Dear Sirs:

On Wednesday, April 26, Warden Hugh Thomas and Fisheries Manager Allen Pollitt witnessed the flushing operations of the South Fork of Silver Creek below Ice House Reservoir Dam in El Dorado County. The flushing operations were designed to correct the siltation and debris damage to the stream which occurred during construction. Our representatives report that while they do not feel perfection was achieved, the flushing operations were very successful in correcting the major portion of the damage. They join me in extending our commendations for your excellent courtesies and cooperation in this project.

Our representatives were extremely impressed with the courtesies and service rendered by Mr. William Stinchfield and Mr. Richard Deming of your firm.

Sincerely yours,
