Yolo Wildlife Area: An Evolving Model for Integration of Agriculture and Habitat Restoration in a Flood Control Setting

Yolo Basin Foundation

***Applicant amount requested:* \$1,231,400**

***Fund This Amount:* \$0**

The four components of this proposal are disconnected. The rice rotations being considered seem appropriate for refuges, but likely lack applicability to rice growers in general. The experimental design in the proposal needs to be significantly improved. The proposal would also benefit from involving UC experts - both agronomists and economists. The panel, therefore, recommends "do not fund" for this proposal.
