In keeping with its mission, DFG is committed to minimizing to the maximum extent practical, negative effects of climate change on the state’s fish, wildlife, and habitats through the development of adaptation and mitigation measures, policies, and practices that provide clear benefits to terrestrial and marine ecosystems. The Climate Science Program (CSP) was created in 2008 as part of the Climate Science and Renewable Energy Branch to help the Department take these steps. Through an approach that embodies the theme Unity-Integration-Action, the Climate Science Program is laying the ground work for a proactive, adaptive, and collaborative approach to safeguarding California’s fish, wildlife, and habitats for years to come.

**Climate Science Program Initiatives**

**Building Collaborative Partnerships**
Creating and maintaining strong national, regional, and state-wide collaborations.

**Adaptation Planning and Action**
Preparing for climate change through adaptation planning and actions on the ground.

**Education and Outreach**
Increasing climate literacy through education and outreach.

**Sustainability at DFG**
DFG Going Green: Reducing our carbon footprint through DFG’s sustainability initiative.
