

SMITH LAKE, EL DORADO COUNTY

August 22, 1985

This lake was checked on August 21, 1985. The valve was flushed and additional water released. The water level was down about 2½ feet. The valve needs to be cleaned of debris before it can be fully closed. The well needs some rock work. About one cubic feet of rock and mortar is suspended in a way that could be hazardous to vandals.

One family of three had caught three 9-inch B.K. Another party had two or three similar B.K. All anglers were using grasshoppers.
