

California Wildlife Habitat Relationships System

California Department of Fish and Wildlife

California Interagency Wildlife Task Group

Lacustrine

Ranges represent maximum, current geographic extent for each CWHR habitat type; their purpose is to show limits of distribution only. Although informed by spatially explicit data on vegetation and land use, they are not intended to replace any such mapping effort at any scale in California. Any given habitat type does not occur evenly throughout its mapped range. Images for habitat ranges were originally published in: Mayer, K.E. and Laudenslayer, Jr., W. F. eds. 1988. A Guide to Wildlife Habitats of California. California Depart. of Forestry and Fire Protection, Sacramento, California.
