AERO SB
 projectiles are
 approved for
 both big game
 and non-game
 hunting in
 Condor range.

AERO SOLR,
 SOSR, SORN,
 and SO
 projectiles are
 only approved
 for non-game
 hunting in
 Condor range.

AERO SB (small banded) = lead free grooved deformation bullet made from 99% pure copper

AERO SB is certified for both big game and non-game hunting in Condor range.

AERO SOLR (solid long range) = lead free grooved long range solid bullet made from 99% pure copper

AERO SOLR is only certified for non-game hunting (not for big game) in Condor range.

AERO SOSR (solid Scharfrand) = lead free grooved solid bullet with Semi Wadcutter (Scharfrand) Design made from 99% pure copper

AERO SOSR is only certified for non-game hunting (not for big game) in Condor range.

AERO SORN (solid round nose) = lead free grooved solid bullet with Round Nose Design made from 99% pure copper

AERO SORN is only certified for non-game hunting (not for big game) in Condor range.

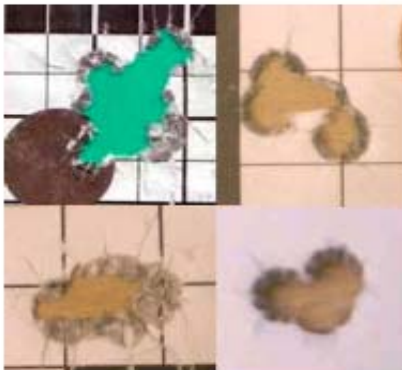

Das Standardgeschöß (3.v.l.) kann auf Kundenwunsch auch modifiziert geliefert werden. Quelle: "Der Anblick" - 07.2007

AERO SB bullets with hollow point can be ordered with different hollow point depth. So it's possible to fit the impact characteristic of the bullet to your requirements.

AERO Bullets are grooved so it rise up the accuracy for a longer time without cleaning. Copper can be removed with standard solvents - the best solvent we suggest is KG-12 bigbore cleaner and JB-bore paste.

AERO bullets offer the best accuracy in all caliber types. And due to the bullets are turned and not pressed, the accuracy and impact characteristic is always the same and does not change from lot to lot.

AERO Bullets are designed on 3D CAD, calculated, programed on new Siemens CNC and manufactured on brand new automatized CNC machines.

Worldwide Uniquely: we also offer a "bullet custom shop". That means: for a unique fee of 150 € we design a bullet for you, write a programm and you can permanent order the bullets in a minimum lot size of only 100 pcs !!!
