

Region 2 Barrier ID: W190 (Barrier).

Barrier Name: SR-89 Canyondam to Moccasin.

Linear Infrastructure: SR-89.

Geographic Area: Plumas County, SR-89 from Canyondam at Lake Almanor to Moccasin.

Length: 26.61 km (16.54 mi).

Target Species: Gray wolf (*Canis lupus*), deer (*Odocoileus hemionus*), mountain lion (*Puma concolor*), and black bear (*Ursus americanus*).

Connectivity Concerns: This stretch of SR-89 has observed animal vehicle collision and presence of wildlife on the highway. Migratory and resident deer in the Bucks Mountain, Sloat, and East Tehama deer herds cross the highway to meet daily and seasonal needs. Wildlife, including wolves, are present and there are few options to get under the highway.

Remediation Goals: Expand and enhance existing infrastructure such as culverts and creek/river bridges, add new wildlife crossing structures and wildlife exclusion fencing.

Figure: SR-89 from Canyondam to Moccasin is a Region 2 wildlife connectivity barrier.
