

## Southern California Catch by Fishing Location, 1991-1998

compiled 5/99, updated 6/00

1993-98 Red Sea Urchin receipts, catch and exvessel value by catch location from CMASTR

Catch locations determined from grouped block data. Blank or improbable block fields were distributed to other locations proportionally.

Shared blocks 689 and 710 distributed to islands using logbook data.

Lbs/Rcpt is a measure of CPUE, but receipts do not always represent one diver, especially prior to minimum landing requirements established in 1990

Exvessel value determined from price\*pounds for each receipt. Annual average price was used for blank price fields.

Annual totals may not match published totals for so. California ports due to out of region catches landed at so. Calif. ports.
