Comments/Issues:

Companion Plans - I think "Air" is also a plan, especially related to prescribed burning to restore fire + habitat resiliency to fire. CARR + USFS have smoke plans that might be too restrictive to implement burns in an effective manner (costs + limited time to burn).

The SWAP could be a facilitator for info sharing among agencies focused on similar resource management. Maybe a monitoring data clearinghouse that could be funded + used by fed, state + local agencies.

I'm concerned about some regulation/policy regarding avoidance measures to protect species (of concern) which can actually contribute to the detriment of the species. For example, Navaritia a flower that needs disturbance (bare soil) including fire, but is avoided when what it actually needs is some disturbance (treatment).

I'm also interested in the bibliography

Please use additional sheets if necessary.
