Subject: Taylor Creek Rainbow Trout Spawning Run Survey

On April 21, 1968 Seasonal Aid Kim Rushton surveyed Taylor Creek from its mouth to the Fallen Leaf Lake dam to enumerate the rainbow spawning run. The flow was estimated to be about 25 cfs. and no barriers were seen. A total of 61 RT spawners were seen; 7 of which were below the Hwy. 89 bridge, and 54 above. The estimated length frequencies are as follows:

<u>F.L. (inches)</u>	<u>Number</u>
12	7
14	14
16	23
18	9
20	6
22	<u>2</u>
	61
