Figure 3-1. Commercial landings (metric tons) of California abalone fishery (bars), combined (top), and by red, pink, green, black, and white abalones. Landings are divided into periods (A-D) by trends in the total fishery landings, with regression lines (dotted lines) for each period (m=slope, t x year-1). Regressions are provided for individual species where sufficient data exists. The average annual value of all species (US $ per kilogram) is represented by a solid line.
