

# Fieldstone Habitat Conservation Plan, Expansion 1, San Diego County

---

*Last updated: 8/6/2008*

The proposed funding is for a grant to The Conservation Fund to provide matching funds for federal grants to assist in the acquisition of 235 acres of land northeast of the City of Encinitas and south of the City of San Marcos. The purposes of the project are to protect critical habitat for the California gnatcatcher, southern maritime chaparral and southern willow scrub/brackish marsh habitats; to further implement the Department of Fish and Game's Natural Community Conservation Planning efforts in the area; and to enhance a general wildlife corridor between larger habitat areas.
