California Hospitals

Background

The information found in this data set was gathered from multiple sources. A list of Trauma Hospitals was found at http://www.emsa.ca.gov/emsdivision/trma_ctr.pdf. Additional hospitals were found using a GDT database. Another source was the California GNIS database. Finally, a search on the internet by county was conducted to find any remaining hospitals.

Next, addresses and phone numbers for the GDT and CAGNIS database hospitals were found on the internet.

After the initial list was gathered, it was typed into an Excel spreadsheet. Then each hospital was contacted by phone to verify that it was still in existence, the address and phone number was correct, and that it had emergency facilities. This information was last updated 12-2007.

The X,Y coordinates were found by inserting each address into DeLorme Street Atlas 2005.

This information was added to the Excel spreadsheet.

The Excel spreadsheet was saved as a .dbf 4 file then added as a table to a new data frame in ArcGIS 9.1. The X,Y coordinates were added and given the follow projection and coordinate system:

Projected coordinate system name: NAD_1983_California_Teale_Albers
Geographic coordinate system name: GCS_North_American_1983

This dataset includes coastal counties for the most part. A few inland county hospitals are included but not referenced.

Individual maps are by county with a description on the reverse side of each map giving the hospital name, address, phone number and trauma level.

What is the difference between a Level I, II, III, IV Trauma Center?

The four levels refer to the kinds of resources available in a trauma center and the number of patients admitted yearly. These are categories that define national standards for trauma care in hospitals. The American College of Surgeons developed and continues to recommend the standards and the California State Trauma Care Systems uses the levels in its regulations.

Level I

A Level I trauma center has a full range of specialists and equipment available 24-hours a day and admits a minimum required annual volume of severely injured patients. Additionally, a Level I center has a program of research, is a leader in trauma education and injury prevention, and is a referral resource for communities in neighboring regions (community outreach).

Level II

A Level II trauma center works in collaboration with a Level I center. It provides comprehensive trauma care and supplements the clinical expertise of a Level I institution. It provides 24-hour availability of all essential specialties, personnel and equipment. Minimum volume requirements may depend on local conditions. These institutions are not required to have an ongoing program of research or a surgical residency program.

Level III

A Level III trauma center does not have the full availability of specialists, but does have resources for the emergency resuscitation, surgery and intensive care of most trauma patients. A Level III center has transfer agreements with Level I and/or Level II trauma centers that provide back-up resources for the care of exceptionally severe injuries.

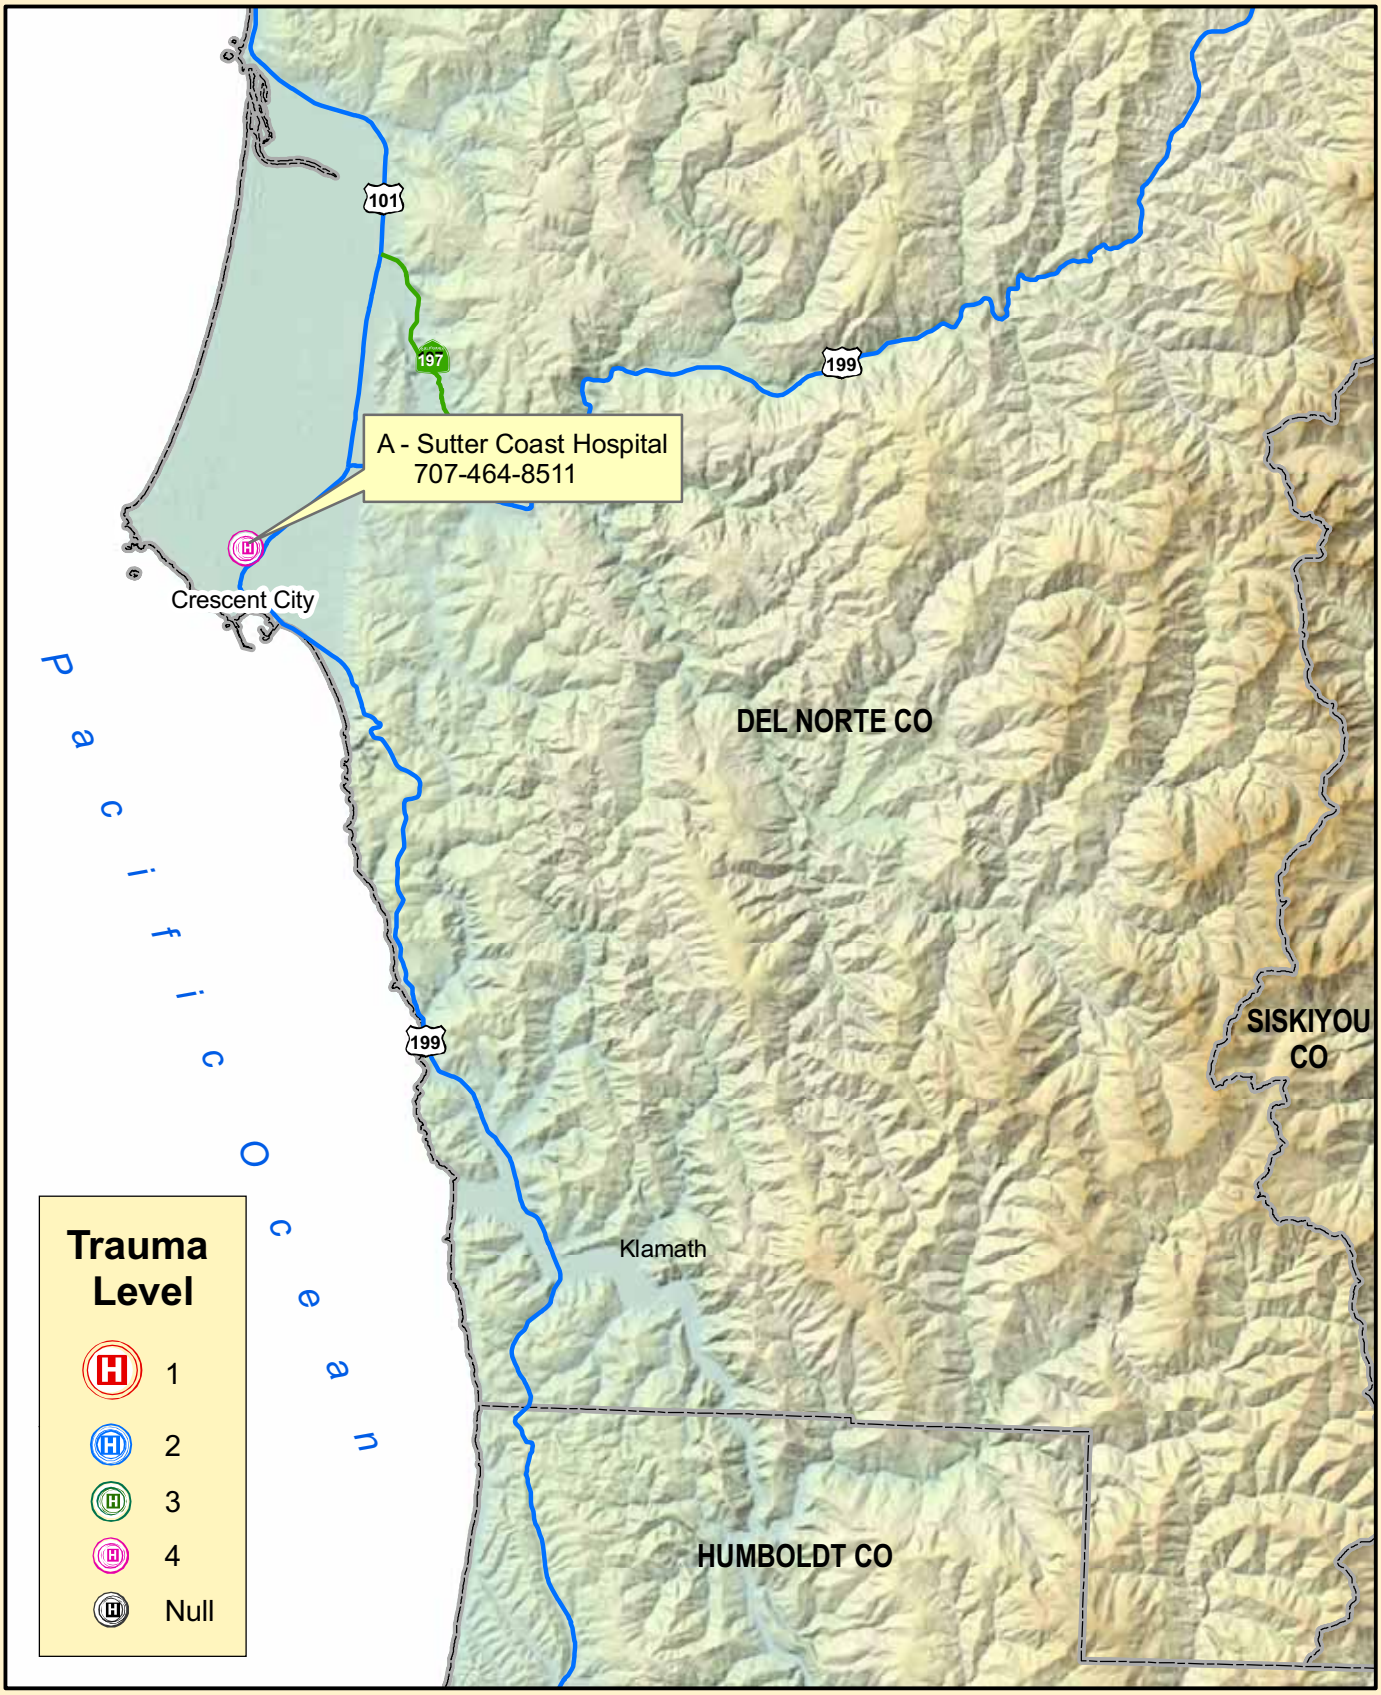

Level IV

A Level IV trauma center provides the stabilization and treatment of severely injured patients in remote areas where no alternative care is available.

Null

A null level is a designation we decided upon to denote a clinic or small hospital with no trauma center. It may or may not be open after hours and week ends.
