1), San Mateo Bayside (1)

Site Impacts

This alliance has very low non-native plant cover (average 0.1%) relative to native cover. Non-native species that occur with highest frequency and abundance include *Arum italicum* and *Geranium dissectum*.

Sambucus racemosa – (*Rubus ursinus*) Provisional Association
Rubus spectabilis – *Morella californica* Shrubland Alliance

***Salix exigua* Shrubland Alliance**

Common Name: Sandbar willow thickets

NVC Alliance Code: A0947. *Salix exigua* Warm Desert Wet Shrubland Alliance

Statewide Description

Salix exigua is dominant or co-dominant in the shrub canopy with *Baccharis* spp., *Brickellia californica*, *Rosa californica*, *Rubus armeniacus*, *Rubus ursinus*, *Salix lasiolepis*, and *Salix melanopsis*. Emergent trees of many different species may be present at low cover.

The *Salix exigua* Alliance is widespread and common throughout California, especially along seasonally or temporarily flowing streams and at seeps. It often forms dense, clonal stands. Great regional variation exists in shrub and understory composition, ranging from Sierran mountain meadow species to those found in Colorado Desert oases. Along the Sacramento River and elsewhere in the Central Valley, *Salix exigua* are the first shrubs to colonize point bars and cut banks, followed in time by *Populus fremontii* and other tall, longer-lived species (Sands 1980). Rivers with flood-control dams in place may have reduced acreage of *Salix exigua* stands with increases in stands of longer-lived tree willows such as *S. gooddingii*, *S. laevigata*, and *S. lucida*.

Local Vegetation Description

The Sandbar willow thickets Alliance forms an intermittent to continuous shrub layer. The emergent tree layer is typically sparse, and the herbaceous layer is open. Dominant and characteristic shrubs include *Salix exigua* and *Rubus ursinus*. Regenerating or shrubby trees that are often present include *Acer negundo*. The herbaceous layer typically includes *Helenium puberulum* and *Polygonum punctatum*, and herbs that are often present include *Artemisia douglasiana*, *Centaurea muehlenbergii*, *Cirsium vulgare*, *Epipactis helleborine*, *Pseudognaphalium luteoalbum*, and *Sonchus asper*.

Commonly associated non-vascular plants include Lichen and Moss.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	0.0	0 – 0	no data	no data
Hardwood	0.1	0 – 0.2	10.8	5 – 20
Regenerating or Shrubby Tree	0.1	0 – 0.2	8.0	2 – 15
Shrub	61.8	42 – 75	0.5	0 – 1
Herb	9.3	5 – 15	0.9	0 – 2

Local Membership Rule

Salix exigua dominates along rivers and streams, or close to springs. They are often the first plants to colonize bars and cut banks, followed later by trees such as *Acer* and *Salix* spp.

Local Environmental Description

Elevation: Mean 76 m, Range 40 – 107 m

Aspect: SE (3), NE (1)

Slope: Mean 4 degrees, Range 2 – 6 degrees

Macro Topography: Bottom (2), Bottom to Lower 1/3 of slope (2)

Large Rock: Mean 0.0%, Range 0.0 – 0.0%

Small Rock: Mean 1.3%, Range 0.0 – 5.0%

Fines Cover: Mean 37.0%, Range 3.0 – 87.0%

Litter Cover: Mean 57.8%, Range 6.0 – 95%

Soil Texture (field assessed): Medium silt (1), Moderately fine clay loam (1), Sand, (class unknown) (1), Coarse, loamy sand (1)

Geology (field or map data): Franciscan melange (2), Sandy alluvium (most alluvial fans and washes) (1), Silty alluvium (1)

San Mateo County Watersheds: Palo Alto (1), San Mateo Bayside (1)

Other Watersheds, Marin Co.: Novato (1), Walker Creek (1)

Site Impacts

This alliance has low non-native plant cover (average 4.3%) relative to native cover. Non-native species that occur with highest frequency and abundance include *Aira caryophyllea*, *Amaranthus deflexus*, *Anagallis arvensis*, *Carduus pycnocephalus*, *Cirsium vulgare*, *Conium maculatum*, *Cynodon dactylon*, *Dittrichia graveolens*, *Epipactis helleborine*, *Euphorbia peplus*, *Hirschfeldia incana*, *Leontodon taraxacoides*, *Lythrum tribracteatum*, *Plantago major*, *Polypogon monspeliensis*, *Pseudognaphalium luteoalbum*, *Rumex crispus*, *Rumex pulcher*, *Solanum nigrum*, *Soleirolia soleirolii*, *Sonchus asper*, and *Stellaria media*.

Associations in San Mateo County

***Salix hookeriana* – *Salix sitchensis* – *Spiraea douglasii* Shrubland Alliance**

Common Name: Coastal dune willow – Sitka willow – Douglas spiraea thickets

NVC Alliance Code: A3835. *Salix hookeriana* - *Salix sitchensis* - *Spiraea douglasii*
Wet Shrubland Alliance

Statewide Description

Sawyer et al. (2009) treated *Salix hookeriana* and *S. sitchensis* in separate alliances, but the peer review panel of the NVC have recently placed them together in a merged alliance because of ecological similarity. *Salix hookeriana* and/or *S. sitchensis* is dominant or co-dominant in the tall shrub or low tree canopy with *Baccharis pilularis*, *Cornus sericea*, *Morella californica*, *Rubus* spp., and *Salix lasiolepis*. As a shrubland, emergent trees may be present at low cover, including *Alnus rubra*, *Picea sitchensis*, *Populus trichocarpa*, or *Salix lucida*.

Salix sitchensis and *S. hookeriana* range from Alaska to California. These species are ecologically and morphologically similar. They both form moisture-loving, disturbance-related stands. It is the major willow scrub along the moist, northwestern coastal belt of California. It commonly occurs in road banks and along shores of creeks, rivers, lagoons, and dune hollows along the North Coast of California. So far, most willow stands observed in this region are dominated by *S. hookeriana*, though *S. sitchensis* dominant to exist especially further south in the Central Coast of the alliance's range.

Local Vegetation Description

The Coastal dune willow – Sitka willow – Douglas spiraea thickets Alliance forms a continuous shrub layer in the single sample available. The emergent tree layer is typically sparse, and the herbaceous layer is open. Dominant and characteristic shrubs include *Salix sitchensis*, *Baccharis pilularis*, *Cornus sericea*, *Frangula californica*, *Rubus armeniacus*, *Rubus parviflorus*, *Rubus ursinus*, and *Salix lasiolepis*. The herbaceous layer typically includes *Delairea odorata*, *Artemisia douglasiana*, *Conium maculatum*, *Cortaderia jubata*, *Crassula multicava*, *Dryopteris arguta*, *Galium aparine*, *Geranium dissectum*, *Picris echioides*, *Scirpus microcarpus*, *Scrophularia californica*, and *Symphytum chilense*. Commonly associated non-vascular plants include Lichen and Moss.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	0.0	NA	no data	no data
Hardwood	0.0	NA	no data	no data
Regenerating or Shrubby Tree	0.0	NA	no data	no data
Shrub	75.0	NA	3.5	2 – 5
Herb	10.0	NA	0.3	0 – 0.5

Local Membership Rule

Salix sitchensis dominates or co-dominates with *S. lasiolepis* along coastal or low elevation streams, lagoons. A variety of sub-dominant trees and shrubs may be present, including *Alnus*, *Morella*, and *Rubus*.

Local Environmental Description

Elevation: 10 m

Aspect: Flat (1)

Slope: 0 degrees

Macro Topography: Bottom (1)

Large Rock: 0.0%

Small Rock: 5.0%

Fines Cover: 50.0%

Litter Cover: 42%

Soil Texture (field assessed): Unknown (1)

Geology (field or map data): Alluvium (1)

San Mateo County Watersheds: Pacifica (1)

Site Impacts

This alliance has low non-native plant cover (average 15.5%) relative to native cover. Non-native species that occur with highest frequency and abundance include *Conium maculatum*, *Cortaderia jubata*, *Crassula multicava*, *Delairea odorata*, *Geranium dissectum*, *Picris echioides*, and *Rubus armeniacus*.

***Salix sitchensis* Provisional Association**

Common Name: Sitka willow Shrubland

Alliance: *Salix hookeriana* – *Salix sitchensis* – *Spiraea douglasii* Shrubland Alliance

Classification Comments

The association circumscription is the same as that of the alliance for the county. See above for detailed description. This association is considered provisional since it is undersampled in its expected range.

Global Rarity Rank: GNR **State Rarity Rank:** SNR **State Rare:** Y

***Salix lasiolepis* Shrubland Alliance**

Common Name: Arroyo willow thickets

NVC Alliance Code: A3878. *Salix lasiolepis* Warm Desert Wet Shrubland Alliance

Statewide Description

Salix lasiolepis is dominant or co-dominant in the tall shrub or low tree canopy with *Acer macrophyllum*, *Baccharis pilularis*, *Baccharis salicifolia*, *Cephalanthus occidentalis*, *Cornus sericea*, *Morella californica*, *Platanus racemosa*, *Populus fremontii*, *Populus trichocarpa*, *Salix* spp., and *Sambucus nigra*. Emergent trees may be present at low cover.

Salix lasiolepis grows on seasonally or intermittently flooded riparian sites. Some plants in California stands are sufficiently tall to be considered trees. Plants are typically shrubby and multi-branched along coastal creeks, at lower and middle elevations, and in parts of the Sacramento–San Joaquin River delta. Some taxonomists recognize varieties: *Salix lasiolepis* var. *bigelovii* is a coastal plant, and *S. lasiolepis* var. *lasiolepis* grows throughout the state (Argus 1997). Disturbances during winter floods modify stands; timing of seed dispersal and spring flood patterns determine seedling success.

Local Vegetation Description

The Arroyo willow thickets Alliance forms an intermittent to continuous shrub layer. The emergent tree layer is typically sparse to open, and the herbaceous layer is sparse to intermittent. Dominant and characteristic shrubs include *Salix lasiolepis* and *Rubus*

ursinus, and those that are often present include *Toxicodendron diversilobum*. Herbs that are sometimes present include *Clinopodium douglasii*, *Conium maculatum*, *Heracleum maximum*, *Polystichum munitum*, *Sanicula crassicaulis*, *Scrophularia californica*, *Stachys ajugoides*, and *Urtica dioica*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	0.8	0 – 15	12.5	10 – 15
Hardwood	2.3	0 – 20	5.0	2 – 15
Regenerating or Shrubby Tree	0.5	0 – 10	4.9	1 – 15
Shrub	81.9	41 – 100	3.3	0.5 – 15
Herb	10.6	0 – 50	0.8	0 – 5

Local Membership Rule

Salix lasiolepis dominates or co-dominates with *Rubus* along stream banks and benches, slope seeps, and drainage stringers. Emergent riparian trees are often present, such as *Acer*, *Alnus*, *Fraxinus*, *Salix*, and others.

Local Environmental Description

Elevation: Mean 135 m, Range 11 – 375 m

Aspect: SE (3), SW (3), Flat (3), NW (1), NE (1), Variable (1)

Slope: Mean 5 degrees, Range 0 – 25 degrees

Macro Topography: Bottom (4), Wash (channel bed) (2), Middle 1/3 of slope (1), Bottom to Lower 1/3 of slope (1), Upper 1/3 of slope (1), Draw (1), Lower 1/3 of slope (1), Lower to Middle 1/3 of slope (1)

Large Rock: Mean 0.5%, Range 0.0 – 6.0%

Small Rock: Mean 0.7%, Range 0.0 – 5.0%

Fines Cover: Mean 14.8%, Range 3.0 – 56%

Litter Cover: Mean 56.8%, Range 0.0 – 95%

Salix lasiolepis – *Rubus* spp. Association
Salix lasiolepis Shrubland Alliance

***Salix lasiolepis – Salix lucida* Association**

Common Name: Arroyo Willow – Shining Willow Shrubland

Alliance: *Salix lasiolepis* Shrubland Alliance

Local Vegetation Description

The Arroyo Willow – Shining Willow Association forms an absent shrub layer. The emergent tree layer is sparse, and the herbaceous layer is open. The dominant shrub is *Salix lasiolepis*. *Salix lasiandra* (= *S. lucida*) is subdominant at a similar level in the canopy. Other characteristic shrubs include *Rubus ursinus* and *Toxicodendron diversilobum*. Commonly associated emergent trees at sparse cover include *Umbellularia californica*. The herbaceous layer typically includes *Pteridium aquilinum*, and herbs that are often present include *Carex obnupta* and *Heracleum maximum*.

Toxicodendron diversilobum Shrubland Alliance

Common Name: Poison oak scrub

NVC Alliance Code: A2610. *Toxicodendron diversilobum* Scrub Alliance

Statewide Description

Toxicodendron diversilobum is dominant in the shrub canopy with *Artemisia californica*, *Baccharis pilularis*, *Diplacus aurantiacus*, *Heteromeles arbutifolia*, *Keckiella cordifolia*, *Malosma laurina*, *Philadelphus lewisii*, *Rhamnus ilicifolia*, *Rubus parviflorus*, *Salvia leucophylla*, *Salvia mellifera*, and *Sambucus nigra*. Emergent trees may be present at low cover, including *Juglans californica* or *Quercus agrifolia*.

Sampling in this alliance requires care. Nonetheless, people have sampled it in a variety of settings in southern and central California, from the immediate coastline to dry inland foothills of the Sierra Nevada. Some coastal stands are nearly pure, persistent, and have relatively low diversity. However, some stands are likely to be a consequence of past and frequent fire disturbance, and these can have a high diversity of native herbs and emergent trees. *Toxicodendron diversilobum* grows throughout cismontane California and is found in many low-elevation alliances.

Local Vegetation Description

The Poison oak scrub Alliance forms an open to continuous shrub layer. The emergent tree layer is typically sparse to open, and the herbaceous layer is sparse to continuous. Dominant and characteristic shrubs include *Toxicodendron diversilobum*, *Baccharis*

pilularis, and *Rubus ursinus*. Herbs that are sometimes present include *Carduus pycnocephalus*, *Clinopodium douglasii*, *Conium maculatum*, *Dryopteris arguta*, *Eriophyllum stoechadifolium*, *Heracleum maximum*, *Marah fabaceus*, *Sanicula crassicaulis*, *Scrophularia californica*, and *Urtica dioica*.

Herb	14.8	0 – 85	1.0	0 – 5

Local Membership Rule

Toxicodendron diversilobum dominates, sometimes intermixing with sub-dominant *Baccharis pilularis* and *Rubus* spp. If *B. pilularis* is present and greater than 50% relative cover, key to the *Baccharis pilularis* Alliance. For this project, stands were encountered close to the coast, although they are likely to occur inland as well.

Local Environmental Description

Elevation: Mean 222 m, Range 11 – 548 m

Aspect: SW (5), NE (5), SE (2)

Slope: Mean 19 degrees, Range 3 – 40 degrees

Macro Topography: Upper 1/3 of slope (3), Upper 1/3 of slope to Ridgetop (2), Lower 1/3 of slope (2), Middle 1/3 of slope (1), Middle to Upper 1/3 of slope (1), Lower to Upper 1/3 of slope (1), Bench (1), Terrace (former shoreline or floodplain) (1)

Large Rock: Mean 1.7%, Range 0.0 – 19.0%

Small Rock: Mean 4.0%, Range 0.0 – 22.0%

Fines Cover: Mean 32.9%, Range 4 – 61.7%

Litter Cover: Mean 41.5%, Range 0.0 – 90%

Soil Texture (field assessed): Medium to very fine, sandy loam (2), Not recorded (2), Moderately coarse, sandy loam (2), Loam, (class unknown) (1), Coarse, loamy sand (1), Moderately fine clay loam (1), Sand, (class unknown) (1), Unknown (1), Medium silt loam (1)

Geology (field or map data): Sandstone and other sedimentary (9), Franciscan melange (6), Volcanic and metavolcanic rocks (3), Sandstone, shale, and conglomerate (2), Sandstone (2), Granitic (2), Metamorphic (type unknown) (1), Greenstone (1), Granitic (generic) (1), Mixed metamorphic (1)

Toxicodendron diversilobum Shrubland Alliance

Dryopteris arguta 20.7 2.9 0.1 0.2 1

Toxicodendron diversilobum – (*Baccharis pilularis*) Association

Common Name: Poison-oak – (Coyote Brush) Shrubland

Alliance: *Toxicodendron diversilobum* Shrubland Alliance

Classification Comments

This association has been revised to include the previously accepted *Toxicodendron diversilobum – Baccharis pilularis – Rubus parviflorus* Association from Point Reyes (Keeler-Wolf et al. 2003a). The association circumscription is the same as that of the alliance for the county. See above for detailed description.

HERBACEOUS VEGETATION

Abronia latifolia – Ambrosia chamissonis Herbaceous Alliance

Common Name: Dune mat

NVC Alliance Code: A1614. *Abronia latifolia - Ambrosia chamissonis* Dune Grassland Alliance

Statewide Description

Abronia latifolia and/or *Ambrosia chamissonis* mix with other perennial herbs, grasses, and low shrubs to form a low canopy with *Abronia maritima*, *Abronia umbellata*, *Achillea millefolium*, *Artemisia pycnocephala*, *Atriplex* spp., *Cakile maritima*, *Calystegia macrostegia*, *Calystegia soldanella*, *Camissonia cheiranthifolia*, *Cardionema ramosissimum*, *Carpobrotus* spp., *Croton californicus*, *Erigeron glaucus*, *Eriogonum latifolium*, *Eriogonum parvifolium*, *Eriophyllum staechadifolium*, *Erysimum* spp., *Fragaria chiloensis*, *Grindelia stricta*, *Lathyrus littoralis*, *Malacothrix incana*, and *Poa douglasii*. Emergent shrubs may be present at low cover, including *Baccharis pilularis*, *Ericameria ericoides*, *Lupinus arboreus*, or *Lupinus chamissonis*.

Plants of the Dune Mat are well adapted to shifts both temporally and spatially as a result of variable environmental conditions. In some areas, local mound-by-mound dominance of *Abronia latifolia*, *Ambrosia chamissonis*, *Poa douglasii*, and other species suggests fine-scale microsite patterning; however, the scale of disturbance and the

clonal mat-forming characteristics of many of the major species suggest that stands should be considered on a larger spatial scale. For these reasons, this alliance is presented broadly and variation is described at the association level.

Local Vegetation Description

The Dune mat Alliance forms an open to continuous herbaceous layer. The shrub layer is sparse to absent and the tree layer is absent. Characteristic herbs include *Ambrosia chamissonis* and *Cakile maritima*. Those herbs often present include *Abronia latifolia*, *Artemisia pycnocephala*, *Calystegia soldanella*, *Carpobrotus edulis*, and *Distichlis spicata*, and herbs that are sometimes present include *Ammophila arenaria*, *Bromus diandrus*, *Camissonia cheiranthifolia*, *Heliotropium curassavicum*, *Lathyrus littoralis*, *Pseudognaphalium stramineum*, *Senecio* spp., *Sonchus oleraceus*, *Tanacetum camphoratum*, and *Tetragonia tetragonoides*.

***Ammophila arenaria* Herbaceous Semi-Natural Alliance**

Common Name: European beach grass swards

NVC Alliance Code: A2061. *Ammophila arenaria* Coastal Dunegrass Ruderal Grassland Alliance

Statewide Description

Ammophila arenaria is dominant in the herbaceous layer. Emergent shrubs may be present at low cover, including *Baccharis pilularis* or *Lupinus arboreus*.

Ammophila arenaria is now the predominant vegetation type in many dune systems along the Pacific coast from Ventura County to British Columbia. Many habitat changes occur with its presence: dune stabilization, alteration of dune morphology, reduction in native stands of the *Abronia latifolia* – *Ambrosia chamissonis*, *Leymus mollis*, and other alliances, and a reduction in habitat for both rare animals (e.g., snowy plover, *Charadrius alexandrinus*) and rare plants (e.g., *Erysimum menziesii* ssp. *eurekense* and *Layia carnosa*, both listed as California rare plants with a rank of 1B.1).

Local Vegetation Description

The European beach grass swards Alliance forms an intermittent to continuous herbaceous layer. The shrub layer is open and the tree layer is sparse or absent. Dominant herbs include *Ammophila arenaria*. Those herbs often present include *Carpobrotus edulis*, and herbs that are sometimes present include *Achillea millefolium*, *Camissonia cheiranthifolia*, *Galium aparine*, *Hypochaeris radicata*, *Pseudognaphalium*

spp., *Pterostegia drymariooides*, and *Sonchus asper*. Commonly associated emergent shrubs at low cover include *Baccharis pilularis* and *Lupinus arboreus*.

***Ammophila arenaria* Semi-natural Association**

Common Name: Beachgrass Patches

Alliance: *Ammophila arenaria* Herbaceous Semi-Natural Alliance

Local Vegetation Description

The Beachgrass Association forms an intermittent herbaceous layer. The shrub layer is open and the tree layer is usually absent. Dominant herbs include *Ammophila arenaria*. Those herbs often present include *Carpobrotus edulis*, and herbs that are sometimes present include *Achillea millefolium*, *Camissonia cheiranthifolia*, *Galium aparine*, *Hypochaeris radicata*, *Pseudognaphalium*, *Pterostegia drymarioides*, and *Sonchus asper*. Commonly associated emergent shrubs at sparse cover include *Baccharis pilularis* and *Lupinus arboreus*.

Ammophila arenaria Semi-natural Association
Ammophila arenaria Herbaceous Semi-Natural Alliance

***Atriplex prostrata* – *Cotula coronopifolia* Herbaceous Semi-Natural Alliance**

Common Name: Fields of fat hen and brass buttons

NVC Alliance Code: N/A.

Statewide Description

Atriplex prostrata and/or *Cotula coronopifolia* is dominant or co-dominant in the herbaceous layer.

Both species are indicative of disturbed conditions in alkaline or saline wetlands. Both are early seral plants; they may be abundant to sparse from year to year depending on disturbance regime and salinity. Thus, we place them into this one vegetation type which constitutes an ephemeral, seasonally flooded marsh type at intermediate tidal elevations with relatively high salinities (Keeler-Wolf and Vaghti 2000, Pickart 2006). Stands occur usually in relatively narrow bands along the upper margins of brackish or salt marshes, and sometimes as extensive monocultures (Pickart 2006). Ecologically, the most closely related native types may be the *Distichlis spicata* and *Frankenia salina* alliances. As a result of flooding, stands of the *Typha (angustifolia, domingensis, latifolia)* alliance and other freshwater plants may occur adjacent to or replace them.

Local Vegetation Description

The Fields of fat hen and brass buttons Alliance forms an open herbaceous layer in the single survey available. The shrub layer is absent and the tree layer is absent.

Dominant herbs include *Atriplex prostrata*, and characteristic herbs include *Bolboschoenus maritimus* and *Sarcocornia pacifica*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	0.0	NA	no data	no data

Avena spp. – Bromus spp. Herbaceous Semi-Natural Alliance

Common Name: Wild oats and annual brome grasslands

NVC Alliance Code: A3870. *Avena fatua - Bromus spp.* Ruderal Annual Grassland Alliance

Statewide Description

Avena barbata, *Avena fatua*, *Brachypodium distachyon*, *Bromus diandrus*, and/or *Bromus hordeaceus* dominate or co-dominate in the herbaceous layer. Emergent trees and shrubs may be present at low cover.

Until recently, this type was recognized as two separate alliances. However, the yearly shift of species dominance and the overlap of many non-native *Bromus* and *Avena* species suggests a broader, more inclusive treatment. This alliance is identified by high, persistent cover of non-native grasses, but may have high cover of early spring non-native herbs such as *Erodium* spp. as well.

Local Vegetation Description

The Wild oats and annual brome grasslands Alliance forms an open to continuous herbaceous layer. The shrub layer is open and the tree layer is absent. Characteristic herbs include *Bromus diandrus* and *Bromus hordeaceus*. Those herbs often present include *Avena* spp., *Brachypodium distachyon*, *Carduus pycnocephalus*, *Geranium dissectum*, *Hypochaeris radicata*, *Linum bienne*, *Lolium perenne*, *Nassella pulchra*, *Picris echioides*, *Plantago lanceolata*, *Rumex acetosella*, *Sisyrinchium bellum*, *Vicia*

sativa, and *Vulpia bromoides*, and herbs that are sometimes present include *Achillea millefolium*, *Aira caryophyllea*, *Anagallis arvensis*, *Briza minor*, *Bromus carinatus*, *Centaurea melitensis*, *Centaurea solstitialis*, *Chlorogalum pomeridianum*, *Conium maculatum*, *Cynosurus echinatus*, *Danthonia californica*, *Eschscholzia californica*, *Holcus lanatus*, *Hypochaeris glabra*, *Lotus corniculatus*, *Lupinus bicolor*, *Medicago spp.*, *Myosotis discolor*, *Raphanus sativus*, *Sanicula bipinnatifida*, *Sherardia arvensis*, *Sidalcea malviflora*, *Silene gallica*, *Trifolium angustifolium*, *Trifolium hirtum*, and *Vicia tetrasperma*. Commonly associated emergent shrubs at sparse cover include *Baccharis pilularis*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	0.0	0 – 0	no data	no data
Hardwood	0.0	0 – 0	no data	no data
Regenerating or Shrubby Tree	0.0	0 – 0	no data	no data
Shrub	3.5	0 – 7	no data	no data
Herb	65.3	15 – 96	0.3	0 – 0.5

Local Membership Rule

Avena, *Brachypodium*, *Briza*, *Bromus*, *Erodium* and/or *Hypochaeris* dominate individually or in combination. If *Elymus caput-medusae* is co-dominant with *Avena* and/or *Bromus* spp., those stands can also key here. If *Lolium perenne* is co-dominant key to that alliance.

Local Environmental Description

Elevation: Mean 261 m, Range 15 – 730 m

Aspect: SW (3), Flat (1)

Slope: Mean 18 degrees, Range 0 – 32 degrees

Macro Topography: Backslope (cliff) (1), Upper 1/3 of slope (1), Upper 1/3 of slope to Ridgetop (1)

Large Rock: Mean 1.5%, Range 0.0 – 8%

Small Rock: Mean 17.5%, Range 0.0 – 80%

***Brachypodium distachyon* Semi-natural Association**

Common Name: Purple False Brome Patches

Alliance: *Avena* spp. – *Bromus* spp. Herbaceous Semi-Natural Alliance

Local Vegetation Description

The Purple False Brome Association forms a continuous herbaceous layer. The shrub layer is open or absent and the tree layer is sparse or absent. Dominant herbs include *Brachypodium distachyon*, and characteristic herbs include *Avena* spp. Those herbs often present include *Briza maxima*, *Bromus diandrus*, *Carduus pycnocephalus*, *Erodium botrys*, and *Nassella pulchra*, and herbs that are sometimes present include *Anagallis arvensis*, *Bromus carinatus*, *Bromus hordeaceus*, *Cynosurus echinatus*, *Eschscholzia californica*, *Hypochaeris glabra*, *Hypochaeris radicata*, *Lolium perenne*, *Lupinus nanus*, *Melica californica*, *Plantago lanceolata*, *Sanicula bipinnatifida*, and *Trifolium hirtum*.

Local Environmental Description

Elevation: Mean 191 m, Range 15 – 367 m

Aspect: SE (1), SW (1)

Slope: Mean 24 degrees, Range 15 – 32 degrees

Macro Topography: Upper 1/3 of slope (1), Backslope (cliff) (1)

Large Rock: 0.0%

Small Rock: 80.0%

Fines Cover: 0.2%

Litter Cover: Mean 1.6%, Range 0.2 – 3%

Soil Texture (field assessed): Moderately fine sandy clay loam (1)

Geology (field or map data): Sandstone and other sedimentary (1)

San Mateo County Watersheds:

Other Watersheds, Santa Clara Co.: Guadalupe River (1)

Site Impacts

This association has greater cover of exotics (average 95.4%) than natives. Non-native species that occur with highest frequency and abundance include *Anagallis*

arvensis, *Avena* spp., *Brachypodium distachyon*, *Briza maxima*, *Bromus diandrus*, *Bromus hordeaceus*, *Carduus pycnocephalus*, *Cynosurus echinatus*, *Erodium botrys*, *Hypochaeris glabra*, *Hypochaeris radicata*, *Lolium perenne*, *Plantago lanceolata*, and *Trifolium hirtum*.

Classification Comments

Since the number of surveys of this association in San Mateo County are low, data from nearby counties were included.

***Bidens cernua – Euthamia occidentalis – Ludwigia palustris* Herbaceous Provisional Alliance**

Common Name: Nodding beggarticks – western goldentop – marsh seedbox mudflats

NVC Alliance Code: A3850. *Bidens cernua - Euthamia occidentalis - Ludwigia palustris* Intertidal Mudflat Alliance

Statewide Description

Artemisia douglasiana, *Bidens cernua*, *Euthamia occidentalis* and/or *Ludwigia palustris* is dominant or co-dominant in the herbaceous layer with *Amaranthus* spp., *Baccharis douglasii*, *Eleocharis* spp., *Epilobium* spp., *Euphorbia* spp., *Hirschfeldia incana*, *Persicaria hydropiperoides*, *Rumex* spp., *Sagittaria latifolia* or *Urtica dioica*. Emergent trees and shrubs may be present at low cover, including *Rubus ursinus* and *Sambucus nigra*.

This herbaceous alliance is found in the western U.S. and occurs in low-elevation marshes, meadows, and mudflats along low-gradient streams, shallow ponds, and depressional wetlands (NatureServe 2019). It is dominated by a mixture of low-growing herbs, prostrate forbs, drying aquatic plants, and taller perennial herbs. Specifically, these are species that can tolerate early-season flooding and summer drying that expose mudflats with subsurface moisture. Potentially dominant plants include *Amaranthus* spp., *Artemisia douglasiana*, *Bidens cernua*, *Eleocharis* spp., *Euphorbia* spp., *Euthamia occidentalis*, *Ludwigia palustris*, *Persicaria hydropiperoides*, and *Sagittaria latifolia*, though many more species have been recorded.

Local Vegetation Description

The Nodding beggarticks – western goldentop – marsh seedbox mudflats Alliance forms an intermittent to continuous herbaceous layer. The shrub layer is open and the tree layer is absent. Characteristic herbs include *Cirsium vulgare* and *Mentha pulegium*. Those herbs often present include *Baccharis glutinosa*, *Centaurium tenuiflorum*, *Dittrichia graveolens*, *Gnaphalium palustre*, *Helenium puberulum*, *Leontodon taraxacoides*, *Phyla nodiflora*, *Picris echioides*, *Rumex crispus*, and *Sonchus asper*, and herbs that are sometimes present include *Achillea millefolium*, *Carduus pycnocephalus*, *Centaurium muehlenbergii*, *Cicuta douglasii*, *Conyza canadensis*, *Deschampsia cespitosa*, *Epilobium ciliatum*, *Euthamia occidentalis*, *Hoita orbicularis*, *Juncus effusus*, *Juncus patens*, *Juncus phaeocephalus*, *Lythrum hyssopifolium*, *Madia sativa*, *Matricaria discoidea*, *Polygonum hydropiperoides*, *Polygonum punctatum*, *Rumex occidentalis*, *Rumex salicifolius*, *Senecio hydrophilus*, *Solidago velutina*, *Stachys ajugoides*, and *Typha domingensis*. Commonly associated emergent shrubs at sparse cover include *Rubus ursinus*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	0.0	0 – 0	no data	no data
Hardwood	0.0	0 – 0	no data	no data
Regenerating or Shrubby Tree	0.0	0 – 0	no data	no data
Shrub	3.3	0 – 10	0.3	0 – 0.5
Herb	72.5	40 – 100	0.9	0 – 2

Local Membership Rule

Euthamia occidentalis, *Hoita orbicularis*, *Bidens* spp., and/or the native herb *Ludwigia palustris* dominates or co-dominates in wetlands with emergent shrubs such as *Rubus ursinus*. *Baccharis glutinosa* (= *B. douglasii*) is often present.

Local Environmental Description

Elevation: Mean 55 m, Range 11 – 92 m

Aspect: NE (2), SW (1)

Slope: Mean 2 degrees, Range 0 – 3 degrees

Macro Topography: Lower 1/3 of slope (2), Bottom (1)

Large Rock: 0.0%

Small Rock: Mean 0.1%, Range 0.0 – 0.2%

Fines Cover: Mean 66.0%, Range 5.0 – 97%

***Euthamia occidentalis* Provisional Association**

Common Name: Western Goldentop Mudflats Patches

Alliance: *Bidens cernua – Euthamia occidentalis – Ludwigia palustris* Herbaceous Alliance

Local Vegetation Description

The Western Goldentop Mudflats Association forms a continuous herbaceous layer in the single survey available. The shrub layer is open and the tree layer is absent.

Dominant herbs include *Euthamia occidentalis*, and characteristic herbs include *Baccharis glutinosa*, *Centaurium muehlenbergii*, *Helenium puberulum*, and *Rumex occidentalis*. Commonly associated emergent shrubs at sparse cover include *Rubus ursinus*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range

***Bolboschoenus maritimus* Herbaceous Alliance**

Common Name: Salt marsh bulrush marshes

NVC Alliance Code: A3895. *Schoenoplectus americanus* - *Schoenoplectus acutus* - *Schoenoplectus californicus* Marsh Alliance

Statewide Description

Bolboschoenus maritimus is dominant or co-dominant in the herbaceous layer with *Agrostis stolonifera*, *Argentina egedii*, *Atriplex prostrata*, *Bolboschoenus robustus*, *Chenopodium foliosum*, *Cotula coronopifolia*, *Distichlis spicata*, *Eleocharis macrostachya*, *Lemna minuta*, *Sarcocornia pacifica*, *Sesuvium verrucosum*, *Spergularia salina*, and *Typha latifolia*.

This alliance occurs in tidal marshes with relatively high salinity, at intermediate tidal elevations with seasonal flooding (Keeler-Wolf and Vaghti 2000, Pickart 2006). Inland marshes in areas with alkali, brackish, or fresh water contain different associates than stands found in coastal marshes.

Bolboschoenus maritimus usually dominates in the wetter, tidal, brackish to sub-saline marshes and ditches, including early successional sites of diked marshes within relict swales and depressions (Baye 2000).

Local Vegetation Description

The Salt marsh bulrush marshes Alliance forms an intermittent to continuous herbaceous layer. The shrub layer is absent and the tree layer is absent. Dominant herbs include *Bolboschoenus maritimus*, and characteristic herbs include *Sarcocornia*

pacifica. Herbs that are sometimes present include *Atriplex prostrata*, *Cuscuta salina*, *Frankenia salina*, *Grindelia stricta*, *Rumex* spp., and *Spartina foliosa*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	0.0	0 – 0	no data	no data

Shrub	0.0	0 – 0	no data	no data
Herb	64.0	45 – 85	1.1	0.5 – 2

Local Membership Rule

Bolboschoenus maritimus or *B. robustus* dominates or co-dominates with *Sarcocornia* (= *Salicornia*) *pacifica*.

Local Environmental Description

Elevation: Mean 7 m, Range 4 – 11 m

Aspect: Flat (3), NW (1)

Slope: Mean 0 degrees, Range 0 – 1 degrees

Macro Topography: Bottom (3), Lower 1/3 of slope (1)

Large Rock: 0.0%

Small Rock: 0.0%

Fines Cover: Mean 46.8%, Range 20.0 – 92.0%

Litter Cover: Mean 44.5%, Range 3.0 – 75%

Soil Texture (field assessed): Muck (3), Fine silty clay (1)

Geology (field or map data): Alluvium (2), Silty alluvium (1), Sandstone and other sedimentary (1)

San Mateo County Watersheds: Pescadero Creek (2), San Gregorio Creek (1)

Other Watersheds, Marin Co.: Novato (1)

Site Impacts

This alliance has very low non-native plant cover (average 0.1%) relative to native cover. Non-native species that occur with highest frequency and abundance include *Atriplex prostrata*.

Associations in San Mateo County

- *Bolboschoenus maritimus*
- *Bolboschoenus maritimus* – *Sarcocornia pacifica*

Classification Comments

Since the number of surveys of this alliance in San Mateo County is low, data from nearby counties were included.

Brassica nigra – Centaurea (solstitialis, melitensis) Herbaceous Semi-Natural Alliance

Common Name: Upland mustards – yellow star-thistles and other ruderal forbs

NVC Alliance Code: A4214. *Brassica nigra - Raphanus* spp. Ruderal Annual Forb Meadow Alliance

Statewide Description

Brassica nigra, *Brassica rapa*, *Carduus pycnocephalus*, *Centaurea melitensis*, *Centaurea solstitialis*, *Cynara cardunculus*, *Euphorbia terracina*, *Hirschfeldia incana*, *Isatis tinctoria* or *Raphanus sativus* or similar ruderal forb is dominant in the herbaceous layer. Emergent trees and shrubs may be present at low cover.

We have included five mustards within this alliance based on their ecological similarities, and we also have updated the alliance to include other non-native invasive forbs including *Cynara cardunculus*, *Euphorbia terracina*, *Carduus pycnocephalus*, *Centaurea solstitialis*, *C. melitensis*, and *C. sulphurea*. As a whole, stands of this alliance form dense colonies that overtop other plants whether they are native or non-native. All respond positively to regular frequent disturbance, whether it be fire, disking, intermittent flooding, or heavy grazing.

Local Vegetation Description

The Upland mustards – yellow star-thistles and other ruderal forbs Alliance forms an

intermittent to continuous herbaceous layer. The shrub layer is open and the tree layer is absent. Characteristic herbs include *Avena* spp.. and *Bromus diandrus*. Those herbs often present include *Bromus hordeaceus* and *Carduus pycnocephalus*, and herbs that are sometimes present include *Aira caryophyllea*, *Anagallis arvensis*, *Anaphalis margaritacea*, *Brachypodium distachyon*, *Brassica* spp., *Briza maxima*, *Calystegia* spp., *Centaurea solstitialis*, *Clarkia purpurea*, *Clarkia* spp., *Conium maculatum*, *Crepis vesicaria*, *Daucus*

carota, *Daucus pusillus*, *Dichelostemma capitatum*, *Eriogonum latifolium*, *Eriophyllum stoechadifolium*, *Erodium* spp., *Eschscholzia californica*, *Foeniculum vulgare*, *Galium aparine*, *Geranium dissectum*, *Hirschfeldia incana*, *Hordeum* spp., *Hypochaeris glabra*, *Hypochaeris radicata*, *Hypochaeris* spp., *Juncus bufonius*, *Juncus patens*, *Linum bienne*, *Lolium perenne*, *Madia sativa*, *Medicago* spp., *Nassella pulchra*, *Oxalis pes-caprae*, *Picris echioides*, *Plantago lanceolata*, *Pteridium aquilinum*, *Raphanus sativus*, *Rumex crispus*, *Scandix pecten-veneris*, *Silybum marianum*, *Sonchus asper*, *Trifolium* spp., *Urospermum picroides*, *Vicia gigantea*, *Vicia sativa*, and *Vulpia bromoides*.

Commonly associated emergent shrubs at sparse cover include *Baccharis pilularis* and *Rubus ursinus*.

Centaurea solstitialis Semi-natural Association

Common Name: Yellow Star Thistle Fields Patches

Alliance: *Brassica nigra – Centaurea (solstitialis, melitensis)* Herbaceous Semi-Natural Alliance

Local Vegetation Description

The Yellow Star Thistle Fields Association forms an intermittent to continuous herbaceous layer. The shrub layer is absent and the tree layer is absent. Dominant herbs include *Centaurea solstitialis*, and characteristic herbs include *Avena* spp., *Bromus diandrus*, *Bromus hordeaceus*, *Carduus pycnocephalus*, and *Nassella pulchra*. Those herbs often present include *Brachypodium distachyon*, *Brassica* spp., *Briza maxima*, *Calystegia* spp., *Clarkia* spp., *Clarkia purpurea*, *Crepis vesicaria*, *Daucus carota*, *Daucus pusillus*, *Dichelostemma capitatum*, *Erodium* spp., *Eschscholzia californica*, *Galium aparine*, *Hypochaeris* spp., *Hypochaeris glabra*, *Madia sativa*, *Oxalis pes-caprae*, *Scandix pecten-veneris*, *Sonchus asper*, *Trifolium* spp., *Vicia sativa*, and *Vulpia bromoides*.

***Bromus carinatus – Elymus glaucus* Herbaceous Alliance**

Common Name: California brome – blue wildrye prairie

NVC Alliance Code: A4244. *Bromus carinatus - Elymus glaucus* Mesic Meadow Alliance

Statewide Description

Elymus glaucus, *Bromus carinatus*, *Bromus maritimus*, and/or *Pteridium aquilinum* dominate or co- dominate in the herbaceous layer with *Agrostis scabra*, *Anagallis arvensis*, *Bromus diandrus*, *Calamagrostis canadensis*, *Carex feta*, *Carex pellita*, *Glyceria striata*, *Heracleum maximum*, *Juncus oxymeris*, *Phleum pratense*, *Poa pratensis*, *Senecio clarkianus*, *Senecio triangularis*, *Solidago canadensis*, *Stachys albens*, *Veratrum californicum*, and *Vulpia bromoides*.

This alliance is represented by four different taxa, *Elymus glaucus*, *Bromus carinatus*, *B. maritimus*, and *Pteridium aquilinum*, which because of their ecological relatedness, have been combined into a single alliance. The *Pteridium aquilinum* Association is currently known only from the northern Coast Ranges.

Sawyer (2009) stands dominated by *E. glaucus*, *B. carinatus*, or *P. aquilinum* were assigned to the *Elymus glaucus*, *Bromus carinatus*, or *Pteridium aquilinum* Association respectively, each within its own provisional alliance. Based on recent county-wide analyses, we now recognize one alliance which contains elements of these three associations. Mixes of *Bromus carinatus* and *Elymus glaucus* with a high cover of *Pteridium* are placed in the *Pteridium aquilinum* Association.

Local Vegetation Description

The California brome – blue wildrye prairie Alliance forms an intermittent to continuous herbaceous layer. The shrub layer is sparse to open and the tree layer is sparse or absent. Characteristic herbs include *Bromus carinatus* and *Elymus glaucus* along with *Achillea millefolium*, *Avena* spp., *Bromus hordeaceus*, *Rumex acetosella*, and *Vulpia bromoides*. Those herbs often present include *Aira caryophyllea*, *Bromus diandrus*, *Clarkia rubicunda*, *Geranium dissectum*, *Lolium perenne*, *Madia sativa*, and *Sisyrinchium bellum*, and herbs that are sometimes present include *Agoseris grandiflora*, *Anagallis arvensis*, *Briza minor*, *Carduus pycnocephalus*, *Chlorogalum pomeridianum*, *Cirsium vulgare*, *Clarkia purpurea*, *Crepis vesicaria*, *Cynosurus echinatus*, *Erodium botrys*, *Eschscholzia californica*, *Galium aparine*, *Hypochaeris radicata*, *Lupinus bicolor*, *Ranunculus californicus*, *Sidalcea malviflora*, *Sonchus asper*, *Torilis nodosa*, *Triteleia laxa*, and *Vicia sativa*. Commonly associated emergent shrubs at sparse cover include *Baccharis pilularis*. Commonly associated non-vascular plants include Moss.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	0.0	0 – 0	no data	no data
Hardwood	0.0	0 – 0.2	no data	no data

Shrub	1.0	0 – 6	0.3	0 – 0.5
Herb	73.3	55 – 85	0.7	0 – 2

Local Membership Rule

Bromus carinatus, *Elymus glaucus* and/or *Pteridium aquilinum* dominate or co-dominate near meadows, in forested openings, and on elevated flats. *Achillea millefolium*, *Bromus hordeaceus*, *Geranium dissectum*, *Rumex acetosella*, and *Vulpia bromoides* are often present.

Local Environmental Description

Elevation: Mean 552 m, Range 13 – 764 m

Aspect: NE (9), SW (4), SE (2), NW (2), W (1), Flat (1)

Slope: Mean 9 degrees, Range 0 – 40 degrees

Macro Topography: Upper 1/3 of slope (6), Middle 1/3 of slope (4), Lower 1/3 of slope (3), Bottom (2), Middle to Upper 1/3 of slope (1), Ridge top (1)

Large Rock: 0.0%

Elymus glaucus Association

Common Name: Blue Wildrye Patches

Alliance: *Bromus carinatus – Elymus glaucus* Herbaceous Alliance

Local Vegetation Description

The Blue Wildrye Association forms a continuous herbaceous layer. The shrub layer is sparse, and the tree layer is absent. Dominant herbs include *Elymus glaucus*, and characteristic herbs include *Aira caryophyllea*, *Avena* spp., *Bromus carinatus*, *Bromus hordeaceus*, *Geranium dissectum*, *Rumex acetosella*, *Sisyrinchium bellum*, and *Vulpia bromoides*. Those herbs often present include *Achillea millefolium*, *Briza minor*, *Cirsium vulgare*, *Clarkia rubicunda*, *Lolium perenne*, *Sidalcea malviflora*, and *Torilis nodosa*. Commonly associated emergent shrubs at sparse cover include *Baccharis pilularis*, and commonly associated non-vascular plants include Moss.

Cakile (*edentula*, *maritima*) Herbaceous Provisional Semi-Natural Alliance

Common Name: Sea rocket sands

NVC Alliance Code: N/A.

Statewide Description

Cakile edentula or Cakile maritima is dominant in the herbaceous layer.

The National Vegetation Classification (NatureServe 2007a) recognizes a sparsely vegetated alliance in the United States and in Europe. *C. edentula* and *C. maritima* are not natives in California, and they are two of a very short list of species that thrive along the leading edge of the beach. Both species have similar reproductive output, but *C. maritima* has higher survivorship and more seed output on nearshore dunes, where it might live for several years. *C. maritima* is replacing *C. edentula* at southern beaches of California, whereas the more severe winter conditions at northern areas allow for their coexistence (Boyd and Barbour 1993). *Layia carnosa* and *Abronia umbellata* ssp. *breviflora* (CNPS list 1B.1 plants) grow with these species on upper beaches and landward edges of the nearshore dunes.

Local Vegetation Description

The Sea rocket sands Alliance forms an open herbaceous layer. The shrub layer is absent and the tree layer is sparse to absent. Dominant herbs include *Cakile maritima*, and characteristic herbs include *Ambrosia chamissonis* and *Elymus mollis*. Those herbs often present include *Ammophila arenaria*, *Atriplex prostrata*, and *Tetragonia*.

tetragonioides. Commonly associated regenerating or shrubby trees at sparse cover include *Umbellularia californica*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	0.0	0 – 0	no data	no data
Hardwood	0.0	0 – 0	no data	no data
Regenerating or Shrubby Tree	0.1	0 – 0.2	0.3	0 – 0.5
Shrub	0.0	0 – 0	no data	no data
Herb	13.0	11 – 15	0.3	0 – 0.5

Local Membership Rule

Cakile edentula and/or *C. maritima* are strongly dominant along active beaches at the debris line.

Local Environmental Description

Elevation: Mean 3 m, Range 0 – 5 m

Aspect: Flat (1), SW (1)

Slope: Mean 3 degrees, Range 0 – 5 degrees

Macro Topography: Bottom to Lower 1/3 of slope (1), Bottom (1)

Large Rock: 0.0%

Small Rock: 0.0%

Fines Cover: Mean 92.0%, Range 85 – 99%

Litter Cover: Mean 8.0%, Range 1.0 – 15%

Soil Texture (field assessed): Fine sand (1), Sand, (class unknown) (1)

Geology (field or map data): Sand dunes (2)

San Mateo County Watersheds: San Gregorio Creek (1)

Other Watersheds, Marin Co.: Tomales Bay (1)

Site Impacts

This alliance has greater cover of exotics than natives, non-native plant cover (average 93.8%) relative to native cover. Non-native species that occur with highest frequency and abundance include *Ammophila arenaria*, *Atriplex prostrata*, *Cakile maritima*, and *Tetragonia tetragonoides*.

Associations in San Mateo County

- *Cakile (edentula, maritima)*

Classification Comments

Since the number of surveys of this alliance in San Mateo County is low, data from nearby counties were included.

***Calamagrostis nutkaensis* Herbaceous Alliance**

Common Name: Pacific reed grass meadows

NVC Alliance Code: A3739. *Festuca rubra* - *Calamagrostis nutkaensis* Exposed Coastal Headland Grassland Alliance

Statewide Description

Calamagrostis nutkaensis is dominant or co-dominant in the herbaceous layer with *Anthoxanthum odoratum*, *Artemisia suksdorfii*, *Elymus glaucus*, *Festuca arundinacea*, *Festuca rubra*, *Heracleum maximum*, *Holcus lanatus*, and *Pteridium aquilinum*. Emergent trees and shrubs may be present at low cover, including *Picea sitchensis*, *Baccharis pilularis*, *Gaultheria shallon*, *Rubus* spp., or *Vaccinium ovatum*.

Often considered part of the coastal prairie (Bartolome 1994, Hektner and Foin 1977), the alliance occupies the coastal terraces and mixes with the *Danthonia californica* and *Deschampsia cespitosa* Alliances at a fine scale. The alliance also occurs in freshwater swales, depressions, and springs, mixed with other wetland herbaceous types. It forms tall grasslands on moist coastal bluffs at the southern extent of its range. On the broad scale, *Calamagrostis nutkaensis* stands mix with forested stands of the *Alnus rubra* and *Picea sitchensis* Alliances, and shrublands of the *Baccharis pilularis*, *Lupinus arboreus*, *Salix hookeriana*, and *Rubus* spp. Alliances.

Local Vegetation Description

The Pacific reed grass meadows Alliance forms an open to continuous herbaceous

Calamagrostis nutkaensis Herbaceous Alliance

layer. The shrub layer is open to intermittent and the tree layer is sparse. Dominant herbs include *Calamagrostis nutkaensis*, and characteristic herbs include *Castilleja affinis*, *Erigeron glaucus*, *Eriophyllum stoechadifolium*, *Polystichum munitum*, and *Pteridium aquilinum*. Those herbs often present include *Agrostis stolonifera*, *Aira caryophyllea*, *Anaphalis margaritacea*, *Chlorogalum pomeridianum*, *Ligusticum apiifolium*, and *Rumex acetosella*. Characteristic shrubs include *Baccharis pilularis*, *Diplacus aurantiacus*, *Rubus ursinus*, *Toxicodendron diversilobum*. *Lupinus versicolor* and *Vaccinium ovatum* are shrubs that are often present. Commonly associated non-vascular plants include Moss.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range

***Calamagrostis nutkaensis* Association**

Common Name: Pacific reed grass association Patches

Alliance: *Calamagrostis nutkaensis* Herbaceous Alliance

Local Vegetation Description

The Pacific reed grass association Association forms an intermittent to continuous herbaceous layer. The shrub layer is open and the tree layer is absent. Dominant herbs include *Calamagrostis nutkaensis*, and characteristic herbs include *Achillea millefolium* and *Pteridium aquilinum*. Those herbs often present include *Aira caryophyllea*, *Angelica hendersonii*, *Dudleya farinosa*, *Erigeron glaucus*, *Eriophyllum stoechadifolium*, *Hypochaeris radicata*, *Iris douglasiana*, *Plantago lanceolata*, *Rumex acetosella*, *Sedum spathulifolium*, and *Stachys ajugoides*, and herbs that are sometimes present include *Agrostis stolonifera*, *Anaphalis margaritacea*, *Briza maxima*, *Bromus diandrus*, *Castilleja* spp., *Castilleja affinis*, *Chlorogalum pomeridianum*, *Deschampsia cespitosa*, *Eriogonum latifolium*, *Eryngium armatum*, *Erysimum*, *Fragaria chiloensis*, *Gamochaeta ustulata*, *Gnaphalium*, *Holcus lanatus*, *Phacelia californica*, *Polypodium scouleri*, *Polystichum munitum*, *Vulpia bromoides*, and *Vulpia myuros*. Commonly associated emergent shrubs at sparse cover include *Vaccinium ovatum*, *Gaultheria shallon*, and *Rubus ursinus*.

***Carex nudata* Herbaceous Alliance**

Common Name: Torrent sedge patches

NVC Alliance Code: N/A.

Statewide Description

Carex nudata is dominant in the herbaceous layer with *Artemisia douglasiana*, *Artemisia ludoviciana*, *Carex praegracilis*, *Carex senta*, *Carex serratodens*, *Cyperus eragrostis*, *Darmera peltata*, *Datisca glomerata*, *Equisetum arvense*, *Equisetum hyemale*, *Mimulus guttatus*, *Paspalum dilatatum*, *Poa pratensis*, and *Stachys stricta*. Emergent riparian trees may be present at low cover, especially *Alnus* spp., *Populus* spp. or *Salix* spp.

The *Carex nudata* Alliance occurs along perennially and seasonally flooded streams in California. Flooding from either winter or spring snowmelt creates regular mechanical impact to boulder and cobble beds creating the characteristic substrate associated with this alliance. Highly scoured reaches of streams flowing through bedrock do not typically harbor the sedge. *Carex senta*, another tufted streambed species, grows in situations similar to *Carex nudata*; it might warrant inclusion in this alliance with further investigation. *Carex nudata* stands are frequently associated with stands of the *Alnus rhombifolia* Alliance and *C. nudata* may occur as an understory beneath open *A. rhombifolia* stands, depending upon flooding frequency and intensity.

Local Vegetation Description

The Torrent sedge patches Alliance forms an intermittent herbaceous layer in the single survey available. The shrub layer is sparse and the tree layer is absent. Dominant herbs include *Carex nudata*, and characteristic herbs include *Cirsium vulgare*, *Equisetum* spp., *Fragaria vesca*, *Galium aparine*, *Helenium puberulum*, *Petasites frigidus*, *Scirpus microcarpus*, *Trifolium subterraneum*, *Urtica dioica*, and *Woodwardia fimbriata*. Commonly associated regenerating or shrubby trees at sparse cover include *Alnus rhombifolia*, *Acer macrophyllum*, and *Sequoia sempervirens*. Commonly associated emergent shrubs at sparse cover include *Cornus sericea*, *Salix lasiolepis*, and *Toxicodendron diversilobum*.

Commonly associated non-vascular plants include Moss.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	0.0	NA	no data	no data
Hardwood	0.0	NA	no data	no data
Regenerating or Shrubby Tree	2.4	NA	3.5	2 – 5
Shrub	2.2	NA	1.5	1 – 2
Herb	36.0	NA	0.3	0 – 0.5

Local Membership Rule

Carex nudata dominates with other herbs lower in cover including *Equisetum* spp. along rocky streams and streambanks.

Local Environmental Description

Elevation: 118 m

Aspect: Flat (1)

Slope: 2 degrees

Macro Topography: Bottom (1)

Large Rock: 10.0%

Small Rock: 70.0%

Fines Cover: 12.0%

Litter Cover: 5%

Soil Texture (field assessed): Fine sand (1)

Geology (field or map data): Mixed alluvium (1)

San Mateo County Watersheds: Pescadero Creek (1)

Site Impacts

This alliance has low non-native plant cover (average 1.0%) relative to native cover. Non-native species that occur with highest frequency and abundance include *Cirsium vulgare* and *Trifolium subterraneum*.

Associations in San Mateo County

- *Carex nudata*

Classification Comments

None.

***Carex obnupta – Oenanthe sarmentosa – Scirpus microcarpus* Herbaceous Alliance**

Common Name: Slough sedge – water-parsley – small-fruited bulrush marsh

NVC Alliance Code: A4414.

Statewide Description

Carex obnupta, *Juncus lescurii*, *Oenanthe sarmentosa*, *Argentia egedii* (=*Potentilla anserina*) or *Scirpus microcarpus* is dominant or co-dominant in the herbaceous layer with *Agrostis stolonifera*, *Athyrium filix-femina*, *Carex* spp., *Cynosurus echinatus*, *Eleocharis macrostachya*, *Epilobium* spp., *Festuca arundinacea*, *Galium triflorum*, *Geum macrophyllum*, *Glyceria elata*, *Holcus lanatus*, *Hydrocotyle ranunculoides*, *Juncus patens*, *Lemna minuta*, *Luzula comosa*, *Lysichiton americanus*, *Oxypolis occidentalis*, *Rumex conglomeratus*, *Schoenoplectus pungens*, *Scirpus congondii*, *Sidalcea malviflora*, *Symphytum chilense*, *Typha latifolia* and *Viola macloskeyi*. Emergent trees and shrubs may be present at low cover, including trees: *Alnus rubra*, and shrubs: *Baccharis pilularis*, *Morella californica*, *Rubus* spp., *Salix hookeriana*, and *Salix lasiolepis*.

This alliance includes several previously separate alliances, in which the concept has been broadened based on overlapping environmental and floristic features (NatureServe 2021). Stands in California occur in moist to saturated swales, edges of coastal lagoons, tidally influenced wetlands, and other areas where fresh and brackish

water meet. Plants often form dense, continuous stands that lack or may occur under shrub or forest canopies. Open stands lacking or having only a few emergent shrubs or trees are included in this alliance. Stands with *C. obnupta*, *Oenanthe sarmentosa*, and/or *Scirpus microcarpus* understories are in the *Alnus rubra*, *Morella californica*, *Picea sitchensis*, *Pinus contorta* ssp. *contorta*, and *Salix hookeriana* alliances. Trees and shrubs do not typically colonize the more coastal stands due to the longer inundation period and exposure to strong salt-laden winds. In wet but more sheltered settings, tree development is favored.

At Humboldt Bay National Refuge, stands with *Oenanthe sarmentosa* and *Scirpus microcarpus* occur in semipermanently-flooded freshwater to slightly brackish marshes, and stands may retain standing water through the summer (Pickart 2006). In general, they are seasonally flooded, freshwater to brackish marshes, which are inundated with water for the majority of the year.

Local Vegetation Description

The Slough sedge – water-parsley – small-fruited bulrush marsh Alliance forms an intermittent to continuous herbaceous layer. The shrub layer is open and the tree layer is open. Those herbs often present include *Euthamia occidentalis*, *Oenanthe sarmentosa*, and *Potentilla anserina*, and herbs that are sometimes present include *Achillea millefolium*, *Carex obnupta*, *Cirsium vulgare*, *Epilobium ciliatum*, *Eriophyllum stoechadifolium*, *Fragaria chiloensis*, *Galium aparine*, *Grindelia stricta*, *Holcus lanatus*, *Juncus arcticus*, *Juncus lescurii*, *Juncus* spp., *Lythrum hyssopifolium*, *Marah fabaceus*, *Mimulus guttatus*, *Polygonum* spp., *Pterostegia drymarioides*, *Rumex crispus*, *Rumex occidentalis*, *Rumex salicifolius*, *Scirpus microcarpus*, *Scrophularia californica*, *Solanum douglasii*, *Sonchus asper*, *Symphytum chilense*, and *Urtica dioica*. Commonly associated emergent shrubs include *Rubus ursinus*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	0.3	0 – 3	12.5	10 – 15
Hardwood	0.3	0 – 3	3.5	2 – 5

Argentina egedii – (Juncus lescurii) Association

Common Name: Silverweed – (San Francisco Rush) Patches

Alliance: *Carex obnupta* – *Oenanthe sarmentosa* – *Scirpus microcarpus* Herbaceous Alliance

Local Vegetation Description

The Silverweed – (San Francisco Rush) Association forms a continuous herbaceous layer in the single survey available. The shrub layer is sparse and the tree layer is absent. Dominant herbs include *Argentina egedii* (=*Potentilla anserina*). Those herbs often present include *Holcus lanatus*, and herbs that are sometimes present include *Achillea millefolium*, *Briza minor*, *Carex obnupta*, *Cirsium vulgare*, *Eryngium armatum*, *Festuca arundinacea*, *Juncus* spp., *Juncus bufonius*, *Juncus effusus*, *Juncus patens*, *Juncus phaeocephalus*, *Lotus corniculatus*, *Plantago lanceolata*, *Rumex acetosella*, *Rumex crispus*, *Sisyrinchium bellum*, *Taraxacum officinale*, and *Trifolium wormskioeldii*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range

Hardwood	0.0	NA	no data	no data
Regenerating or Shrubby Tree	0.0	NA	no data	no data
Shrub	1.0	NA	0.3	0 – 0.5
Herb	74.0	NA	0.3	0 – 0.5

Local Environmental Description

Elevation: 10 m

Aspect: Flat (1)

Slope: 0 degrees

Macro Topography: Bottom (1)

Large Rock: 0.0%

Small Rock: 0.0%

Fines Cover: 5.0%

Litter Cover: 60%

Soil Texture (field assessed): Muck (1)

Geology (field or map data):

San Mateo County Watersheds: Pescadero Creek (1)

Site Impacts

This association has low non-native plant cover (average 7.9%) relative to native cover. Non-native species that occur with highest frequency and abundance include *Briza minor*, *Cirsium vulgare*, *Festuca arundinacea*, *Holcus lanatus*, *Lotus corniculatus*, *Plantago lanceolata*, *Rumex acetosella*, *Rumex crispus*, and *Taraxacum officinale*.

Classification Comments

The name of the vegetation type has been updated from the *Argentina egedii* Association. The scientific name within the alliance and association is based on the USDA/NRCS PLANTS database name for the taxon, whereas the California flora accepts the name *Potentilla anserina* for this species.

***Scirpus microcarpus* Pacific Coast Association**

Common Name: Small-fruited Bulrush Pacific Coast Marsh Patches

Alliance: *Carex obnupta* – *Oenanthe sarmentosa* – *Scirpus microcarpus* Herbaceous Alliance

Local Vegetation Description

The Small-fruited Bulrush Pacific Coast Marsh Association forms a continuous herbaceous layer. The shrub layer is absent or open and the tree layer is sparse or absent. Dominant herbs include *Scirpus microcarpus*. Those herbs that are sometimes present include *Athyrium filix-femina*, *Calamagrostis nutkaensis*, *Carex obnupta*, *Cirsium vulgare*, *Equisetum arvense*, *Oenanthe sarmentosa*, *Potentilla anserina*, *Stachys ajugoides*, and *Urtica dioica*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range

Sandstone and other sedimentary (1), Sedimentary (type unknown) (1)

San Mateo County Watersheds: Ano Nuevo (1), Pacifica (1), Pescadero Creek (1),
San Mateo Bayside (1)

Site Impacts

This association has low non-native plant cover (average 18.4%) relative to native cover.

Classification Comments

Scirpus microcarpus Pacific Coast Association
Carex obnupta – *Oenanthe sarmentosa* – *Scirpus microcarpus* Herbaceous Alliance

This association is newly distinguished from *Scirpus microcarpus* dominated stands in montane settings, which were all formerly included in their own alliance. Now the coastal association is placed here with related associations.

Cortaderia (*jubata*, *selloana*) Herbaceous Semi-Natural Alliance

Common Name: Pampas grass patches

NVC Alliance Code: A1203. *Cortaderia jubata* - *Cortaderia selloana* Ruderal Grassland Alliance

Statewide Description

Cortaderia jubata or *Cortaderia selloana* is dominant in the herbaceous and shrub canopies. Emergent trees and shrubs may be present at low cover. Stands of *Cortaderia* invade coastal bluff and coastal scrub stands of *Artemisia californica*, *Baccharis pilularis*, and *Eriogonum fasciculatum* alliances. They grow in moist, open forest stands and infest inland riparian stands in the Great Valley.

Local Vegetation Description

The Pampas grass patches Alliance forms an open to intermittent herbaceous layer. The shrub layer is open and the tree layer is absent. Dominant herbs include *Cortaderia jubata*. Those herbs often present include *Achillea millefolium*, *Anagallis arvensis*, *Avena* spp., *Camissonia ovata*, *Cardamine oligosperma*, *Clinopodium douglasii*, *Daucus carota*, *Dudleya farinosa*, *Eriogonum* spp., *Gamochaeta ustulata*, *Geranium dissectum*, *Hypochaeris radicata*, *Pseudognaphalium ramosissimum*, *Sedum spathulifolium*, and *Symphytum chilense*. Commonly associated emergent shrubs include *Artemisia californica*, *Genista monspessulana*, *Toxicodendron diversilobum*, *Baccharis pilularis*, *Diplacus aurantiacus*, and *Echium candicans*. Commonly associated non-vascular plants include Lichen and Moss.

Cortaderia (jubata, selloana) Herbaceous Semi-Natural Alliance

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	0.0	0 – 0	no data	no data
Hardwood	0.0	0 – 0	no data	no data

Shrub	5.0	2 – 8	0.5	0 – 1
Herb	50.5	18 – 83	1.1	0.5 – 2

Local Membership Rule

Cortaderia jubata or *Cortaderia selloana* dominates in naturalized stands, sometimes in dense clumps, or with other non-native plants such as *Echium candicans* dominant or co-dominant with *Cortaderia jubata*.

Local Environmental Description

Elevation: Mean 100 m, Range 96 – 104 m

Aspect: SE (1), SW (1)

Slope: Mean 30 degrees, Range 21 – 38 degrees

Macro Topography: Middle 1/3 of slope (1), Upper 1/3 of slope (1)

Large Rock: Mean 46.6%, Range 0.0 – 93%

Small Rock: Mean 2.7%, Range 0.4 – 5.0%

Fines Cover: Mean 3.5%, Range 2.0 – 5.0%

Litter Cover: Mean 37.0%, Range 4.0 – 70%

Soil Texture (field assessed): Medium to very fine, loamy sand (1), Not recorded (1)

Geology (field or map data): Franciscan melange (1), Granitic (generic) (1)

San Mateo County Watersheds: Pacifica (1)

Other Watersheds, Marin Co.: Bolinas (1)

Site Impacts

This alliance has greater cover of exotics than natives, non-native plant cover (average 84.0%) relative to native cover. Non-native species that occur with highest frequency and abundance include *Anagallis arvensis*, *Cortaderia jubata*, *Daucus carota*, *Echium candicans*, *Genista monspessulana*, *Geranium dissectum*, and *Hypochaeris radicata*.

Associations in San Mateo County

- *Cortaderia (jubata, selloana)*

Classification Comments

Since the number of surveys of this alliance in San Mateo County is low, data from nearby counties were included.

***Deschampsia cespitosa – Hordeum brachyantherum – Danthonia californica* Herbaceous Alliance**

Common Name: Coastal tufted hair grass – Meadow barley – California oatgrass meadows

NVC Alliance Code: A3820. *Danthonia californica - Carex lenticularis - Deschampsia cespitosa* Coastal & Lowland Marsh Alliance

Statewide Description

Deschampsia cespitosa, *Hordeum brachyantherum* or *Iris douglasiana* is dominant or co-dominant in the herbaceous layer with *Achillea millefolium*, *Agrostis stolonifera*, *Aira caryophyllea*, *Anthoxanthum odoratum*, *Argentina egedii*, *Carex* spp., *Cirsium vulgare*, *Danthonia californica*, *Deschampsia danthonioides*, *Distichlis spicata*, *Eleocharis acicularis*, *Eleocharis macrostachya*, *Epilobium ciliatum*, *Eryngium armatum*, *Holcus lanatus*, *Horkelia marinensis*, *Hypochaeris radicata*, *Juncus arcticus*, *Juncus phaeocephalus*, *Lilaeopsis masonii*, *Lolium perenne*, *Lotus* spp., *Lupinus versicolor*, *Medicago polymorpha*, *Plantago lanceolata*, *Potentilla gracilis*, *Ranunculus californicus*, *Ranunculus flammula*, *Rumex acetosella*, *Senecio hydrophiloides*, *Sisyrinchium bellum*, *Trifolium* spp. and *Triglochin striata*.

Emergent shrubs may be present at low cover, including *Baccharis pilularis*, *Rosa nutkana*, *Rubus* spp. and *Rubus ursinus*.

We now accept the treatment of two alliances for *Deschampsia cespitosa*, separating the coastal and lowland stands from those in higher-elevation mountain meadows. Stands

along the coast and at lower elevations occur in moist, maritime climates on soils with high moisture-holding capacity or on perched water tables, whereby the associations included in this alliance have a lush growth of *D. cespitosa*, *Danthonia californica*, *Hordeum brachyantherum*, and other perennial herbs (NatureServe 2020).

Similar to *D. cespitosa*, *H. brachyantherum* has a broad temperature tolerance, enabling stands to exist adjacent to a divergent array of wetland alliances. Directly along the coast, associations of this alliance interdigitate on a fine scale with herbaceous stands of the *Calamagrostis nutkaensis*, *Festuca idahoensis* - *Danthonia californica*, *Carex obnupta*, and *Juncus* spp. alliances; and woody stands of *Baccharis pilularis*, *Pinus muricata* and *Pseudotsuga menziesii* alliances; and non-native types. Typical associated herbs include *Eleocharis macrostachya*, *Juncus balticus*, and *J. nevadensis*.

Stands of *Deschampsia cespitosa*, *Danthonia californica*, *Hordeum brachyantherum*, in montane meadows fall under the *Danthonia californica* - *Deschampsia cespitosa* - *Camassia quamash* Alliance.

Local Vegetation Description

The Coastal tufted hair grass – Meadow barley – California oatgrass meadows Alliance forms an intermittent to continuous herbaceous layer. The shrub layer is open and the tree layer is open. Those herbs often present include *Achillea millefolium*, *Danthonia californica*, *Fragaria chiloensis*, *Gamochaeta ustulata*, *Hypochaeris radicata*, *Juncus bufonius*, and *Lotus corniculatus*, and herbs that are sometimes present include *Anagallis arvensis*, *Armeria maritima*, *Bromus carinatus*, *Bromus hordeaceus*, *Camissonia ovata*, *Carex brevicaulis*, *Carex subbracteata*, *Centaurium muehlenbergii*, *Deschampsia cespitosa*, *Dudleya caespitosa*, *Eriogonum latifolium*, *Eryngium armatum*, *Geranium dissectum*, *Grindelia stricta*, *Holcus lanatus*, *Hordeum brachyantherum*, *Juncus occidentalis*, *Juncus patens*, *Juncus phaeocephalus*, *Lolium perenne*, *Lotus formosissimus*, *Lythrum hyssopifolium*, *Picris echioides*, *Plantago lanceolata*, *Plantago maritima*, *Prunella vulgaris*, *Ranunculus californicus*, *Rumex acetosella*, *Rumex crispus*, *Sidalcea malviflora*, *Sisyrinchium bellum*, *Sonchus asper*, *Vulpia bromoides*, and *Vulpia myuros*. Commonly associated emergent shrubs include *Baccharis pilularis*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	0.4	0 – 3	7.5	5 – 10
Hardwood	0.0	0 – 0	no data	no data
Regenerating or Shrubby Tree	0.0	0.0 – 0.0	no data	no data
Shrub	4.8	0.2 – 15.0	0.4	0 – 2
Herb	63.9	39 – 82	0.3	0 – 0.5

Local Membership Rule

Deschampsia cespitosa, *Danthonia californica*, *Iris douglasiana*, and/or *Eryngium armatum* dominate or co-dominate individually or in combination (if *Holcus lanatus* has the highest cover, but these three species have at least 10% combined cover, key to *Deschampsia*). Settings range from coastal dunes and bluffs to inland plains (e.g., Santa Rosa Plain) to montane meadows.

Local Environmental Description

Elevation: Mean 15 m, Range 9 – 25 m

Aspect: Flat (4), NE (2), NW (1), Variable (1)

Slope: Mean 2 degrees, Range 0 – 6 degrees

Macro Topography: Lower 1/3 of slope (2), Ridge top (2), Bottom to Lower 1/3 of slope (1), Middle 1/3 of slope (1), Upper 1/3 of slope (1), Bottom (1)

Large Rock: Mean 0.0%, Range 0.0 – 0.0%

Small Rock: Mean 0.2%, Range 0.0 – 0.2%

Fines Cover: Mean 39.0%, Range 5.0 – 97.0%

Litter Cover: Mean 53.1%, Range 0.0 – 92%

Soil Texture (field assessed): Moderately fine clay loam (3), Sand, (class unknown) (2),
Moderately fine sandy clay loam (1), Coarse, loamy sand (1), Fine sandy clay (1)

Geology (field or map data): Sedimentary (type unknown) (3), Granitic (generic) (1),
Sand dunes (1), Sandstone (1), Sandstone and other sedimentary (1), Clayey
alluvium (1)

San Mateo County Watersheds: Ano Nuevo (4), Pacifica (3), Tunitas Creek (1)

Site Impacts

This alliance has moderate non-native plant cover (average 24.6%) relative to native cover. Non-native species that occur with highest frequency and abundance include *Anagallis arvensis*, *Bromus hordeaceus*, *Geranium dissectum*, *Holcus lanatus*, *Hypochaeris radicata*, *Lotus corniculatus*, *Lythrum hyssopifolium*, *Picris echioides*, *Plantago lanceolata*, *Rumex acetosella*, *Rumex crispus*, *Sonchus asper*, *Vulpia bromoides*, and *Vulpia myuros*.

***Hordeum brachyantherum* Lowland Association**

Common Name: Meadow Barley Lowland Wet Meadow Patches

Alliance: *Deschampsia cespitosa* – *Hordeum brachyantherum* – *Danthonia californica*
Herbaceous Alliance

Local Vegetation Description

The Meadow Barley Lowland Wet Meadow Association forms a continuous herbaceous layer. The shrub layer is open and the tree layer is sparse. Dominant herbs include *Hordeum brachyantherum* and *Lolium perenne*. Those herbs that are sometimes present include *Achillea millefolium*, *Avena* spp., *Bromus diandrus*, *Holcus lanatus*, *Hordeum marinum*, *Nassella pulchra*, and *Sisyrinchium bellum*.

Sedimentary (type unknown) (1)

San Mateo County Watersheds: Ano Nuevo (1), Tunitas Creek (1)

Other Watersheds, Santa Clara Co.: Guadalupe River (4)

Site Impacts

This association has greater cover of non-native (average 54.1%) than native. Non-native species that occur with highest frequency and abundance include *Bromus diandrus*, *Hordeum marinum*, *Lolium perenne*, and *Lotus corniculatus*.

Classification Comments

This association is revised by separating these lowland surveys from montane ones, and placing the association in this revised alliance. Since the number of surveys of this association in San Mateo County are low, data from nearby counties were included.

Hordeum brachyantherum Lowland Association

Deschampsia cespitosa – *Hordeum brachyantherum* – *Danthonia californica* Herbaceous Alliance

Distichlis spicata Herbaceous Alliance

Common Name: Salt grass flats

NVC Alliance Code: A1332. *Distichlis spicata* Alkaline Wet Meadow Alliance

Statewide Description

Distichlis spicata is dominant or co-dominant in the herbaceous layer with *Agrostis viridis*, *Ambrosia chamissonis*, *Anemopsis californica*, *Atriplex prostrata*, *Batis maritima*, *Bromus diandrus*, *Cotula coronopifolia*, *Eleocharis palustris*, *Frankenia salina*, *Hordeum brachyantherum*, *Hordeum murinum*, *Jaumea carnosa*, *Juncus arcticus*, *Juncus cooperi*, *Lepidium latifolium*, *Leymus triticoides*, *Limonium californicum*, *Muhlenbergia asperifolia*, *Parapholis strigosa*, *Pascopyrum smithii*, *Poa secunda*, *Puccinellia nuttalliana*, *Sarcocornia pacifica*, *Sporobolus airoides*, and *Triglochin maritima*. Emergent shrubs may be present at low cover, including *Allenrolfea occidentalis*, *Atriplex* spp., *Ericameria albida*, *Ericameria nauseosa*, *Sarcobatus vermiculatus*, or *Suaeda moquinii*.

The alliance is commonly found in alkaline or saline environments from the coast to the mountains and deserts of California. Zedler et al. (1999) stated that elevation profiles and vegetation patterns do not always correlate with discrete zonation in coastal marshes, but they recognize three habitats: high marsh, marsh plain, cord grass. *Distichlis spicata* vegetation types are part of the marsh plain habitat.

The National Vegetation Classification (NVC) has two distinct alliances dominated by

Distichlis spicata Herbaceous Alliance

Distichlis spicata for California (NatureServe 2021), which are placed in different groups according to their ecoregional distribution. It is undecided at this time whether we will split this into distinct alliances. More data analysis across the state is needed before additional changes are made.

Local Vegetation Description

The Salt grass flats Alliance forms a continuous herbaceous layer. The shrub layer is sparse and the tree layer is absent. Dominant herbs include *Distichlis spicata*. Those herbs often present include *Grindelia stricta*, *Juncus arcticus*, and *Potentilla anserina*, and herbs that are sometimes present include *Atriplex prostrata*, *Frankenia salina*, *Jaumea carnosa*, *Lotus corniculatus*, *Polypogon monspeliensis*, *Sarcocornia pacifica*, and *Schoenoplectus pungens*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	0.0	0 – 0	no data	no data
Hardwood	0.0	0 – 0	no data	no data
Regenerating or Shrubby Tree	0.0	0.0 – 0.0	no data	no data
Shrub	0.8	0.0 – 5.0	0.8	0.5 – 1
Herb	87.5	80 – 95	0.3	0 – 0.5

Local Membership Rule

Distichlis spicata dominates or co-dominates with *Frankenia salina* and/or *Jaumea carnosa*. Non-native grasses including *Avena* spp. and *Bromus hordeaceus* may have high cover and *Sarcocornia pacifica* may be present as a sub-dominant.

Local Environmental Description

Elevation: Mean 8 m, Range 1 – 15 m

Aspect: Flat (4), SW (2), S (1)

Slope: Mean 1 degrees, Range 0 – 5 degrees

Distichlis spicata Herbaceous Alliance

***Eichhornia crassipes* – *Ludwigia (hexapetala, peploides)* Herbaceous Provisional Semi-Natural Alliance**

Common Name: Water hyacinth – water primrose wetlands

NVC Alliance Code: N/A.

Statewide Description

Eichhornia crassipes, *Ludwigia hexapetala*, *Ludwigia peploides* ssp. *montevidensis* or other *Ludwigia* species are dominant as emergent or floating plants on the water surface. *Azolla* spp., algae, *Sparganium*, *Polygonum* spp. and other hydrophytic plants are often present.

Plants create dense mats in shallow water and over wet soil, occurring alone or with natives such as *Azolla filiculoides*, *Hydrocotyle ranunculoides*, and *Schoenoplectus acutus*. These plants clog river waterways, lakes, irrigation canals, and agricultural wetland areas, and the mats threaten agriculture and federal water delivery projects. *Ludwigia* species compete with native plants, eliminate open water habitat, and reduce oxygen levels critical for fish survival. The mats also pose a public health threat as a habitat for mosquitoes that carry West Nile virus (Sears et al. 2005). Efforts to remove dense, spreading stands of *Ludwigia hexapetala* are underway, especially in the Russian River watershed, through a *Ludwigia* Task Force (Sears et al. 2005, 2006).

Local Vegetation Description

The Water hyacinth – water primrose wetlands Alliance forms an intermittent to

continuous herbaceous layer. The shrub layer is absent and the tree layer is absent. Dominant herbs include *Ludwigia* spp.

Those herbs often present include *Myriophyllum aquaticum*, and herbs that are sometimes present include *Azolla filiculoides*, *Carduus pycnocephalus*, *Eleocharis macrostachya*, *Polygonum punctatum*, *Polypogon monspeliensis*, and *Stuckenia pectinata*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	0.0	0 – 0	no data	no data
Hardwood	0.0	0 – 0	no data	no data
Regenerating or Shrubby Tree	0.0	0 – 0	no data	no data
Shrub	0.0	0 – 0	no data	no data
Herb	68.3	50 – 95	0.3	0 – 0.5

Local Membership Rule

Ludwigia hexapetala or *L. peploides* dominates, creating mats in shallow water or over wet soil. Other aquatic plants such as *Azolla*, *Lemna*, *Myriophyllum aquaticum*, *Polygonum*, and *Sparganium* may be present.

Local Environmental Description

Elevation: Mean 103 m, Range 60 – 143 m

Aspect: Flat (3)

Eleocharis (acicularis, macrostachya) Herbaceous Alliance

Common Name: Needle spike rush and pale spike rush marshes

NVC Alliance Code: A3807. *Eleocharis palustris* - *Eleocharis acicularis* Marsh Alliance

Statewide Description

Sawyer et al. (2009) treated *Eleocharis acicularis* and *E. macrostachya* in separate alliances, however a recent peer review panel of the NVC has determined that these species should be merged into a single alliance due to similar ecological conditions and overlapping species. The treatment below incorporates these new changes.

Eleocharis acicularis and/or *E. macrostachya* dominate or co-dominate in the herbaceous layer with *Agrostis stolonifera*, *Alopecurus geniculatus*, *Argentina egedii*, *Arnica chamissonis*, *Carex* spp., *Damasonium californicum*, *Deschampsia danthonioides*, *Eleocharis acicularis*, *Eleocharis macrostachya*, *Epilobium pallidum*, *Epilobium pygmaeum*, *Eryngium alismifolium*, *Eryngium aristulatum*, *Eryngium castrense*, *Eryngium mathiasiae*, *Eryngium vaseyi*, *Isoetes howellii*, *Juncus arcticus*, *Juncus nevadensis*, *Lasthenia glaberrima*, *Lemna minuta*, *Lolium perenne*, *Marsilea vestita*, *Mimulus guttatus*, *Muhlenbergia filiformis*, *Nasturtium officinale*, *Navarretia intertexta*, *Navarretia leucocephala*, *Paspalum dilatatum*, *Perideridia parishii*, *Plagiobothrys mollis*, *Polygonum* spp., *Psilocarphus oregonus*, *Ranunculus aquatilis*, *Ranunculus muricatus*, and *Trifolium wormskioldii*.

Eleocharis acicularis and *E. macrostachya* occur separately or together in a variety of
Eleocharis (acicularis, macrostachya) Herbaceous Alliance

temporarily flooded or saturated sites in California. S. Smith (1998) described stands of *E. acicularis* co-dominant with other early-seral herbs, resulting from long-term grazing and natural disturbance. However, Klein et al. (2007) found stable, vernal moist *Eleocharis acicularis* stands in locations without major disturbances. A related type is the *Eleocharis acicularis* sub-association of the *Downingia insignis* – *Psilocarphus brevissimus*

Association, which is found in alkaline claypan vernal pools in the Solano–Colusa region (Barbour et al. 2007b). *Eleocharis macrostachya* grows in many seasonally flooded habitats including vernal pools, brackish marshes, ponds, shallow lakes, stream sides, and wet meadows. *Eleocharis macrostachya* stands exist throughout much of the western United States and central Great Plains at elevations from sea level to alpine in shallow wetlands with slowed water or in ponds (NatureServe 2007a, Smith et al. 2002).

Local Vegetation Description

The Needle spike rush and pale spike rush marshes Alliance forms an open to continuous herbaceous layer. The shrub layer is absent and the tree layer is absent. Those herbs often present include *Eleocharis macrostachya*, and herbs that are sometimes present include *Cyperus eragrostis*, *Holcus lanatus*, *Juncus bufonius*, *Juncus patens*, *Juncus phaeocephalus*, *Leontodon taraxacoides*, *Lolium perenne*, *Lotus* spp., *Lythrum hyssopifolium*, *Mentha pulegium*, *Picris echioides*, *Polypogon monspeliensis*, and *Rumex crispus*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	0.0	0 – 0	no data	no data
Hardwood	0.0	0 – 0	no data	no data

***Eriophyllum staechadifolium* – *Erigeron glaucus* – *Eriogonum latifolium* Herbaceous Alliance**

Common Name: Seaside woolly-sunflower - seaside daisy - buckwheat patches

NVC Alliance Code: A1614. *Abronia latifolia* - *Ambrosia chamissonis* Dune Grassland Alliance

Statewide Description

Artemisia pycnocephala, *Erigeron glaucus*, *Eriogonum latifolium*, *Eriogonum parvifolium*, *Eriophyllum staechadifolium* and/or *Fragaria chiloensis* mix with herbaceous species such as *Achillea millefolium*, *Angelica hendersonii*, *Armereria maritima*, *Bromus carinatus*, *Bromus maritimus*, *Camissonia cheiranthifolia*, *Cardionema ramosissimum*, *Carpobrotus edulis*, *Daucus pusillus*, *Dudleya farinosa*, *Dudleya* spp., *Grindelia stricta*, or *Poa douglasii*. Emergent shrubs may be present including *Baccharis pilularis*, *Lupinus arboreus*, *Lupinus versicolor*, or *Rubus ursinus*.

This alliance occupies a narrow band along the immediate coast of California. It typically occurs on rocky or sandy soils of California coastal strand along the North Coast and Central Coast, although occurrences of the diagnostic taxa are known along the Pacific Coast found from San Diego County to central Oregon. Stands occur on inner dunes to steep slopes above dunes inland from the leading edge of the beach; they are distinct from those of the *Abronia latifolia* - *Ambrosia chamissonis* Alliance which is found on more active dune surfaces. Stands of this alliance are rarely impacted

by saltwater overwash from storm events. However, reflective dune sand and steep coastal bluffs can have high temperatures in full sunlight. Dry sand is mobile so plants can be damaged by sand blast, root exposure, and foliage burial under the shifting sands. Additionally, beach sand has low water storage capacity and is nutrient poor and lacking in organic matter. Summer fog ameliorates surface conditions to some degree (Pickart and Barbour 2007).

Species composition of this alliance is richer on the inner dunes and coastal bluffs than the related *Abronia latifolia* - *Ambrosia chamissonis* Alliance because of somewhat decreased salt spray yet wind intensity may vary depending on setting. Vegetation is generally short or mounded in stature due to environmental factors such as intense winds, fluctuation in and/or high temperatures, salt spray, and sand/sandstone movement. Stands are primarily composed of perennial herbs and subshrubs but some may have woody species such as *Baccharis pilularis*, *Lupinus arboreus*, *L. variicolor*, and *Rubus ursinus*.

Species dominance shifts spatially and temporally in coastal environments and dune ecosystems because environmental conditions create fine-scale vegetation patterning, in which stands of this alliance are often adjacent to stands of the *Abronia latifolia* - *Ambrosia chamissonis*, *Lupinus arboreus*, or *Lupinus chamissonis* - *Ericameria ericoides* alliances. The *Eriophyllum staechadifolium* - *Erigeron glaucus* - *Eriogonum latifolium* alliance is defined following surveys of coastal stands from Mendocino to Santa Barbara county. Stands dominated by *Artemisia pycnocephala* were previously considered as various associations of the *Abronia latifolia* - *Ambrosia chamissonis* dune mat alliance, depending on the codominant species, but have now been included in this more recently defined dune mat alliance.

Local Vegetation Description

The Seaside woolly-sunflower - seaside daisy - buckwheat patches Alliance forms an open to continuous herbaceous layer. The shrub layer is open to continuous and the tree layer is absent. Characteristic herbs include *Achillea millefolium*. Those herbs often present include *Bromus maritimus*, *Carpobrotus edulis*, *Daucus pusillus*, *Erigeron glaucus*, *Eriogonum latifolium*, *Eriophyllum stoechadifolium*, and *Fragaria chiloensis*, and herbs that are sometimes present include *Ambrosia chamissonis*, *Anagallis arvensis*, *Angelica hendersonii*, *Artemisia pycnocephala*, *Camissonia cheiranthifolia*, *Chlorogalum pomeridianum*, *Dudleya caespitosa*, *Dudleya farinosa*, *Eschscholzia californica*, *Gamochaeta ustulata*, *Grindelia stricta*, *Hypochaeris radicata*, *Iris douglasiana*, *Madia sativa*, *Plantago lanceolata*, *Pseudognaphalium stramineum*, *Pterostegia drymarioides*, *Scrophularia californica*, *Sidalcea malviflora*, *Sonchus asper*, *Sonchus oleraceus*, and *Vulpia bromoides*. Commonly associated emergent shrubs include *Baccharis pilularis*.

Site Impacts

This alliance has low non-native plant cover (average 14.5%) relative to native cover. Non-native species that occur with highest frequency and abundance include *Anagallis arvensis*, *Carpobrotus edulis*, *Hypochaeris radicata*, *Plantago lanceolata*, *Sonchus asper*, *Sonchus oleraceus*, and *Vulpia bromoides*.

Associations in San Mateo County

- *Artemisia pycnocephala*
- *Erigeron glaucus* – *Fragaria chiloensis* *Eriogonum parvifolium*

- *Eriophyllum staechadifolium* – *Eriogonum latifolium*

***Artemisia pycnocephala* Association**

Common Name: Beach Wormwood Patches

Alliance: *Eriophyllum staechadifolium* – *Erigeron glaucus* – *Eriogonum latifolium*
Herbaceous Alliance

Local Vegetation Description

The Beach Wormwood Association forms an open to intermittent herbaceous layer. The shrub layer is sparse to open and the tree layer is absent. The dominant herbs is *Artemisia pycnocephala*, and characteristic herbs include *Abronia latifolia*, *Ambrosia chamissonis*, *Camissonia cheiranthifolia*, *Carpobrotus edulis*, *Eriogonum latifolium*, and *Fragaria chiloensis*. Those herbs often present include *Achillea millefolium*, *Cakile maritima*, *Claytonia perfoliata*, *Cryptantha leiocarpa*, *Daucus pusillus*, and *Eriophyllum stoechadifolium*, and herbs that are sometimes present include *Bromus maritimus*, *Dudleya farinosa*, *Elymus mollis*, *Pseudognaphalium stramineum*, and *Vulpia myuros*. Commonly associated emergent shrubs at sparse cover include *Baccharis pilularis* and *Lupinus arboreus*.

Erigeron glaucus – Fragaria chiloensis Association

Eriophyllum staechadifolium – Erigeron glaucus – Eriogonum latifolium Herbaceous Alliance

***Eriogonum parvifolium* Provisional Association**

Common Name: Seacliff Wild Buckwheat Patches

Alliance: *Eriophyllum staechadifolium* – *Erigeron glaucus* – *Eriogonum latifolium* Herbaceous Alliance

Local Vegetation Description

The Seacliff Wild Buckwheat Association forms a continuous shrub layer in the single survey available. The tree layer is absent and the herb layer is open. The dominant shrub is *Eriogonum parvifolium*. Other shrubs present are *Artemisia californica*, *Baccharis pilularis*, *Lupinus versicolor*, and *Rubus ursinus*.

Dominant herbs include *Eriophyllum stoechadifolium*, and characteristic herbs include *Achillea millefolium*, *Bromus maritimus*, *Carpobrotus edulis*, *Chlorogalum pomeridianum*, *Daucus pusillus*, *Dudleya caespitosa*, *Erigeron glaucus*, *Fragaria chiloensis*, *Gamochaeta ustulata*, *Hirschfeldia incana*, *Iris douglasiana*, *Lotus wrangelianus*, *Madia sativa*, *Polypodium californicum*, *Raphanus sativus*, and *Sidalcea malviflora*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range

Hardwood	0.0	NA	no data	no data
Regenerating or Shrubby Tree	0.0	NA	no data	no data
Shrub	80.0	NA	0.8	0.5 – 1
Herb	5.0	NA	0.3	0 – 0.5

Local Environmental Description

Elevation: 26 m

Aspect: SW (1)

Slope: 37 degrees

Macro Topography: Middle 1/3 of slope (1)

Large Rock: 0.0%

Fines Cover: 2.2%

Small Rock: 5.0%

Litter Cover: 90%

Soil Texture (field assessed): Medium to very fine, sandy loam (1)

Geology (field or map data): Sedimentary (type unknown) (1)

San Mateo County Watersheds: Pacifica (1)

Site Impacts

This association has low non-native plant cover (average 6.0%) relative to native

cover. Non-native species that occur with highest frequency and abundance include *Carpobrotus edulis*, *Hirschfeldia incana*, and *Raphanus sativus*.

Classification Comments

This association is considered provisional since it is under-sampled in its expected range. This name has been used in previous vegetation mapping projects, but has been newly inducted into the MCV.

Eriophyllum staechadifolium – Eriogonum latifolium Association

Eriophyllum staechadifolium – Erigeron glaucus – Eriogonum latifolium Herbaceous Alliance

***Festuca idahoensis* – *Danthonia californica* Herbaceous Alliance**

Common Name: Idaho fescue - California oatgrass grassland

NVC Alliance Code: A4210. *Festuca idahoensis* ssp. *roemerii* - *Danthonia californica*
Interior Prairie, Bald & Bluff Grassland Alliance

Statewide Description

Danthonia californica, *Festuca idahoensis* and/or *Festuca rubra* is dominant or co-dominant in the herbaceous layer with *Achillea millefolium*, *Aira caryophyllea*, *Anagallis arvensis*, *Bromus hordeaceus*, *Chlorogalum pomeridianum*, *Cynosurus echinatus*, *Hypochaeris radicata*, *Koeleria macrantha*, *Lolium perenne* ssp. *multiflorum*, *Nassella pulchra*, *Plantago lanceolata*, *Rumex acetosella*, *Sisyrinchium bellum* and *Vulpia bromoides*. Emergent trees or shrubs may be present at low cover, including *Baccharis pilularis*, *Elymus glaucus*, *Pseudotsuga menziesii*, *Rubus ursinus*, or *Toxicodendron diversilobum*.

Although these three character species exist in a variety of habitats across California, this alliance describes coastal prairie grasslands along the central coast and in northwestern California. On the North Coast (north of Marin County), this coastal prairie occurs in two settings: terrace prairie along the coastline at low and maritime elevations, and bald hills prairie on inland ridges and hilltops. In either phase, shrubs and trees are generally absent. Native perennial bunchgrasses mix with annual and

Festuca idahoensis – *Danthonia californica* Herbaceous Alliance

perennial forbs creating a colorful display in late spring (Ornduff et al. 2003).

Local Vegetation Description

The Idaho fescue - California oatgrass grassland Alliance forms an intermittent to continuous herbaceous layer. The shrub layer is open and the tree layer is open. Characteristic herbs include *Danthonia californica* and *Vulpia bromoides*. Those herbs often present include *Aira caryophyllea*, *Avena* spp., *Bromus hordeaceus*, *Geranium dissectum*, *Lolium perenne*, *Rumex acetosella*, and *Sisyrinchium bellum*, and herbs that are sometimes present include *Achillea millefolium*, *Anagallis arvensis*, *Brachypodium distachyon*, *Briza maxima*, *Briza minor*, *Bromus carinatus*, *Bromus diandrus*, *Chlorogalum pomeridianum*, *Cirsium vulgare*, *Clarkia rubicunda*, *Cynosurus echinatus*, *Elymus glaucus*, *Erodium cicutarium*, *Eschscholzia californica*, *Festuca idahoensis*, *Holcus lanatus*, *Hypochaeris radicata*, *Juncus* spp., *Koeleria macrantha*, *Linum bienne*, *Lotus corniculatus*, *Nassella pulchra*, *Phalaris aquatica*, *Plantago erecta*, *Plantago lanceolata*, *Pteridium aquilinum*, *Sidalcea malviflora*, *Silene gallica*, *Sonchus asper*, *Trifolium dubium*, *Vicia sativa*, and *Vulpia microstachys*. Commonly associated emergent shrubs include *Baccharis pilularis*. Commonly associated non-vascular plants include Moss.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	0.3	0 – 7	no data	no data
Hardwood	1.0	0 – 4	1.5	1 – 2
Regenerating or Shrubby Tree	0.0	0 – 0.2	no data	no data
Shrub	4.3	0.2 – 10	0.4	0 – 1
Herb	73.0	60 – 85	0.4	0 – 1

Local Membership Rule

Festuca idahoensis, *F. rubra* and/or *Danthonia californica* dominate or characterize stands. *Bromus carinatus*, *Elymus glaucus*, *Nassella pulchra*, *Plantago erecta*, and a variety of native and non-native forbs and grasses may intermix as sub-dominants. *Festuca*, *Danthonia* or *Perideridia kelloggii* and other native species share at least 10% relative cover in the herb layer, with other non-native grasses and forbs sometimes having higher cover (e.g., *Cynosurus echinatus*, *Hypochaeris radicata*, and *Vulpia bromoides*). Occasionally, the larger *Festuca californica* may replace *F. idahoensis* in somewhat shadier or less exposed sites.

Local Environmental Description

Elevation: Mean 238 m, Range 18 – 766 m

Aspect: NW (7), SW (4), W (4), SE (3), NE (3), N (2), Flat (1), S (1)

Slope: Mean 10 degrees, Range 0 – 35 degrees

Danthonia californica – Nassella pulchra Association
Festuca idahoensis – Danthonia californica Herbaceous Alliance

***Danthonia californica* Coastal Association**

Common Name: California Oatgrass Valley Grassland Patches

Alliance: *Festuca idahoensis* – *Danthonia californica* Herbaceous Alliance

Local Vegetation Description

The California Oatgrass Valley Grassland Association forms a continuous herbaceous layer. The shrub layer is open and the tree layer is sparse. Dominant herbs include *Danthonia californica*, and characteristic herbs include *Bromus hordeaceus*, *Geranium dissectum*, *Holcus lanatus*, *Lolium perenne*, and *Vulpia bromoides*. Those herbs often present include *Aira caryophyllea*, *Anagallis arvensis*, *Avena* spp., *Brachypodium distachyon*, *Briza minor*, *Bromus diandrus*, *Cirsium vulgare*, *Hypochoeris radicata*, *Linum bienne*, *Lotus corniculatus*, *Phalaris aquatica*, *Plantago lanceolata*, *Rumex acetosella*, *Sisyrinchium bellum*, and *Vicia sativa*. Commonly associated emergent shrubs at sparse cover include *Baccharis pilularis*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	0.6	0 – 7	no data	no data
Hardwood	0.3	0 – 4	no data	no data
Regenerating or Shrubby Tree	0.0	0 – 0	no data	no data
Shrub	4.2	0 – 12	0.3	0 – 0.5
Herb	81.5	78 – 85	0.3	0 – 0.5

Local Environmental Description

Elevation: Mean 141 m, Range 18 – 577 m

Aspect: NW (2), SE (2), SW (2), Flat (1), N (1)

Slope: Mean 6 degrees, Range 0 – 19 degrees

Macro Topography: Upper 1/3 of slope (3), Middle 1/3 of slope (2), Other (2), Bottom to Lower 1/3 of slope (1)

Large Rock: 0.0%

Small Rock: Mean 0.3%, Range 0.0 – 2.2%

Fines Cover: Mean 30.0%, Range 0.2 – 64.5%

Litter Cover: Mean 26.7%, Range 0.2 – 92%

Soil Texture (field assessed): Moderately coarse, sandy loam (1), Moderately fine clay loam (1)

Geology (field or map data): Alluvium (4), Sandstone and other sedimentary (4), Sandstone, shale, and conglomerate (3), Shale and other sedimentary (1), Granitic (generic) (1)

San Mateo County Watersheds: Ano Nuevo (6), Pescadero Creek (3), Palo Alto (2), Pacifica (1), Tunitas Creek (1)

Site Impacts

This association has greater cover of non-native (average 52.9%) than native. Non-native species that occur with highest frequency and abundance include *Aira caryophyllea*, *Anagallis arvensis*, *Avena* spp., *Brachypodium distachyon*, *Briza maxima*, *Briza minor*, *Bromus diandrus*, *Bromus hordeaceus*, *Cirsium vulgare*, *Crepis vesicaria*, *Cynosurus echinatus*, *Geranium dissectum*, *Holcus lanatus*, *Hypochaeris radicata*, *Linum bienne*, *Lolium perenne*, *Lotus corniculatus*, *Parentucellia viscosa*, *Phalaris aquatica*, *Picris echioides*, *Plantago lanceolata*, *Rumex acetosella*, *Sonchus asper*, *Trifolium angustifolium*, *Trifolium dubium*, *Trifolium subterraneum*, *Vicia sativa*, *Vicia tetrasperma*, *Vicia villosa*, and *Vulpia bromoides*.

Classification Comments

This new association name, first used for Marin County, merges previously used concepts *Danthonia californica* – *Aira caryophyllea* and *Danthonia californica* – (*Briza maxima* – *Vulpia bromoides*) Associations.

Festuca idahoensis – *Nassella pulchra* Provisional Association
Festuca idahoensis – *Danthonia californica* Herbaceous Alliance

***Perideridia kelloggii* – *Danthonia californica* Provisional Association**

Common Name: Yampah – Creeping Ryegrass Patches

Alliance: *Festuca idahoensis* – *Danthonia californica* Herbaceous Alliance

Local Vegetation Description

The Yampah – Creeping Ryegrass Association forms an intermittent to continuous herbaceous layer. The shrub layer is absent and the tree layer is absent. Dominant herbs include *Lolium perenne* and *Perideridia kelloggii*, and characteristic herbs include *Chlorogalum pomeridianum*, *Danthonia californica*, *Lactuca saligna*, *Lotus wrangelianus*, *Ranunculus californicus*, *Sisyrinchium bellum*, and *Triteleia laxa*.

Those herbs often present include *Carex serratodens*, *Castilleja rubicundula* ssp. *lithospermoides*, *Deschampsia danthonioides*, *Elymus glaucus*, *Elymus trachycaulus*, *Hemizonia congesta*, *Hordeum brachyantherum*, *Hypochaeris radicata*, *Juncus bufonius*, *Juncus phaeocephalus*, *Lasthenia californica*, *Madia elegans*, *Microseris douglasii*, *Mimulus guttatus*, *Sidalcea diploscypha*, *Trifolium microdon*, *Trifolium willdenovii*, *Vulpia bromoides*, and *Vulpia microstachys*.

Local Environmental Description

Elevation: Mean 142 m, Range 140 – 143 m

Aspect: NE (1)

Slope: 5 degrees

Macro Topography: Middle 1/3 of slope (1)

Large Rock: 0.0%

Small Rock: Mean 0.5%, Range 0.0 – 1.0%

Fines Cover: Mean 3.0%, Range 1.0 – 5.0%

Litter Cover: Mean 57.5%, Range 35.0 – 80%

Soil Texture (field assessed): Clay, (class unknown) (1), Moderately fine silty clay loam (1)

Geology (field or map data): Franciscan melange (1), Serpentine (1)

San Mateo County Watersheds: San Mateo Bayside (1)

Other Watersheds, Marin Co.: San Rafael (1)

Site Impacts

This association has moderate non-native plant cover (average 32.7%) relative to native cover. Non-native species that occur with highest frequency and abundance include *Hypochaeris radicata*, *Lactuca saligna*, *Lolium perenne*, and *Vulpia bromoides*.

Classification Comments

This association is considered provisional since it is under-sampled in its expected range. It was newly described for Marin County. Since the number of surveys of this association in San Mateo County are low, data from nearby counties were included.

Perideridia kelloggii – *Danthonia californica* Provisional Association
Festuca idahoensis – *Danthonia californica* Herbaceous Alliance

***Grindelia (stricta)* Herbaceous Provisional Alliance**

Common Name: Gum plant patches

NVC Alliance Code: A4179. *Grindelia stricta* - *Grindelia* sp. Wet Mudflat Alliance

Statewide Description

Grindelia stricta or another *Grindelia* species is dominant in the herbaceous layer with *Distichlis spicata*, *Frankenia salina*, *Jaumea carnosa*, *Juncus arcticus*, *Limonium californicum*, *Sarcocornia pacifica* and *Triglochin maritima*.

G. stricta and subspecies of *G. stricta* are assigned to the same alliance. *Grindelia stricta* appears to be broadly tolerant of salt or brackish conditions, as in salt marsh edges or along coastal bluffs or stabilized coastal dunes.

Local Vegetation Description

The Gum plant patches Alliance forms an intermittent to continuous herbaceous layer. The shrub layer is absent to sparse and the tree layer is absent. Dominant herbs include *Grindelia stricta*. Those herbs often present include *Distichlis spicata*, *Jaumea carnosa*, *Potentilla anserina*, and *Sarcocornia pacifica*, and herbs that are sometimes present include *Atriplex prostrata*, *Avena* spp., *Beta vulgaris*, *Cuscuta salina*, and *Polypogon monspeliensis*.

Lifeform	Cover (%)	Cover (%)	Height (m)	Height (m)
----------	-----------	-----------	------------	------------

	Mean	Range	Mean	Range
Conifer	0.0	0 – 0	no data	no data
Hardwood	0.0	0 – 0	no data	no data
Regenerating or Shrubby Tree	0.0	0.0 – 0.0	no data	no data
Shrub	0.0	0.0 – 0.2	0.8	0.5 – 1
Herb	72.5	60 – 80	0.9	0 – 2

Local Membership Rule

Grindelia stricta dominates or co-dominates with natives such as *Sarcocornia pacifica*, *Distichlis spicata*, and/or *Frankenia salina* or non-native herbs such as *Polypogon monspeliensis*, *Rumex crispus*, and *Bromus diandrus*. Stands may be found on slightly elevated or drier ground adjacent to salt or alkaline marshes, tidal flats, levees, and road margins.

Local Environmental Description

Elevation: Mean 4 m, Range 0 – 11 m

Aspect: Flat (4), NW (1), SE (1)

Slope: Mean 1 degrees, Range 0 – 4 degrees

Macro Topography: Bottom (5), Lower 1/3 of slope (1)

Large Rock: Mean 0.2%, Range 0.0 – 1.0%

Small Rock: Mean 0.7%, Range 0.0 – 4.0%

Fines Cover: Mean 45.8%, Range 2.0 – 77.0%

Litter Cover: Mean 48.0%, Range 20.0 – 93%

Soil Texture (field assessed): Muck (4), Fine clay (1), Moderately fine clay loam (1)

Geology (field or map data): Clayey alluvium (2), Mixed alluvium (2), Silty alluvium (1)

San Mateo County Watersheds: Pescadero Creek (2), San Mateo Bayside (2), Palo Alto (1), San Gregorio Creek (1)

Site Impacts

This alliance has low non-native plant cover (average 11.6%) relative to native cover. Non-native species that occur with highest frequency and abundance include *Atriplex prostrata*, *Beta vulgaris*, and *Polypogon monspeliensis*.

***Holcus lanatus – Anthoxanthum odoratum* Herbaceous Semi-Natural Alliance**

Common Name: Common velvet grass – sweet vernal grass meadows

NVC Alliance Code: A2063. *Anthoxanthum odoratum - Holcus lanatus* Ruderal Coastal Grassland Alliance

Statewide Description

Anthoxanthum odoratum and/or *Holcus lanatus* dominate or co-dominate in the herbaceous layer with *Anagallis arvensis*, *Anthoxanthum odoratum*, *Briza maxima*, *Cirsium vulgare*, *Hypochaeris radicata*, *Plantago lanceolata*, *Rumex acetosella*, and *Vulpia bromoides*.

Stands of *Holcus lanatus – Anthoxanthum odoratum* are similar to those of *Agrostis stolonifera – Festuca arundinacea*; however, the latter species occur in wetter and more brackish sites of managed wetlands (Pickart 2006). Both *H. lanatus* and *A. odoratum* occur along coastal terraces and moist pastures in central and northern California. Both plants particularly invade stands of the *Calamagrostis nutkaensis*, *Carex obnupta*, *Danthonia californica*, *Deschampsia cespitosa*, and *Hordeum brachyantherum* Alliances (CNPS 2005, Ford and Hayes 2007, Heady et al. 1977, Keeler-Wolf et al. 2003a).

Holcus lanatus is a recent invader, now dominating many coastal prairies of California. It has a high capacity for rapid vegetative growth in open areas, but it has a disadvantage against taller natives that create shaded conditions (Grime 1979).

Holcus lanatus – Anthoxanthum odoratum Herbaceous Semi-Natural Alliance

Local Vegetation Description

The Common velvet grass – sweet vernal grass meadows Alliance forms an intermittent to continuous herbaceous layer. The shrub layer is open and the tree layer is sparse. Dominant herbs include *Holcus lanatus*. Those herbs often present include *Cirsium vulgare*, *Lolium perenne*, and *Rumex acetosella*, and herbs that are sometimes present include *Achillea millefolium*, *Anagallis arvensis*, *Bromus hordeaceus*, *Carex* spp., *Conium maculatum*, *Cynosurus echinatus*, *Geranium dissectum*, *Hordeum brachyantherum*, *Hypochaeris radicata*, *Iris douglasiana*, *Juncus patens*, *Juncus phaeocephalus*, *Plantago lanceolata*, *Silene gallica*, *Silybum marianum*, *Sisyrinchium bellum*, *Stachys ajugoides*, *Vicia sativa*, and *Vulpia bromoides*. Commonly associated emergent shrubs include *Baccharis pilularis*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	0.3	0 – 5	no data	no data

***Holcus lanatus* Semi-natural Association**

Common Name: Common velvet grass Patches

Alliance: *Holcus lanatus – Anthoxanthum odoratum* Herbaceous Semi-Natural Alliance

Local Vegetation Description

The Common velvet grass Association forms a continuous herbaceous layer in the single sample available. The shrub layer is absent and the tree layer is absent.

Dominant herbs include *Holcus lanatus*. Those herbs often present include *Cirsium vulgare*, *Lolium perenne*, and *Rumex acetosella*, and herbs that are sometimes present include *Achillea millefolium*, *Anagallis arvensis*, *Bromus hordeaceus*, *Carex* spp., *Conium maculatum*, *Cynosurus echinatus*, *Geranium dissectum*, *Hordeum brachyantherum*, *Hypochaeris radicata*, *Iris douglasiana*, *Juncus patens*, *Juncus phaeocephalus*, *Plantago lanceolata*, *Silene gallica*, *Silybum marianum*, *Sisyrinchium bellum*, *Stachys ajugoides*, *Vicia sativa*, and *Vulpia bromoides*.

***Juncus (effusus, patens) – Carex (pansa, praegracilis)* Herbaceous Alliance**

Common Name: Soft and western rush – sedge marshes

NVC Alliance Code: A3822. *Carex obnupta* Wet Meadow Alliance

Statewide Description

Juncus effusus, *J. patens*, *Carex pansa*, *C. praegracilis*, or *C. serratodens* dominate in the herbaceous layer with *Achillea millefolium*, *Argentina egedii*, *Artemisia pycnocephala*, *Briza maxima*, *Bromus tectorum*, *Camissonia cheiranthifolia*, *Cardionema ramosissimum*, *Carex* spp., *Carpobrotus chilensis*, *Cirsium vulgare*, *Epilobium ciliatum*, *Erigeron glaucus*, *Helminthotheca echooides*, *Holcus lanatus*, *Juncus arcticus*, *Juncus bufonius*, *Juncus lescurii*, *Juncus phaeocephalus*, *Lactuca serriola*, *Lolium perenne*, *Lotus* spp., *Luzula comosa*, *Plantago* spp., *Poa douglasii*, *Pteridium aquilinum*, *Senecio minimus*, *Trifolium* spp., *Typha latifolia*, and *Urtica dioica*. Emergent shrubs may be present at low cover, including *Baccharis pilularis*, *Lotus scoparius*, or *Rubus armeniacus*.

Several *Juncus* species overlap ecologically in moist coastal terraces, seeps, and pond edges along the northern and central coast of California. *Juncus effusus* and *J. patens* overlap geographically and tend to be the most common stand formers, perhaps due to their tolerance of relatively heavy cattle browsing.

However, *Juncus phaeocephalus*, *J. occidentalis*, and other *Juncus* species may also occur in similar settings.

Stands of various *Juncus* spp. and *Carex* spp. occur scattered across California in wetland flats and depressions. Ecological relationships with other caespitose to somewhat rhizomatous rushes and sedges along the coast appear close, therefore the species which were previously treated in separate alliances have been combined along with other rushes and sedges.

Local Vegetation Description

The Soft and western rush – sedge marshes Alliance forms an intermittent to continuous herbaceous layer. The shrub layer is open and the tree layer is absent. Those herbs often present include *Carex subbracteata*, *Cirsium vulgare*, *Holcus lanatus*, *Juncus effusus*, *Juncus patens*, and *Picris echioides*, and herbs that are sometimes present include *Aira caryophyllea*, *Anagallis arvensis*, *Avena* spp., *Briza minor*, *Bromus hordeaceus*, *Centaurium muehlenbergii*, *Conium maculatum*, *Cyperus eragrostis*, *Eleocharis macrostachya*, *Elymus triticoides*, *Epilobium ciliatum*, *Geranium dissectum*, *Hypochaeris radicata*, *Iris douglasiana*, *Juncus arcticus*, *Juncus bufonius*, *Juncus phaeocephalus*, *Linum bienne*, *Lolium perenne*, *Lotus corniculatus*, *Lythrum hyssopifolium*, *Mentha pulegium*, *Myosotis discolor*, *Parentucellia viscosa*, *Phalaris aquatica*, *Potentilla anserina*, *Rumex acetosella*, *Rumex crispus*, *Rumex salicifolius*, *Sonchus asper*, *Symphytum chilense*, *Trifolium angustifolium*, *Vicia sativa*, and *Vicia tetrasperma*. Commonly associated emergent shrubs include *Baccharis pilularis* and *Rubus ursinus*.

Juncus effusus Association
Juncus (effusus, patens) – *Carex (pansa, praegracilis)* Herbaceous Alliance

Juncus phaeocephalus Association

Common Name: Brown-headed rush Patches

Alliance: *Juncus (effusus, patens)* – *Carex (pansa, praegracilis)* Herbaceous Alliance

Local Vegetation Description

The Brown-headed rush Association forms an intermittent to continuous herbaceous layer. The shrub layer is sparse and the tree layer is absent. Dominant herbs include *Juncus phaeocephalus*. Those herbs often present include *Briza minor*, *Holcus lanatus*, *Juncus bufonius*, and *Lolium perenne*, and herbs that are sometimes present include *Anagallis arvensis*, *Bromus hordeaceus*, *Carex* spp., *Carex densa*, *Carex obnupta*, *Cirsium vulgare*, *Cynosurus echinatus*, *Danthonia californica*, *Eryngium armatum*, *Geranium dissectum*, *Hypochaeris radicata*, *Iris douglasiana*, *Juncus patens*, *Leontodon taraxacoides*, *Lotus corniculatus*, *Lythrum hyssopifolium*, *Mentha pulegium*, *Plantago lanceolata*, *Potentilla anserina*, *Rumex acetosella*, *Rumex pulcher*, *Trifolium dubium*, *Trifolium wormskiioldii*, and *Vulpia bromoides*.

***Lasthenia californica – Plantago erecta – Vulpia microstachys* Herbaceous Alliance**

Common Name: California goldfields – dwarf plantain – small fescue flower fields

NVC Alliance Code: A4153. *Lasthenia californica - Plantago erecta - Vulpia microstachys* Meadow Alliance

Statewide Description

Lasthenia californica, *Plantago erecta*, and/or *Vulpia microstachys* are dominant individually or co-dominant in the herbaceous layer with *Achillea millefolium*, *Achnatherum lemmontii*, *Agrostis elliotiana*, *Avena barbata*, *Bromus hordeaceus*, *Calycadenia multiglandulosa*, *Calycadenia truncata*, *Castilleja exserta*, *Chlorogalum pomeridianum*, *Cryptantha flaccida*, *Eriogonum nudum*, *Eschscholzia californica*, *Hemizonia congesta*, *Hesperevax sparsiflora*, *Lasthenia* spp., *Lepidium nitidum*, *Lessingia* spp., *Lolium perenne*, *Lomatium utriculatum*, *Lotus wrangelianus*, *Lupinus nanus*, *Lupinus spectabilis*, *Microseris douglasii*, *Mimulus guttatus*, *Minuartia douglasii*, *Muilla maritima*, *Nassella pulchra*, *Navarretia tagetina*, *Pentagramma triangularis*, *Platystemon californicus*, *Sanicula bipinnatifida*, *Sedella pumila*, *Selaginella hansenii*, *Sidalcea diploscypha*, *Sisyrinchium bellum*, and *Trifolium* spp.

Stands of the *Lasthenia californica – Plantago erecta – Vulpia microstachys* Alliance occur throughout much of cismontane California (Bartolome et al. 2007a, Evens and San 2004, Hobbs and Mooney 1991, Klein et al. 2007, McCarten 1991, Rodriguez-Rojo et al. 2001a, 2001b, Weiss 1999). This alliance represents a triad of native species that

have a broad adaptation to the area's Mediterranean climate.

Bartolome et al. (2007a) suggested that native annual grassland types replace steppe types wherever annual rainfall is less than 21 cm. *Vulpia microstachys* var. *pauciflora* is the most frequent annual grass of these semi-desert grasslands.

This alliance appears to be seasonally abundant on infertile soils of less frequent disturbance, whereas other herbaceous stands with more disturbance-related taxa appear more regularly on deeper and disturbed soils (cf. Hobbs and Mooney 1991, Seabloom et al. 2003, Howard 2006). Adaptation to local site/soil conditions allows these native species to dominate on serpentine soils (Espeland and Rice 2007, Howard 2006, Rajakaruna and Bohm 1999). The three species commonly co-occur, though in some areas only one or two may predominate.

Local Vegetation Description

The California goldfields – dwarf plantain – small fescue flower fields Alliance forms an open to continuous herbaceous layer. The shrub layer is open and the tree layer is sparse or absent. Characteristic herbs include *Lasthenia californica*. Those herbs often present include *Eschscholzia californica*, *Lolium perenne*, and *Plantago erecta*, and herbs that are sometimes present include *Achillea millefolium*, *Avena* spp., *Bromus hordeaceus*, *Calycadenia multiglandulosa*, *Calystegia subacaulis*, *Carduus pycnocephalus*, *Castilleja densiflora*, *Chlorogalum pomeridianum*, *Cirsium quercetorum*, *Clarkia rubicunda*, *Claytonia perfoliata*, *Dichelostemma capitatum*, *Elymus multiseta*, *Eriogonum latifolium*, *Eriogonum nudum*, *Grindelia stricta*, *Hemizonia congesta*, *Hesperevax sparsiflora*, *Leptosiphon parviflorus*, *Lotus wrangelianus*, *Lupinus nanus*, *Nassella pulchra*, *Plantago lanceolata*, *Poa secunda*, *Poa unilateralis*, *Polypodium californicum*, *Rumex acetosella*, *Sidalcea malviflora*, *Trifolium* spp., and *Trifolium willdenovii*.

Local Membership Rule

Lasthenia californica, *Calycadenia* spp., *Hemizonia congesta*, *Hesperevax sparsiflora*, *Lomatium*, *Lotus humistratus*, *Micropus californicus*, *Plantago erecta*, and/or *Vulpia microstachys* dominate individually or in combination in the herbaceous layer.

Lasthenia californica, *Plantago erecta*, and/or *Vulpia microstachys* are often present, sometimes with sparse cover.

Local Environmental Description

Elevation: Mean 209 m, Range 38 – 587 m

Aspect: NE (4), SW (2), NW (1)

Slope: Mean 18 degrees, Range 2 – 35 degrees

Macro Topography: Upper 1/3 of slope to Ridgetop (2), Upper 1/3 of slope (2), Middle 1/3 of slope (2), Ridge top (1)

Large Rock: Mean 10.7%, Range 0.0 – 53.0%

Small Rock: Mean 10.1%, Range 0.0 – 32.0%

Fines Cover: Mean 44.3%, Range 13.0 – 81.0%

Litter Cover: Mean 28.7%, Range 1.0 – 60%

Soil Texture (field assessed): Fine sandy clay (1), Medium silt (1), Moderately coarse, sandy loam (1), Moderately fine clay loam (1), Moderately fine sandy clay loam (1), Not recorded (1), Unknown (1)

Geology (field or map data): Serpentine (4), Alluvium (1), Mixed sedimentary (1), Sandstone and other sedimentary (1)

San Mateo County Watersheds: Palo Alto (3), San Mateo Bayside (2), San Francisco Coastal (1), San Gregorio Creek (1)

Site Impacts

This alliance has moderate non-native plant cover (average 36.8%) relative to native cover. Non-native species that occur with highest frequency and abundance include *Bromus hordeaceus*, *Carduus pycnocephalus*, *Plantago lanceolata*, and *Rumex acetosella*.

Erigeron glaucus – Lasthenia californica Association

Common Name: Seaside Daisy – California Goldfields Patches

Alliance: *Lasthenia californica* – *Plantago erecta* – *Vulpia microstachys* Herbaceous Alliance

Local Vegetation Description

The Seaside Daisy – California Goldfields Association forms a continuous herbaceous layer in the single sample available. The shrub layer is absent and the tree layer is absent. Dominant herbs include *Lasthenia californica*, and characteristic herbs include *Anagallis arvensis*, *Avena* spp., *Bromus hordeaceus*, *Bromus maritimus*, *Calystegia subacaulis*, *Carduus pycnocephalus*, *Cirsium quercetorum*, *Clarkia rubicunda*, *Daucus carota*, *Eriogonum latifolium*, *Erodium cicutarium*, *Eschscholzia californica*, *Geranium dissectum*, *Grindelia stricta*, *Hirschfeldia incana*, *Hordeum brachyantherum*, *Hordeum murinum*, *Hypochaeris radicata*, *Layia platyglossa*, *Lolium perenne*, *Lotus wrangelianus*, *Lupinus nanus*, *Medicago* spp., *Oxalis pes-caprae*, *Plantago coronopus*, *Plantago lanceolata*, *Poa unilateralis*, *Polycarpon tetraphyllum*, *Ranunculus californicus*, *Sidalcea malviflora*, *Sisyrinchium bellum*, *Soliva sessilis*, *Sonchus asper*, *Trifolium* spp., *Trifolium campestre*, and *Trifolium tomentosum*. Commonly associated emergent shrubs at sparse cover include *Lupinus versicolor*.

Hemizonia congesta – Lolium perenne Association

Common Name: Hemizonia congesta – Italian Ryegrass Patches

Alliance: *Lasthenia californica – Plantago erecta – Vulpia microstachys* Herbaceous Alliance

Local Vegetation Description

The *Hemizonia congesta* – Italian Ryegrass Association forms an open herbaceous layer in the single sample available. The shrub layer is sparse and the tree layer is absent. Characteristic herbs include *Hemizonia congesta* and *Lolium perenne*. Those herbs often present include *Avena* spp., *Bromus hordeaceus*, *Chlorogalum pomeridianum*, *Eschscholzia californica*, and *Nassella pulchra*, and herbs that are sometimes present include *Achillea millefolium*, *Aira caryophyllea*, *Anagallis arvensis*, *Briza minor*, *Centaurea muehlenbergii*, *Cryptantha flaccida*, *Cynosurus echinatus*, *Dichelostemma capitatum*, *Eriogonum nudum*, *Euphorbia spathulata*, *Hesperevax sparsiflora*, *Hordeum marinum*, *Hypochaeris glabra*, *Juncus bufonius*, *Leontodon taraxacoides*, *Lotus wrangelianus*, *Medicago* spp., *Plantago erecta*, *Poa secunda*, *Ranunculus californicus*, *Silene gallica*, *Sisyrinchium bellum*, *Streptanthus glandulosus*, *Triteleia laxa*, *Vulpia bromoides*, and *Vulpia microstachys*.

Vulpia microstachys – Plantago erecta – Calycadenia (truncata, multiglandulosa) Association

Common Name: Small Fescue – Dwarf Plantain – Rosin Weed Patches

Alliance: *Lasthenia californica – Plantago erecta – Vulpia microstachys* Herbaceous Alliance

Local Vegetation Description

The Small Fescue – Dwarf Plantain – Rosin Weed Association forms an intermittent herbaceous layer. The shrub layer is open and the tree layer is absent. Characteristic herbs include *Bromus hordeaceus*, *Calycadenia multiglandulosa*, *Nassella pulchra*, and *Plantago erecta*. Those herbs often present include *Avena* spp., *Chlorogalum pomeridianum*, *Elymus multisetus*, *Eriogonum nudum*, *Eschscholzia californica*, *Lolium perenne*, *Poa secunda*, and *Vulpia microstachys*. Commonly associated non-vascular plants include Moss.

Vulpia microstachys – *Plantago erecta* – *Calycadenia (truncata, multiglandulosa)* Association
Lasthenia californica – *Plantago erecta* – *Vulpia microstachys* Herbaceous Alliance

***Lasthenia glaberrima* Herbaceous Alliance**

Common Name: Smooth goldfields vernal pool bottoms

NVC Alliance Code: A4172. *Lasthenia glaberrima* Vernal Pool Alliance

Statewide Description

Lasthenia glaberrima is typically co-dominant or characteristically present in the herbaceous layer with *Alopecurus saccatus*, *Callitricha marginata*, *Castilleja campestris*, *Centromadia fitchii*, *Crassula aquatica*, *Distichlis spicata*, *Downingia bicornuta*, *Downingia cuspidata*, *Downingia insignis*, *Eleocharis macrostachya*, *Eryngium* spp., *Glyceria ×occidentalis*, *Gratiola ebracteata*, *Holocarpha virgata*, *Isoetes howellii*, *Lasthenia fremontii*, *Lilaea scilloides*, *Lupinus bicolor*, *Lythrum hyssopifolia*, *Lythrum portula*, *Myosurus minimus*, *Plagiobothrys stipitatus* var. *micranthus*, *Pleuropogon californicus*, *Pogogyne douglasii*, *Psilocarphus brevissimus* var. *brevissimus*, *Ranunculus bonariensis* var. *trisepalus*, and *Trifolium variegatum*. Other common species include *Hordeum marinum*, *Leontodon saxatilis*, *Lolium perenne*, or *Polypogon monspeliensis*.

Barbour et al. (2003, 2007b) recognized the *Downingia* – *Lasthenia* Class for California vernal pool vegetation on all geomorphic surfaces, landscapes, and soil types in the Central Valley and adjacent foothills. Within that class, Barbour et al. recognized this *Lasthenia glaberrima* Alliance for vegetation of deeper pools bottoms. The alliance has a high constancy and abundance of *Lasthenia glaberrima* and/or *Eleocharis macrostachya*, which are extremely flood tolerant. Associations in this alliance differ

Leymus cinereus – *Leymus triticoides* Herbaceous Alliance

from other freshwater vernal pool alliances in their absence or much lower constancy of species adapted to short inundation periods such as *Blennosperma nanum* var. *nanum*, *Centromadia fitchii*, *Cicendia quadrangularis*, *Downingia cuspidata*, *Lepidium nitidum*, *Limnanthes douglasii* ssp. *rosea*, *Plagiobothrys greenei*, and *Trifolium depauperatum*. Lengthy inundation also leads to a lower degree of invasion by non-natives. However, stands do have *Downingia bicornuta* and *Eryngium castrense*, which grow across pools of varying degrees of inundation.

The *Lasthenia glaberrima* Alliance occurs on a variety of geomorphic surfaces, landforms, and soil series. Stands occur primarily in freshwater pools but sometimes occur in slightly saline/alkaline pools. Within the alliance are six associations: three that are characteristic of hardpan and volcanic rock pools, and three that are found in claypan pools (Barbour et al. 2007b).

Local Vegetation Description

The Smooth goldfields vernal pool bottoms Alliance forms an intermittent to continuous herbaceous layer. The shrub layer is absent and the tree layer is absent. Dominant herbs include *Pleurogrammus californicus*, and characteristic herbs include *Hordeum marinum* and *Mentha pulegium*. Those herbs often present include *Croton setigerus*, *Cyperus eragrostis*, *Eleocharis macrostachya*, *Epilobium densiflorum*, *Hordeum brachyantherum*, *Limnanthes douglasii*, *Lolium perenne*, *Lythrum hyssopifolium*, *Rumex conglomeratus*, *Rumex crispus*, and *Xanthium strumarium*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	0.0	0 – 0	no data	no data
Hardwood	0.0	0 – 0	no data	no data
Regenerating or Shrubby Tree	0.0	0 – 0	no data	no data
Shrub	0.0	0 – 0	no data	no data
Herb	70.0	60 – 80	0.5	0 – 1

Local Membership Rule

Pleurogrammus californicus and/or *Lasthenia glaberrima* are present, sometimes with high cover in the herbaceous layer along with *Limnanthes douglasii*, *Navarretia leucocephala*, *Eryngium aristulatum*, and/or *Isoetes howellii*. If *Eleocharis macrostachya* or *E. palustris* is present and co-dominant, key to this alliance instead of *Eleocharis*. Stands typically occur in vernal pools or vernally influenced marshes.

Local Environmental Description

Elevation: Mean 67 m, Range 14 – 120 m

Aspect: Flat (2)

Slope: Mean 1 degrees, Range 0 – 1 degrees

Macro Topography: Bottom to Lower 1/3 of slope (1), Lower 1/3 of slope (1)

Large Rock: 0.0%

Small Rock: 0.0%

***Leymus cinereus* – *Leymus triticoides* Herbaceous Alliance**

Common Name: Ashy ryegrass – creeping ryegrass turfs

NVC Alliance Code: A1329. *Leymus cinereus* - *Leymus triticoides* Alkaline Wet Meadow Alliance

Statewide Description

Leymus cinereus and/or *Leymus triticoides* is dominant or co-dominant in the herbaceous layer with *Ambrosia psilostachya*, *Anemopsis californica*, *Aristida purpurea*, *Avena fatua*, *Bromus* spp., *Danthonia unispicata*, *Distichlis spicata*, *Elymus elymoides*, *Hordeum* spp., *Juncus arcticus*, *Lolium perenne*, *Poa secunda* or *Triglochin maritima*. Emergent trees and shrubs may be present at low cover.

Many regional descriptions include the alliance in an alkali meadow category. Stands often occur in a fine mosaic with upland shrublands, including *Artemisia tridentata* and *Sarcobatus vermiculatus* alliances.

Soils are influenced by accumulations of coarse to fine volcanic tephra (Young et al. 2007).

The two primary species in this alliance were treated separately in the 2009 book, A Manual of California Vegetation, second edition. *Leymus cinereus* and *L. triticoides* may hybridize when they co-occur.

Leymus triticoides also hybridizes with another large California species, *L. condensatus* in the western Mojave and in the southern Sierra Nevada Foothills. The resulting species

complexes are often difficult to identify and may be ecologically overlapping.

Local Vegetation Description

The Ashy ryegrass – creeping ryegrass turfs Alliance forms a continuous herbaceous layer. The shrub layer is open and the tree layer is absent. Dominant herbs include *Elymus triticoides*, and characteristic herbs include *Lolium perenne*. Those herbs often present include *Avena* spp., *Bromus hordeaceus*, and *Carduus pycnocephalus*, and herbs that are sometimes present include *Brassica nigra*, *Briza minor*, *Bromus diandrus*, *Bromus madritensis*, *Chlorogalum pomeridianum*, *Erodium botrys*, *Geranium dissectum*, *Holcus lanatus*, *Hordeum brachyantherum*, *Juncus arcticus*, *Juncus patens*, *Picris echioides*, *Rumex acetosella*, *Rumex conglomeratus*, *Sisyrinchium bellum*, *Sonchus asper*, *Vicia sativa*, and *Vulpia bromoides*. Commonly associated non-vascular plants include Moss.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range

Leymus triticoides Association

Common Name: Creeping Wildrye Patches

Alliance: *Leymus cinereus* – *Leymus triticoides* Herbaceous Alliance

Local Vegetation Description

The Creeping Wildrye Association forms a continuous herbaceous layer. The shrub layer is open and the tree layer is absent. Dominant herbs include *Elymus triticoides*, and characteristic herbs include *Lolium perenne*. Those herbs often present include *Avena* spp., *Bromus hordeaceus*, *Bromus madritensis*, *Carduus pycnocephalus*, and *Erodium botrys*, and herbs that are sometimes present include *Brassica nigra*, *Briza minor*, *Bromus diandrus*, *Chlorogalum pomeridianum*, *Hordeum brachyantherum*, *Juncus arcticus*, *Juncus patens*, *Picris echioides*, *Rumex conglomeratus*, *Sisyrinchium bellum*, and *Sonchus asper*. Commonly associated non-vascular plants include Moss.

***Leymus mollis* Herbaceous Alliance**

Common Name: Sea lyme grass patches

NVC Alliance Code: A2066. *Poa macrantha* - *Leymus mollis* - *Festuca rubra* Sand Dune Grassland Alliance

Statewide Description

Leymus mollis is dominant or characteristically present in the herbaceous layer with *Abronia latifolia*, *Achillea millefolium*, *Ambrosia chamissonis*, *Ammophila arenaria*, *Artemisia pycnocephala*, *Cakile* spp., *Calystegia soldanella*, *Carpobrotus chilensis*, *Lathyrus littoralis*, *Poa douglasii*, and *Poa macrantha*.

Because *Leymus mollis* is an obligate psammophyte, it thrives under conditions of active sand accretion of nearshore dunes and upper beaches (Pickart and Barbour 2007). *Leymus mollis* and *Abronia umbellata* ssp. *breviflora* (a CA rare plant with a rank of 1B.1) grow in the same habitat as the invasive non-native grass *Ammophila arenaria*, which has reduced and replaced these native species over much of their ranges in California. *Leymus mollis* stands fluctuate between being grass- and herb-dominated. They are generally small (< 0.5 ha) and patchy and intermix with stands of the *Abronia latifolia* – *Ambrosia chamissonis* Alliance.

Local Vegetation Description

The Sea lyme grass patches Alliance forms an intermittent to continuous herbaceous

Leymus mollis Herbaceous Alliance

layer. The shrub layer is open and the tree layer is absent. Dominant herbs include *Elymus mollis*, and characteristic herbs include *Ambrosia chamissonis*, *Cakile maritima*, and *Carpobrotus edulis*. Those herbs often present include *Abronia latifolia* and *Camissonia cheiranthifolia*, and herbs that are sometimes present include *Anagallis arvensis*, *Artemisia pycnocephala*, *Bromus diandrus*, *Castilleja latifolia*, *Distichlis spicata*, *Eriophyllum stoechadifolium*, *Fragaria chiloensis*, *Juncus lescurii*, *Plantago maritima*, *Poa douglasii*, *Sedum spathulifolium*, *Sonchus asper*, and *Sonchus oleraceus*.

***Lolium perenne* Herbaceous Semi-Natural Alliance**

Common Name: Perennial rye grass fields

NVC Alliance Code: A3871. *Lolium perenne* Ruderal Grassland Alliance

Statewide Description

Lolium perenne is dominant or co-dominant with other non-natives in the herbaceous layer with *Agrostis stolonifera*, *Alopecurus aequalis*, *Asclepias fascicularis*, *Avena fatua*, *Brassica nigra*, *Bromus diandrus*, *Bromus hordeaceus*, *Centaurium muehlenbergii*, *Cirsium vulgare*, *Cryptantha flaccida*, *Euphorbia spathulata*, *Festuca arundinacea*, *Holcus lanatus*, *Hordeum brachyantherum*, *Hordeum marinum*, *Leontodon saxatilis*, *Leymus triticoides*, *Lotus corniculatus*, *Microseris douglasii*, *Nassella pulchra*, *Nasturtium officinale*, *Phalaris aquatica*, *Plantago erecta*, *Poa pratensis*, *Rumex crispus*, and *Trifolium* spp. Emergent trees and shrubs may be present at low cover.

Lolium perenne is a widespread and adaptable grass in cismontane California, and the plants grow in a wide range of soil types, except for those excessively drained. Many herbaceous alliances have significant cover of *L. perenne*, including stands of the *Eleocharis macrostachya*, *Juncus arcticus* (var. *balticus*, *mexicanus*), *Leymus triticoides*, *Muhlenbergia rigens*, *Plagiobothrys nothofulvus*, and *Trifolium variegatum* Alliances. While membership rules vary among studies, Sawyer et al. (2009) consider stands to be included in this type if *Lolium perenne* is a strong dominant, either alone or with other non-natives, largely to the exclusion of native plants. Generally, this type occurs in seasonally moist to wet environments that are regularly disturbed through grazing, fire, flooding, or mechanical means.

Local Vegetation Description

The Perennial rye grass fields Alliance forms a continuous herbaceous layer. The shrub layer is open and the tree layer is open. Characteristic herbs include *Bromus hordeaceus*, *Lolium perenne*, and *Plantago lanceolata*. Herbs often present include *Anagallis arvensis*, *Anthemis cotula*, *Avena* spp., *Bellardia trixago*, *Brachypodium distachyon*, *Briza minor*, *Bromus diandrus*, *Carduus pycnocephalus*, *Cirsium vulgare*, *Hordeum marinum*, *Lotus corniculatus*, *Medicago* spp., *Mentha pulegium*, *Phalaris aquatica*, *Rumex acetosella*, *Sisyrinchium bellum*, *Trifolium angustifolium*, *Trifolium dubium*, *Vicia sativa*, and *Vulpia bromoides*, and herbs that are sometimes present include *Centaurium tenuiflorum*, *Conium maculatum*, *Convolvulus arvensis*, *Cynosurus echinatus*, *Gastridium phleoides*, *Geranium dissectum*, *Holcus lanatus*, *Hordeum murinum*, *Linum bienne*, *Linum usitatissimum*, *Madia sativa*, *Matricaria discoidea*, *Parentucellia viscosa*, *Picris echioides*, *Rumex pulcher*, *Rumex* spp., *Symphyotrichum chilense*, *Taraxacum officinale*, *Trifolium* spp., *Vicia* spp., and *Vicia tetrasperma*. Commonly associated emergent shrubs at sparse cover include *Baccharis pilularis*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	4.0	0 – 8	10.0	5 – 15
Hardwood	1.5	1 – 2	3.5	2 – 5
Regenerating or Shrubby Tree	0.0	0.0 – 0.0	no data	no data
Shrub	3.5	1.0 – 6.0	0.8	0 – 2
Herb	97.0	95 – 99	0.3	0 – 0.5

Local Membership Rule

Lolium perenne dominates or co-dominates with *Avena* spp., *Bromus* spp., *Hordeum marinum*, *H. murinum*, *Medicago*, *Trifolium subterraneum*, *Elymus caput-medusae*, and other non-natives in the herbaceous layer. Native species are typically less than 10% relative cover. These invaded stands are often found on moist or poorly drained sites, on or off serpentine.

Local Environmental Description

Lolium perenne Semi-natural Association

Common Name: Italian Ryegrass Patches

Alliance: *Lolium perenne* Herbaceous Semi-Natural Alliance

Local Vegetation Description

The Italian Ryegrass Association forms a continuous herbaceous layer. The shrub layer is sparse and the tree layer is sparse. Dominant herbs include *Lolium perenne*. Those herbs often present include *Hordeum murinum*, and herbs that are sometimes present include *Achillea millefolium*, *Amsinckia* spp., *Avena* spp., *Bromus diandrus*, *Bromus hordeaceus*, *Carduus pycnocephalus*, *Erodium cicutarium*, *Eschscholzia californica*, *Nassella pulchra*, *Plantago erecta*, *Rumex acetosella*, *Silybum marianum*, *Trifolium subterraneum*, and *Vicia sativa*.

***Mesembryanthemum* spp. – *Carpobrotus* spp. Herbaceous Semi-Natural Alliance**

Common Name: Ice plant mats

NVC Alliance Code: A1620. *Mesembryanthemum* spp. - *Carpobrotus* spp. Ruderal Grassland Alliance

Statewide Description

Carpobrotus chilensis, *C. edulis*, *Mesembryanthemum*, or other ice plant taxa are dominant in the herbaceous layer. At least eight invasive ice plant taxa grow in California: *Aptenia cordifolia*, *Carpobrotus edulis*, *C. chilensis*, *Conicosia pugioniformis*, *Drosanthemum floribundum*, *Malephora crocea*, *Mesembryanthemum crystallinum*, and *M. nodiflorum*.

Carpobrotus edulis is a ground-hugging succulent perennial that forms impenetrable mats covering large areas. This ice plant has been widely planted for soil stabilization and landscaping. The success of *C. edulis* is due particularly to its tolerance of a wide range of soil moisture and nutrient conditions, and to its dispersal by mammals (D'Antonio 1993). This species is often confused with *C. chilensis*, a smaller, less aggressive ice plant with magenta flowers. The two species hybridize, and the hybrids are invasive as well.

Aptenia cordifolia grows in disturbed places and on the margins of coastal wetlands (Kitz 2000a). *Conicosia pugioniformis*, a short-lived succulent, has narrow leaves and

does not form clonal mats. It is most abundant in open patches on dunes and in recently disturbed areas (Albert and D'Antonio 2000). The uncommon *Drosanthemum floribundum* is a mat-forming shrub. *Malephora crocea* is a prostrate shrub with linear leaves, common in coastal southern California (DiTomaso and Healy 2007). *Mesembryanthemum crystallinum* and *M. nodiflorum* invade coastal bluffs and interior alkaline wetlands in southern California (Randall 2000).

Local Vegetation Description

The Ice plant mats Alliance forms an intermittent to continuous herbaceous layer. The shrub layer is sparse and the tree layer is absent. Dominant herbs include *Carpobrotus edulis*. Those herbs often present include *Ambrosia chamissonis*, *Eriogonum latifolium*, *Eriophyllum stoechadifolium*, and *Galium aparine*, and herbs that are sometimes present include *Abronia latifolia*, *Achillea millefolium*, *Armeria maritima*, *Artemisia pycnocephala*, *Bromus carinatus*, *Bromus diandrus*, *Bromus hordeaceus*, *Bromus maritimus*, *Cakile maritima*, *Camissonia cheiranthifolia*, *Camissonia* spp., *Cardamine oligosperma*, *Claytonia perfoliata*, *Daucus pusillus*, *Elymus mollis*, *Erigeron glaucus*, *Eschscholzia californica*, *Fragaria chiloensis*, *Hirschfeldia incana*, *Lasthenia californica*, *Marah oreganus*, *Medicago* spp., *Nassella pulchra*, *Plantago coronopus*, *Polygonum paronychia*, *Raphanus sativus*, *Sonchus asper*, *Spergularia maritima*, and *Stellaria media*. Commonly associated emergent shrubs at sparse cover include *Baccharis pilularis*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	0.0	0 – 0	no data	no data
Hardwood	0.0	0 – 0	no data	no data

Shrub	1.3	0 – 5	0.5	0 – 1
Herb	81.3	50 – 95	0.3	0 – 0.5

Local Membership Rule

Carpobrotus and/or *Mesembryanthemum* dominate on bluffs, dunes, or disturbed lands, often forming impenetrable mats that prevent natives from establishing.

Local Environmental Description

Mimulus (guttatus) Herbaceous Alliance

Common Name: Common monkey flower seeps

NVC Alliance Code: N/A.

Statewide Description

Mimulus guttatus, other wetland *Mimulus* species, or various wetland forbs such as *Cirsium* and *Stachys* species may be dominant or characteristically present in the herbaceous layer with *Bromus diandrus*, *Bromus hordeaceus*, *Carex* spp., *Equisetum arvense*, *Juncus* spp., *Lactuca serriola*, *Lotus purshianus*, *Melilotus indicus*, *Pentagramma triangularis*, *Poa tenerima*, *Rumex crispus*, *Sonchus asper*, *Trifolium microcephalum*, *Triteleia hyacinthina*, and *Vulpia microstachys*. Emergent shrubs may be present at low cover, including *Baccharis salicifolia* or *Ceanothus cuneatus*.

The *Mimulus (guttatus)* Alliance often forms stands within the splash zone of small first-order streams, seeps, springs, and hanging gardens. Stands often occur as small patches or in narrow linear strips, occasionally broadening into small hollows. Some stands are found on very steep cascades and waterfalls, or along gentle streams. The floristic composition of stands is variable. As currently understood, the alliance includes stands with *Mimulus guttatus* or related lower-elevation *Mimulus* spp. characteristically present. Stands sometimes occur in mesic upland areas that quickly dry by mid to late spring; they are not usually on flats or in swales, unlike stands of the vernal pool alliances.

Local Vegetation Description

The Common monkey flower seeps Alliance forms an open to continuous herbaceous layer. The shrub layer is sparse to open and the tree layer is sparse. Characteristic herbs include *Cirsium fontinale*, *Lolium perenne*, and *Mimulus guttatus*. Herbs often present include *Achillea millefolium*, *Carex serratodens*, *Hemizonia congesta*, *Hordeum brachyantherum*, *Juncus xiphoides*, *Lactuca saligna*, *Polypogon monspeliensis*, and *Polypogon viridis*, and herbs that are sometimes present include *Avena* spp., *Bromus hordeaceus*, *Elymus triticoides*, *Eschscholzia californica*, *Lessingia* spp., *Nassella pulchra*, and *Scrophularia californica*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	0.0	0 – 0	no data	no data
Hardwood	0.7	0 – 5	no data	no data
Regenerating or Shrubby Tree	0.1	0 – 1.2	1.5	1 – 2
Shrub	1.8	0 – 8	1.7	0.5 – 5
Herb	40.7	10 – 78	0.7	0 – 2

Local Membership Rule

Mimulus guttatus or another wetland *Mimulus* species dominates or co-dominates in the herbaceous layer with *Cirsium* and *Juncus* spp. or non-native grasses such as *Lolium perenne* and *Polypogon monspeliensis*. Stands are found in moist or saturated settings along streams, ephemeral cascades, ditches, fens, seeps, and springs often with high cover of moss.

Local Environmental Description

Elevation: Mean 203 m, Range 17 – 360 m

Aspect: SW (14), SE (6), Flat (1), NE (1), NW (1), S (1)

Slope: Mean 13 degrees, Range 0 – 60 degrees

Macro Topography: Draw (7), Middle 1/3 of slope (7), Basin/Wetland (5), Bottom (2), Bottom to Mid 1/3 of slope (1), Lower 1/3 of slope (1), Lower to Middle 1/3 of slope (1)

Large Rock: Mean 6.4%, Range 0.0 – 36.0%

Small Rock: Mean 12.8%, Range 0.0 – 55.0%

Fines Cover: Mean 33.0%, Range 0.0 – 82.0%

Litter Cover: Mean 16.6%, Range 0.0 – 90%

Co.: Coyote Creek (20); Santa Cruz Co.:

Site Impacts

This alliance has moderate non-native plant cover (average 25.7%) relative to native cover. Non-native species that occur with highest frequency and abundance include *Bromus hordeaceus*, *Lactuca saligna*, *Polypogon monspeliensis*, and *Polypogon viridis*.

Associations in San Mateo County

- *Cirsium fontinale*
- *Mimulus guttatus*

Classification Comments

This Alliance has been revised to include other wetland forbs and *Mimulus* spp. that occur in lower elevation wetland seeps, springs, and streams to better align with the NVC. The name of the alliance is likely to change upon additional peer review of the NVC. Since the number of surveys of this alliance in San Mateo County is low, data from nearby counties were included.

Small Rock: Mean 5.0%, Range 0.0 – 10.0%

Fines Cover: Mean 42.5%, Range 8.0 – 77.0%

Litter Cover: Mean 50.0%, Range 10.0 – 90%

Soil Texture (field assessed): Coarse, loamy sand (1), Medium silt (1)

Geology (field or map data): Granitic (generic) (1), Ultramafic (type unknown) (1)

San Mateo County Watersheds: Pacifica (1)

Other Watersheds, Marin Co.: Petaluma River (1)

Site Impacts

This association has greater cover of non-native (average 53.3%) than native. Non-native species that occur with highest frequency and abundance include *Cakile*

Mimulus guttatus Association
Mimulus (guttatus) Herbaceous Alliance

maritima, *Cotula coronopifolia*, *Hordeum marinum*, *Lactuca saligna*, *Lolium perenne*, *Polypogon monspeliensis*, *Raphanus sativus*, and *Sonchus asper*.

Classification Comments

Since the number of surveys of this association in San Mateo County are low, data from nearby counties were included.

Nassella spp. – Melica spp. Herbaceous Alliance

Common Name: Needle grass - Melic grass grassland

NVC Alliance Code: A1248. *Nassella lepida* - *Melica torreyana* Grassland Alliance

Statewide Description

Melica californica, *M. torreyana*, *Nassella cernua*, *N. lepida*, and/or *N. pulchra* dominate in the herbaceous layer with *Aristida ternipes*, *Avena* spp., *Bromus* spp., *Calochortus* spp., *Calamagrostis koelerioides*, *Calystegia* spp., *Chlorogalum pomeridianum*, *Clarkia* spp., *Croton setigerus*, *Cryptantha* spp., *Daucus pusillus*, *Dichelostemma capitatum*, *Elymus* spp., *Eriogonum* spp., *Erodium* spp., *Eschscholzia californica*, *Festuca californica*, *Hirschfeldia incana*, *Holocarpha virgata*, *Hordeum brachyantherum*, *Koeleria macrantha*, *Lasthenia* spp., *Lepidium nitidum*, *Leymus triticoides*, *Lolium perenne*, *Lupinus* spp., *Plantago* spp., *Poa secunda*, *Sanicula* spp., *Sisyrinchium bellum*, *Trifolium* spp., and *Vulpia* spp. Emergent trees and shrubs may be present at low cover.

Nassella pulchra stands commonly exist in deep and clay-rich soils, but they also occur in sterile serpentine soils (Evens and San 2004, Gelbard and Harrison 2003, Hamilton 1997, Harrison and Viers 2007, McNaughton 1968) or in shallow soils of coastal hills in central and southern California (Keeler-Wolf et al. 2003a). Coastal stands currently occur from Baja California, and San Diego Co., northward across the Coast Ranges to Sonoma Co. (Bartolome et al. 2007a), and coastal stands tend to have more emergent shrubs, suggesting seral and/or dynamic relationships with woody vegetation types

(Tyler et al. 2007). *Nassella cernua* stands commonly appear in the transition between coastal/valley grasslands and inland/desert steppes. For example, *N. cernua* and *Achnatherum speciosum* replace *N. pulchra* and *Leymus triticoides* in the transition between the eastern desert slopes of southern California mountains and the valley grasslands (Bartolome et al. 2007a).

In southern California, *Nassella lepida* is a common understory herb on dry, fine-textured soils in stands of the *Artemisia californica* and *Salvia leucophylla* Alliances. In some areas, such as the Santa Monica Mountains, small (< 1 ha) glades dominated by this species occur with a diverse mixture of native plants.

Melica californica has a broad elevation range from near sea level on the North and Central Coast to over 1500 m elevation in the Coast Ranges, Klamath Mountains, and the Sierra Nevada. Stands are best described from Sonoma and Napa Cos. where they tend to occur on more mesic slopes than stands dominated by *Nassella pulchra*. *M. californica* often forms small stands in openings in woodlands of *Quercus agrifolia*, *douglasii*, *garryana*, *lobata*, and *wislizeni*. It is tolerant of serpentine soils and may grow in relatively deep or shallow soils.

Melica torreyana is endemic to California, typically occurring under a canopy of chaparral and forests. At times, it dominates in open habitats where the plants form loose tufts of culms forming localized stands in grasslands or meadows. *Melica torreyana* stands appear to occur both on and off serpentine substrates.

Melica imperfecta and *M. stricta* have not been observed to form stands; both tend to occur in drier, rockier areas and are often components of other alliances.

Local Vegetation Description

The Needle grass - Melic grass grassland Alliance forms an intermittent to continuous herbaceous layer. The shrub layer is sparse and the tree layer is typically absent. Characteristic herbs include *Lolium perenne* and *Nassella pulchra*. Those herbs often present include *Avena* spp., *Brachypodium distachyon*, *Bromus hordeaceus*, *Eschscholzia californica*, and *Vulpia bromoides*, and herbs that are sometimes present include *Achillea millefolium*, *Anagallis arvensis*, *Bromus carinatus*, *Bromus diandrus*, *Calystegia subacaulis*, *Carduus pycnocephalus*, *Chlorogalum pomeridianum*, *Clarkia rubicunda*, *Danthonia californica*, *Dichelostemma capitatum*, *Elymus glaucus*, *Elymus multisetus*, *Erodium botrys*, *Geranium dissectum*, *Layia platyglossa*, *Lotus wrangelianus*, *Melica californica*, *Nassella lepida*, *Plantago erecta*, *Sisyrinchium bellum*, *Sonchus asper*, and *Vulpia microstachys*. Commonly associated emergent shrubs at sparse cover include *Baccharis pilularis*. Commonly associated non-vascular plants include Moss.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range

Shrub	0.7	0 – 6	no data	no data
Herb	71.4	40 – 95	0.5	0 – 1

Local Membership Rule

Melica californica, *M. torreyana*, and/or *Nassella* spp. are dominant, co-dominant or characteristic in stands. *Avena*, *Bromus*, *Hemizonia congesta*, *Lolium perenne*, *Plantago erecta*, *P. lanceolata*, and/or *Trifolium* spp. intermix as dominant, co-dominant or characteristic taxa in associations of this alliance. If *Danthonia californica* or *Festuca idahoensis* is co-dominant or characteristic with *Nassella pulchra*, then key to the *Festuca idahoensis* – *Danthonia* alliance.

Local Environmental Description

Elevation: Mean 244 m, Range 67 – 760 m

Aspect: SW (12), SE (7), NW (3), S (2), NE (1)

Local Environmental Description

Elevation: Mean 532 m, Range 105 – 796 m

Aspect: SW (4), NW (1), S (1)

Slope: Mean 12 degrees, Range 6 – 19 degrees

Macro Topography: Middle 1/3 of slope (4), Bottom (1), Ridge top (1)

Large Rock: no data

Small Rock: no data

Fines Cover: 0.2%

Litter Cover: Mean 0.6%, Range 0.2 – 1%

Soil Texture (field assessed):

Geology (field or map data): Sandstone and other sedimentary (4), Sandstone, shale, and conglomerate (2)

San Mateo County Watersheds: San Mateo Bayside (2), Pescadero Creek (2)

Other Watersheds, Santa Cruz Co.: Pescadero Creek (2)

Site Impacts

Melica californica Association
Nassella spp. – *Melica* spp. Herbaceous Alliance

This association has greater cover of non-native (average 60.2%) than native. Non-native species that occur with highest frequency and abundance include *Aira caryophyllea*, *Anagallis arvensis*, *Avena* spp., *Brachypodium distachyon*, *Briza maxima*, *Bromus diandrus*, *Bromus hordeaceus*, *Carduus pycnocephalus*, *Cynosurus echinatus*, *Erodium botrys*, *Hypochaeris glabra*, *Lolium perenne*, *Rumex acetosella*, and *Sonchus asper*.

Classification Comments

Since the number of surveys of this association in San Mateo County are low, data from nearby counties were included.

Nassella pulchra – *Hemizonia congesta* Association
Nassella spp. – *Melica* spp. Herbaceous Alliance

Nassella pulchra – Lolium perenne – (Trifolium spp.) Association

Common Name: Italian Ryegrass – Purple Needlegrass Patches

Alliance: *Nassella* spp. – *Melica* spp. Herbaceous Alliance

Local Vegetation Description

The Italian Ryegrass – Purple Needlegrass Association forms an intermittent to continuous herbaceous layer. The shrub layer is absent and the tree layer is absent. Dominant herbs include *Lolium perenne*, and characteristic herbs include *Nassella pulchra*. Those herbs often present include *Avena* spp., *Bromus hordeaceus*, and *Chlorogalum pomeridianum*, and herbs that are sometimes present include *Achillea millefolium*, *Anagallis arvensis*, *Danthonia californica*, *Dichelostemma capitatum*, *Elymus glaucus*, *Eschscholzia californica*, *Hemizonia congesta*, *Lotus* spp., *Lotus wrangelianus*, *Plantago erecta*, *Sisyrinchium bellum*, *Triteleia laxa*, and *Vicia benghalensis*.

Local Environmental Description

Elevation: Mean 116 m, Range 50 – 162 m

Aspect: SE (2), SW (1), E (1)

Slope: Mean 7 degrees, Range 2 – 16 degrees

Macro Topography: Lower 1/3 of slope (1), Entire slope (1), Bottom (1), Middle 1/3 of slope (1)

Large Rock: 1.0%

Small Rock: 16.0%

Fines Cover: Mean 7.1%, Range 0.2 – 20.0%

Litter Cover: Mean 15.4%, Range 0.2 – 45%

Soil Texture (field assessed): Moderately fine sandy clay loam (1)

Geology (field or map data): Sandstone and other sedimentary (1), Sandstone, shale, and conglomerate (1), Serpentine (1), Ultramafic rocks, mostly serpentine (1)

San Mateo County Watersheds: San Mateo Bayside (1)

Other Watersheds, Santa Clara Co.: Coyote Creek (1), Guadalupe River (1), Palo Alto (1)

Site Impacts

Nassella pulchra – Lolium perenne – (Trifolium spp.) Association

Nassella spp. – *Melica* spp. Herbaceous Alliance

This association has greater cover of non-native (average 62.8%) than native. Non-native species that occur with highest frequency and abundance include *Anagallis arvensis*, *Avena* spp., *Bromus hordeaceus*, *Lolium perenne*, and *Vicia benghalensis*.

Classification Comments

Since the number of surveys of this association in San Mateo County are low, data from nearby counties were included.

Nassella pulchra – *Lolium perenne* – *Plantago erecta* Serpentine Association
Nassella spp. – *Melica* spp. Herbaceous Alliance

***Phalaris aquatica* – *Phalaris arundinacea* Herbaceous Semi-Natural Alliance**

Common Name: Harding grass – Reed Canary grass swards

NVC Alliance Code: A3846. *Phalaris arundinacea* Western Ruderal Marsh Alliance

Statewide Description

Phalaris aquatica or *Phalaris arundinacea* is dominant in the herbaceous layer. Scattered emergent shrubs may be present at low cover, including *Baccharis pilularis*, *Baccharis salicifolia*, *Ceanothus cuneatus* or *Salix* spp.

Stands of *Phalaris aquatica* have invaded many inland settings, especially grasslands with past disturbance (such as clearing) or from nearby intentional plantings. *P. aquatica* forms dense patches that prevent the germination of other species (Silveira 2000). Native species richness drops because of a thick surface litter and thatch build-up. In wetlands, land managers plant *Phalaris aquatica* for waterfowl food (Silveira 2000). Other *Phalaris* species are less invasive, but locally found in wildlands: *P. arundinacea*, *P. brachystachys*, *P. canariensis*, *P. caroliniana*, *P. minor*, and *P. paradoxa*. See DiTomaso and Healy (2007) for details.

Although *P. arundinacea* is considered to be native to California, it tends to form stands in cultivated and disturbed settings as some biotypes are of non-native origin (from Europe). Stands of *Phalaris arundinacea* are established in irrigated pastures, wet meadows, pond and lake margins, intermittent drainages and other riparian areas, where *P. arundinacea* often has displaced the local flora upon being cultivated and/or

Phalaris aquatica – *Phalaris arundinacea* Herbaceous Semi-Natural Alliance

escaped (Buck-Diaz et al. 2012). Because of this invasive behavior, associations of this species have been placed in this expanded alliance. This alliance was cited as *Phalaris aquatica* Herbaceous Semi-Natural Alliance in the 2009 book, A Manual of California Vegetation, second edition, and has been expanded to include ruderal stands of *P. arundinacea*.

Local Vegetation Description

The Harding grass – Reed Canary grass swards Alliance forms an open to continuous herbaceous layer. The shrub layer is open and the tree layer is sparse. Dominant herbs include *Phalaris aquatica*. Herbs that are sometimes present include *Aira caryophyllea*, *Anagallis arvensis*, *Avena* spp., *Briza minor*, *Bromus hordeaceus*, *Carex* spp., *Cirsium vulgare*, *Festuca arundinacea*, *Geranium dissectum*, *Holcus lanatus*, *Juncus effusus*, *Juncus patens*, *Lolium perenne*, *Lotus corniculatus*, *Picris echioides*, and *Plantago lanceolata*. Commonly associated emergent shrubs include *Baccharis pilularis*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	0.1	0 – 1	no data	no data
Hardwood	0.0	0 – 0	no data	no data

***Phalaris aquatica* Provisional Semi-natural Association**

Common Name: Harding grass Patches

Alliance: *Phalaris aquatica* – *Phalaris arundinacea* Herbaceous Semi-Natural Alliance

Local Vegetation Description

The Harding grass Association forms an intermittent to continuous herbaceous layer. The shrub layer is sparse and the tree layer is absent. Dominant herbs include *Phalaris aquatica*. Those herbs that are sometimes present include *Aira caryophyllea*, *Anagallis arvensis*, *Avena* spp., *Briza minor*, *Bromus hordeaceus*, *Carex* spp., *Cirsium vulgare*, *Festuca arundinacea*, *Geranium dissectum*, *Holcus lanatus*, *Juncus effusus*, *Juncus patens*, *Lolium perenne*, *Lotus corniculatus*, *Picris echioides*, and *Plantago lanceolata*. Commonly associated emergent shrubs at sparse cover include *Baccharis pilularis*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range

Shrub	2.4	0.2 – 6.0	0.5	0 – 1
Herb	69.5	64 – 75	0.8	0.5 – 1

Local Environmental Description

Elevation: Mean 44 m, Range 22 – 69 m

Aspect: SE (1), SW (1)

Slope: Mean 6 degrees, Range 3 – 8 degrees

Macro Topography: Bottom (1), Lower 1/3 of slope

Large Rock: 0.0%

Small Rock: 0.0%

Fines Cover: Mean 21%, Range 0.2 – 52.9%

Litter Cover: Mean 77%, Range 47.1 – 97%

Soil Texture (field assessed): Fine sand (1), Moderately fine sandy clay loam (1)

Geology (field or map data): Sandstone and other sedimentary (2), Alluvium (1)

San Mateo County Watersheds: Ano Nuevo (2), Pescadero Creek (1)

Site Impacts

This association has greater cover of non-native (average 85.2%) than native. Non-native species that occur with highest frequency and abundance include *Aira caryophyllea*, *Anagallis arvensis*, *Avena* spp., *Briza minor*, *Bromus hordeaceus*, *Cirsium vulgare*, *Festuca arundinacea*, *Geranium dissectum*, *Holcus lanatus*, *Lolium perenne*, *Lotus corniculatus*, *Phalaris aquatica*, *Picris echioides*, and *Plantago lanceolata*.

Classification Comments

This association is considered provisional since it is under-sampled in its expected range.

Polygonum lapathifolium – Xanthium strumarium Herbaceous Alliance

Common Name: Smartweed – cocklebur patches

NVC Alliance Code: N/A.

Statewide Description

Polygonum lapathifolium and/or *Xanthium strumarium* or other knotweed species are dominant or co-dominant in the herbaceous layer with *Bidens frondosa*, *Cuscuta pentagona*, *Echinochloa* spp., *Eleocharis macrostachya*, *Euthamia occidentalis*, *Helianthus annuus*, *Phyla nodiflora*, and *Polygonum* spp.

This alliance was cited as *Persicaria lapathifolia* - *Xanthium strumarium* Provisional Herbaceous Alliance in the 2009 book, A Manual of California Vegetation, second edition. The main diagnostic species in this alliance are considered native to California and North America, but all (including *Helianthus annuus*) are globally widespread due to their weedy nature. This is an example of an annual ruderal alliance with native diagnostic species.

Local Vegetation Description

The Smartweed – cocklebur patches Alliance forms an open to continuous herbaceous layer. The shrub layer is sparse and the tree layer is absent. Dominant herbs include *Polygonum amphibium*. Herbs that are sometimes present include *Agrostis avenacea*, *Alisma lanceolatum*, *Cardamine oligosperma*, *Carex obnupta*, *Centaurium*

muehlenbergii, *Cyperus eragrostis*, *Eleocharis macrostachya*, *Euthamia occidentalis*, *Helenium puberulum*, *Hirschfeldia incana*, *Holcus lanatus*, *Juncus effusus*, *Ludwigia* spp., *Myriophyllum aquaticum*, *Polygonum argyrocoleon*, *Polypogon monspeliensis*, *Pseudognaphalium luteoalbum*, *Schoenoplectus acutus*, *Typha angustifolia*, *Typha latifolia*, and *Xanthium strumarium*.

Commonly associated emergent shrubs at sparse cover include *Rubus ursinus* and *Toxicodendron diversilobum*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	0.0	0 – 0	no data	no data
Hardwood	0.0	0 – 0	no data	no data
Regenerating or Shrubby Tree	0.0	0 – 0	no data	no data
Shrub	0.1	0 – 0.2	0.8	0.5 – 1
Herb	73.8	30 – 95	0.8	0 – 2

Local Membership Rule

Persicaria (= *Polygonum*) spp., *Alisma* spp., and/or *Xanthium strumarium* dominate in marshes and regularly disturbed vernally wet ponds, fields, and stream terraces.

Local Environmental Description

Elevation: Mean 79 m, Range 52 – 110 m

Aspect: Flat (2), NE (1), NW (1)

Slope: Mean 1 degrees, Range 0 – 3 degrees

Macro Topography: Bottom (3), Lower 1/3 of slope (1)

Large Rock: 0.0%

Small Rock: 0.0%

Fines Cover: Mean 20.3%, Range 0.0 – 58.0%

Litter Cover: Mean 52.5%, Range 0.0 – 85%

Soil Texture (field assessed): Not recorded (2), Fine silty clay (1), Muck (1)

Geology (field or map data): Franciscan melange (2), Mixed alluvium (1)

San Mateo County Watersheds: Palo Alto (1), San Mateo Bayside (1)

Other Watersheds, Marin Co.: Lagunitas Creek (1), Novato (1)

Site Impacts

This alliance has low non-native plant cover (average 1.2%) relative to native cover. Non-native species that occur with highest frequency and abundance include *Agrostis avenacea*, *Alisma lanceolatum*, *Hirschfeldia incana*, *Holcus lanatus*, *Myriophyllum aquaticum*, *Polygonum argyrocoleon*, *Polypogon monspeliensis*, and *Pseudognaphalium luteoalbum*.

***Sarcocornia pacifica* (*Salicornia depressa*) Herbaceous Alliance**

Common Name: Pickleweed mats

NVC Alliance Code: A3902. *Sarcocornia pacifica* - *Spartina foliosa* - *Glaux maritima*
Salt Marsh Alliance

Statewide Description

Salicornia depressa, *Sarcocornia pacifica*, and/or *Frankenia salina* is dominant or co-dominant in the subshrub and herbaceous layers with algae and *Atriplex patula*, *Atriplex prostrata*, *Batis maritima*, *Bolboschoenus maritimus*, *Cotula coronopifolia*, *Crypsis schoenoides*, *Cuscuta salina*, *Distichlis spicata*, *Echinochloa crus-galli*, *Frankenia salina*, *Grindelia stricta*, *Jaumea carnosa*, *Juncus* spp., *Lepidium latifolium*, *Limonium californicum*, *Monanthochloe littoralis*, *Persicaria lapathifolia*, *Sesuvium verrucosum*, *Spartina foliosa*, *Suaeda esteroa*, *Suaeda taxifolia*, *Triglochin maritima*, and *Xanthium strumarium*.

In northern California, *Sarcocornia pacifica* co-dominates with *Cuscuta salina* in the high marsh zone, slightly above the zones dominated by the non-native grass *Spartina densiflora*. In central California, *Sarcocornia pacifica* dominates in high- and mid-marsh zones above the zones dominated by the native grass *Spartina foliosa*. In southern California, Zedler et al. (1999) stated that elevation profiles and vegetation patterns do not have discrete zonation, but they recognize three habitats: high marsh, marsh plain, and cordgrass habitat. In the high marsh, *Sarcocornia pacifica* is associated with

Arthrocnemum subterminale and *Cuscuta salina*; the marsh plain is dominated by *Batis maritima*, *Distichlis spicata*, *Monanthochloe littoralis*, and *Sarcocornia pacifica*. General descriptions are found in Grewell et al. (2007).

Local Vegetation Description

The Pickleweed mats Alliance forms an open to continuous herbaceous layer. The shrub layer is sparse and the tree layer is absent. Dominant herbs include *Sarcocornia pacifica* and/or *Frankenia salina*, and characteristic herbs include *Distichlis spicata* and *Jaumea carnosa*. Those herbs often present include *Grindelia stricta* and *Limonium californicum*, and herbs that are sometimes present include *Cuscuta salina*, *Puccinellia* spp., and *Spartina foliosa*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	0.0	0 – 0	no data	no data
Hardwood	0.0	0 – 0	no data	no data

Sarcocornia pacifica – Jaumea carnosa – Distichlis spicata Association

Common Name: Pacific Glasswort – Saltgrass – Marsh Jaumea Tidal Salt Marsh Patches

Alliance: *Sarcocornia pacifica* (*Salicornia depressa*) Herbaceous Alliance

Local Vegetation Description

The Pacific Glasswort – Saltgrass – Marsh Jaumea Tidal Salt Marsh Association forms an intermittent to continuous herbaceous layer. The shrub layer is sparse and the tree layer is absent. Dominant herbs include *Sarcocornia pacifica*, and characteristic herbs include *Distichlis spicata*, *Frankenia salina*, *Jaumea carnosa*, and *Limonium californicum*. Those herbs often present include *Grindelia stricta*, and herbs that are sometimes present include *Cuscuta salina*.

Schoenoplectus (acutus, californicus) Herbaceous Alliance

Common Name: Hardstem and California bulrush marshes

NVC Alliance Code: A3895. *Schoenoplectus americanus* - *Schoenoplectus acutus* - *Schoenoplectus californicus* Marsh Alliance

Statewide Description

Schoenoplectus acutus and/or *S. californicus* is dominant or co-dominant in the herbaceous layer with *Apocynum cannabinum*, *Azolla filiculoides*, *Bolboschoenus maritimus*, *Calystegia sepium*, *Eichhornia crassipes*, *Euthamia occidentalis*, *Hibiscus lasiocarpus*, *Hoita macrostachya*, *Hydrocotyle ranunculoides*, *Leersia oryzoides*, *Ludwigia peploides*, *Lycopus americanus*, *Persicaria punctata*, *Phragmites australis*, *Sparganium eurycarpum*, *Triglochin* spp., *Typha* spp., and *Urtica dioica*. Emergent trees and shrubs may be present at low cover, including trees: *Alnus rhombifolia*, *Populus fremontii*, or *Salix gooddingii*, and shrubs: *Cephalanthus occidentalis*, *Rubus armeniacus*, *Salix exigua*, or *Salix lasiolepis*.

The alliance is a widespread, freshwater to slightly brackish marsh type, typical of marshes throughout much of North America (NatureServe 2007a). Although *Schoenoplectus acutus* and *S. californicus* commonly occur in the same area, *S. acutus* is less tolerant of brackish conditions than is *S. californicus*, and associations dominated by *S. acutus* are not found regularly on the edges of large stretches of open water (Grewell et al. 2007). *S. californicus* tends to dominate on the outer, more-exposed edges of marshes adjacent to open water. However, both species also can co-dominate in stands.

Local Vegetation Description

The Hardstem and California bulrush marshes Alliance forms an open to continuous herbaceous layer. The shrub layer is open and the tree layer is absent. Those herbs often present include *Schoenoplectus californicus*, and herbs that are sometimes present include *Conium maculatum*, *Cyperus eragrostis*, *Eleocharis macrostachya*, *Euthamia occidentalis*, *Helenium puberulum*, *Juncus effusus*, *Lotus corniculatus*, *Polygonum amphibium*, *Polygonum punctatum*, *Potentilla anserina*, *Rorippa curvisiliqua*, *Rumex crispus*, *Schoenoplectus acutus*, *Typha latifolia*, and *Urtica dioica*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	0.0	0 – 0	no data	no data
Hardwood	0.0	0 – 0	no data	no data

Shrub	2.2	0 – 10	3.0	0 – 10
Herb	65.7	25 – 75	2.4	0 – 5

Local Membership Rule

Schoenoplectus acutus or *Schoenoplectus californicus* dominates or co-dominates with other herbs including *Typha* spp. Occurs in both freshwater and tidal marshes, along ponds and lagoons.

Local Environmental Description

Elevation: Mean 72 m, Range 11 – 140 m

Aspect: Flat (6)

Slope: 0 degrees

Macro Topography: Bottom (4), Lower 1/3 of slope (1), Bottom to Lower 1/3 of slope (1)

Large Rock: 0.0%

Small Rock: 0.0%

Fines Cover: Mean 3.7%, Range 0.0 – 16.0%

Litter Cover: Mean 62.2%, Range 47.0 – 81%

***Sedum spathulifolium* Herbaceous Provisional Alliance**

Common Name: Coast Range stonecrop draperies

NVC Alliance Code: A3784. *Sedum spathulifolium* Sparse Rock Vegetation Alliance

Statewide Description

Sedum spathulifolium is dominant in the herbaceous layer with *Bromus rubens*, *Clarkia* spp., *Dichelostemma capitatum*, *Dudleya lanceolata*, *Erigeron petrophilus*, *Galium aparine*, *Melica torreyana*, *Pentagramma triangularis*, and *Polypodium californicum*. Emergent tree bonsai or shrubs may be present at low cover, including the shrubs *Galium porrigens* or *Heteromeles arbutifolia*.

Stands are typically small (< 0.5 ha), with the largest sampled so far at Pinnacles National Monument (NatureServe 2007b). In the future, we need information on species composition of nonvascular plants as well. They may be the diagnostic species if vegetation occurs on these rocky environments. Rock climbing and informal trails have impacted some stands negatively.

Local Vegetation Description

The Coast Range stonecrop draperies Alliance forms an open to continuous herbaceous layer. The shrub layer is open and the tree layer is absent. Dominant herbs include *Polypodium californicum* and *Sedum spathulifolium*. Those herbs often present include *Aira praecox*, *Dudleya farinosa*, and *Hypochaeris radicata*, and herbs that are

sometimes present include *Bromus diandrus*, *Eriophyllum stoechadifolium*, *Plantago lanceolata*, *Poa secunda*, *Rumex acetosella*, and *Vulpia bromoides*. Commonly associated emergent shrubs include *Baccharis pilularis*. Commonly associated non-vascular plants include Lichen and Moss.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	0.0	0 – 0	no data	no data
Hardwood	0.0	0 – 0	no data	no data
Regenerating or Shrubby Tree	0.0	0 – 0	no data	no data
Shrub	2.0	0 – 10	0.6	0 – 2
Herb	43.2	5 – 90	0.3	0 – 0.5

Local Membership Rule

Sedum spathulifolium and/or *Polypodium* spp. dominate small stands on steep north-facing rock outcrops and vertical cliff faces. Moss and lichen species often have high cover.

Local Environmental Description

Elevation: Mean 225 m, Range 39 – 462 m

Aspect: NW (4), NE (2)

Slope: Mean 55 degrees, Range 31 – 70 degrees

Macro Topography: Upper 1/3 of slope (4), Middle to Upper 1/3 of slope (1), Upper 1/3 of slope to Ridgetop (1)

Large Rock: Mean 70.6%, Range 12.0 – 99.0%

Small Rock: Mean 7.6%, Range 0.0 – 45.0%

Fines Cover: Mean 18.4%, Range 0.2 – 87.0%

Litter Cover: Mean 2.6%, Range 0.2 – 10%

Soil Texture (field assessed): Not recorded (5), Unknown (1)

Geology (field or map data): Sandstone (3), Metamorphic (type unknown) (1), Granitic (generic) (1), Ultramafic (type unknown) (1)

San Mateo County Watersheds: Pacifica (1), San Mateo Bayside (1)

Other Watersheds, Marin Co.: Walker Creek (2), Estero San Antonio (1), Point Reyes (1)

Site Impacts

This alliance has low non-native plant cover (average 12.9%) relative to native cover. Non-native species that occur with highest frequency and abundance include *Aira praecox*, *Bromus diandrus*, *Hypochaeris radicata*, *Plantago lanceolata*, *Rumex acetosella*, and *Vulpia bromoides*.

Sparganium (angustifolium) Herbaceous Alliance

Common Name: Mats of bur-reed leaves

NVC Alliance Code: A3893. *Hippuris vulgaris* - *Ruppia* spp. - *Sparganium* spp. Aquatic Vegetation Alliance

Statewide Description

Sparganium angustifolium or another *Sparganium* species is dominant on the water surface with *Brasenia schreberi*, *Callitriche* spp., *Carex utriculata*, *Carex vesicaria*, *Nuphar lutea*, *Potamogeton* spp., *Stuckenia* spp., *Typha* spp. and *Utricularia macrorhiza*.

Sparganium eurycarpum grows along the coast and inland in California, but not in salt marshes. *S. natans* grows in cool, quiet, slightly acidic to somewhat basic waters of bays, pools, ditches, and fens (Kaul 2000). The vegetational relationships among the bur-reeds need clarification.

Sparganium angustifolium is common in California's mountain lakes, regularly forming stands in the middle of small ponds and near lake shorelines. The habitat setting is similar to that of *Nuphar lutea*, but *S. angustifolium* typically occupies shallower water that may fluctuate more widely during the growing season.

Local Vegetation Description

Sparganium (angustifolium) Herbaceous Alliance

The Mats of bur-reed leaves Alliance forms a continuous herbaceous layer. The shrub layer is sparse and the tree layer is absent. Dominant herbs include *Sparganium eurycarpum*. Those herbs often present include *Oenanthe sarmentosa*, and herbs that are sometimes present include *Agrostis pallens*, *Alisma triviale*, *Carex obnupta*, *Conium maculatum*, *Eleocharis macrostachya*, *Epilobium ciliatum*, *Erechtites minimus*, *Galium triflorum*, *Juncus arcticus*, *Juncus effusus*, *Juncus lescurii*, *Juncus phaeocephalus*, *Lemna* spp., *Lythrum hyssopifolium*, *Polygonum amphibium*, *Polygonum punctatum*, *Potentilla anserina*, *Rumex acetosella*, *Rumex conglomeratus*, *Rumex crispus*, and *Schoenoplectus acutus*. Commonly associated emergent shrubs at sparse cover include *Rubus ursinus*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	0.0	0 – 0	no data	no data
Hardwood	0.0	0 – 0	no data	no data
Regenerating or Shrubby Tree	0.0	0 – 0	no data	no data
Shrub	0.2	0 – 1	1.5	1 – 2
Herb	79.8	70 – 90	2.3	1 – 5

Local Membership Rule

Sparganium eurycarpum is dominant in wetlands with other forbs including *Agrostis pallens*, *Oenanthe sarmentosa*, and *Rumex conglomeratus*.

Local Environmental Description

Elevation: Mean 39 m, Range 5 – 69 m

Aspect: Flat (3), NW (2)

Slope: Mean 1 degrees, Range 0 – 3 degrees

Macro Topography: Bottom to Lower 1/3 of slope (2), Lower 1/3 of slope (2), Bottom (1)

Large Rock: 0.0%

Small Rock: 0.0%

Fines Cover: Mean 29.8%, Range 0.0 – 92.0%

Litter Cover: Mean 15.6%, Range 0.0 – 63%

Soil Texture (field assessed): Muck (2), Not recorded (2), Medium silt (1)

Geology (field or map data): Mixed alluvium (1), Sandstone and other sedimentary (1), Alluvium (1), Volcanic and metavolcanic rocks (1), Franciscan melange (1)

San Mateo County Watersheds: Ano Nuevo (1)

Other Watersheds, Marin Co.: Walker Creek (2), Lagunitas Creek (1), Point Reyes (1)

Site Impacts

This alliance has low non-native plant cover (average 2.0%) relative to native cover. Non-native species that occur with highest frequency and abundance include *Conium maculatum*, *Erechtites minimus*, *Lythrum hyssopifolium*, *Rumex acetosella*, *Rumex conglomeratus*, and *Rumex crispus*.

***Typha (angustifolia, domingensis, latifolia)* Herbaceous Alliance**

Common Name: Cattail marshes

NVC Alliance Code: A3896. *Typha domingensis* - *Typha latifolia* - *Phragmites australis* ssp. *americanus* Western Marsh Alliance

Statewide Description

Typha angustifolia, *Typha domingensis* or *Typha latifolia* is dominant or co-dominant in the herbaceous layer with *Agrostis stolonifera*, *Argentina egedii*, *Cyperus* spp., *Distichlis spicata*, *Echinochloa crus-galli*, *Eleocharis macrostachya*, *Equisetum telmateia*, *Juncus* spp., *Lemna minuta*, *Lepidium latifolium*, *Oenanthe sarmentosa*, *Persicaria lapathifolia*, *Persicaria punctata*, *Phragmites australis*, *Schoenoplectus americanus*, *Schoenoplectus californicus*, *Typha ×glauca*, and *Xanthium strumarium*. Emergent trees may be present at low cover, including *Salix* spp.

These species require special considerations for correct identification (see Smith 2000), and they commonly hybridize when they grow in mixed stands. Hybrids between *Typha latifolia* and *T. angustifolia* (*T. ×glauca*) are infertile, but plants are vigorous, and rhizome growth creates large clones, especially in eutrophic, disturbed habitats with unstable water levels. Hybrids between *Typha angustifolia* and *T. domingensis* are highly fertile, and colonies are locally common in the state. *T. angustifolia* was probably introduced from Europe. Its range expansion and hybridization with *T. domingensis*

make the use of plot database information difficult because of many misidentified herbarium specimens (Smith 2000).

Only a few studies in California include plot data and vegetation analysis. Most studies report mixed stands, so this alliance includes both mixed stands and those with a single dominant. This treatment emphasizes the ecological similarities of the three species, with stand differentiation at the association level. Ecological similarities also exist with stands of larger bulrushes (*Schoenoplectus acutus*, *S. californicus*). Stands where *Typha* and *Schoenoplectus* species share dominance are placed in the *Schoenoplectus* Alliances.

Local Vegetation Description

The Cattail marshes Alliance forms an intermittent to continuous herbaceous layer. The shrub layer is sparse and the tree layer is sparse. Dominant herbs include *Typha angustifolia*. Herbs often present include *Schoenoplectus californicus*, and herbs that are sometimes present include *Artemisia douglasiana*, *Carex* spp., *Juncus patens*, *Polygonum lapathifolium*, *Polygonum punctatum*, *Polygonum* spp., *Potentilla anserina*, *Rumex crispus*, *Scirpus microcarpus*, *Typha latifolia*, and *Urtica dioica*. Commonly associated emergent trees at sparse cover include *Salix laevigata*. Commonly associated emergent shrubs at sparse cover include *Toxicodendron diversilobum* and *Rubus ursinus*.

Lifeform	Cover (%) Mean	Cover (%) Range	Height (m) Mean	Height (m) Range
Conifer	0.0	0 – 0	no data	no data
Hardwood	0.3	0 – 1	no data	no data
Regenerating or Shrubby Tree	0.0	0 – 0	no data	no data
Shrub	0.8	0 – 2	2.1	0.5 – 5
Herb	56.8	33 – 80	1.5	0 – 5

Local Membership Rule

Typha latifolia, *T. angustifolia*, and/or *T. domingensis* dominate in semi-permanently flooded freshwater or brackish marshes. If *Schoenoplectus acutus* or *S. californicus* is co-dominant, key to the *Schoenoplectus* Alliance.

Local Environmental Description

Elevation: Mean 185 m, Range 6 – 619 m

Aspect: Flat (4)

Slope: 0 degrees

Macro Topography: Bottom (3), Bottom to Lower 1/3 of slope (1)

Large Rock: 0.0%

Small Rock: 0.0%

Fines Cover: Mean 3.3%, Range 1 – 5%

Litter Cover: Mean 67.3%, Range 40 – 94%
