

Table 1.3-2. Possible scenario of implementation of management measures and tools on a regional basis ¹			
	Current	Short-term	Long-term
Management measures			
Harvest control rules	Statewide	Statewide	Statewide or by region
Marine reserve areas	Current MLPA process	By region - phased in	By region
Allocation	Statewide	Statewide	Statewide or by region
Restricted access	Under development	Statewide - phased in	By region
Management tools			
For example, size limits, bag/trip limits, seasonal closures	Statewide for state managed species; by region for Council managed species	By region - some phase in may be required	By region

Note: 1. This scenario applies to the approaches, not to the specific management regulations. For example, each region might have a different harvest level for a specific species, but these harvest levels would be calculated using the same statewide harvest control rule. In the long-term, however, as some species move from being data-poor to data-moderate, the harvest control rules might shift to different stages which might then be applied regionally.
