Temporary Embargo of Liberty Island Database

June 28, 2023

The Lodi Fish and Wildlife Office has implemented a temporary embargo of the [Liberty Island Dataset](#) housed in the Environmental Data Initiative (EDI) data repository

(<https://portal.edirepository.org/nis/mapbrowse?packageid=edi.987.1>).

It was discovered that the larval fish (EDI file name “LI_larvaltrawl .csv”) and zooplankton (EDI file name “LI_Zoop_final.csv”) datasets did not go through a complete quality assurance/quality control (QA/QC) process before being uploaded to EDI in September 2021. Please note that the beach seine fish data (EDI file name “LI_seine.csv”) were completely QA/QC’d before posting to EDI in September 2021. The Liberty Island beach seine fish data are included in the Delta Juvenile Fish Monitoring Program’s data package and still available for download at <https://portal.edirepository.org/nis/mapbrowse?packageid=edi.244.11>

We extend our deepest apologies to the IEP community and other end users who have used or are using these data. We will inform you once the problems are resolved. Please contact [Jonathan Speegle](mailto:jonathan_speegle@fws.gov) (jonathan_speegle@fws.gov) if you have any questions or concerns.

Thank you,

The LFWO Data Management Team
