

Name of Lake (for proposed dam): Shadow

County: El Dorado

National Forest: Eldorado

Drainage: Crag Lake, Meeks Creek, Lake Tahoe

Location: T. 13N, R. 17E, Section 7. 2 miles by road; 4.5 miles by trail (via Crag Lake) from Meeks Bay (Fallen Leaf Quad).

Ownership: U. S. Forest Service

Surface Acres: 4.5      Maximum depth: (shallow)      Elevation: 7900'

Engineering Survey Available: No

Type of Project: Stream flow maintenance dam.

Reason for not Constructing: Although additional flows in Meeks Creek would be desirable, construction of a stream flow maintenance dam could not be justified because of the small amount of storage available.

Remarks: Proposed under W.C.B. #1 program by Mt. Ralston Fish Planting Club. A lake level maintenance dam on this lake would probably improve the lake. The surface area of the lake would be increased considerably with a low (approx. 5') dam.
