REPORT OF THE 1974 GAME TAKE HUNTER SURVEY

Hunter game take questionnaires were mailed to 22,283 hunting licensees in January 1975. A total of 870 questionnaires were returned undelivered making a total possible response of 21,413. This was a randomly selected sample of 3.2 percent of the estimated 661,000 hunting license purchasers in 1974.

A total of 9,828 usable questionnaires was returned; a response of about 46 percent. The sample indicated that there was hunting effort by about 594,400 hunting licensees who spent some 9,428,600 days in the field.

HUNTING REGULATION CHANGES

Quail

The daily bag and possession limit in the southeastern portion of the State was increased from six to ten birds.

Red-Legged Partridge (Chukar)

The daily bag and possession limit was increased from four to six birds statewide.

Turkeys

The Counties of Alpine, Amador, Butte, Calaveras, El Dorado, Lake, Mendocino, Placer, Santa Clara and Santa Cruz were added to the spring turkey season. The dates were shifted so that the season opened and closed one week earlier than the previous year.

The number of counties open to fall turkey hunting was increased to 32. Included were all the counties open during the 1974 spring season with the addition of all of the counties within the Department's administrative Region 3. The length of the fall season was increased by one week over the previous year.

Jackrabbits

The Counties of Imperial, Inyo, Los Angeles, Riverside, San Bernardino and portions of Kern were closed to jackrabbit hunting from February 1 to June 30.

Deer

The northeastern, inland and late deer seasons were shortened by one week for the regular season. The archery season in these areas opened one week later than in 1973.

Bear

An early bear season ran from September 21 through December 15 in the Counties of Lake, Marin, Mendocino, Napa, Solano, Sonoma and portions of Colusa, Humboldt and Yolo. The season remained unchanged in the balance of the State. The archery bear season opened one week later than in 1973.

Ducks

There was no split season in 1974. The statewide bag limit was set at five ducks plus two additional pintail. In that portion of the State not included in northeastern California, southern California or the Colorado River zone, a maximum of two redheads could be taken daily. There was a special closure in southern California on the eastern portion of Big Bear Lake, San Bernardino County.

It is of importance to realize that, due to the statistical bias inherent in surveys of this type, the principal value of the total bag figures included in this report is the indication of game bag trends. The respondents to this survey represent about one percent of the total hunting license buying public; consequently, those species of game which attract the smallest number of hunters tend to be more seriously affected by sampling bias and the results may or may not be valid from year to year. The primary use of these survey results is to compare this season with last season and with long-range trends.

The estimated total hunting license sales divided by the number of questionnaires returned, provided the projection factor for calculating total figures. The projection factor used for the 1974-75 hunting season calculations was $661,000 \div 9,828 = 67$.

BAG BY SPECIES

UPLAND GAME

| <u>PHEASANTS</u> | <u>1973</u> | <u>1974</u> | <u>Change from 1973</u> |
|----------------------|-------------|-------------|-------------------------|
| Statewide Bag | 638,900 | 776,300 | +22% |
| Hunters Reported | 212,900 | 228,900 | + 8% |
| Average Seasonal Bag | 3.0 | 3.4 | +0.4 |
| Total Days Hunted | 776,400 | 846,100 | + 9% |
| Average Days Hunted | 3.6 | 3.7 | +0.1 |

The 22 percent increase in the 1974 pheasant bag over last year was attributed to the second consecutive year of improved production rates from the low of 1972. This increase reflected the marked increase in pheasants bagged in the principal pheasant producing areas of the Sacramento Valley. This area showed an average increase of 38 percent over the reported bag in 1973 and accounted for 39 percent of the statewide bag. In comparison, the San Joaquin Valley area showed an increase in bag of nine percent while accounting for 28 percent of the statewide bag.

The early prediction of a good 1974 pheasant season was reflected in an eight percent increase in hunters.

| <u>QUAIL</u> | <u>1973</u> | <u>1974</u> | <u>Change from 1973</u> |
|----------------------|-------------|-------------|-------------------------|
| Statewide Bag | 1,774,300 | 2,188,400 | +23% |
| Hunters Reported | 173,700 | 189,400 | + 9% |
| Average Seasonal Bag | 10.2 | 11.6 | +1.4 |
| Total Days Hunted | 783,800 | 868,200 | +11% |
| Average Days Hunted | 4.5 | 4.6 | +0.1 |

The second consecutive year of improved production rates, especially in the southern portion of the State, resulted in a 23 percent increase in the quail bag over that reported in the 1973 hunter survey. Winter rains provided excellent feed conditions in the desert and foothill

areas. Also contributing to the increase in bag was a reported increase of nine percent in the number of hunters in the field. The southern San Joaquin Valley area recorded an increase in bag of 60 percent over 1972 results while that area south of the Tehachapi Mountains showed an increase in bag of 74 percent.

| <u>DOVES</u> | <u>1973</u> | <u>1974</u> | <u>Change from 1973</u> |
|----------------------|-------------|-------------|-------------------------|
| Statewide Bag | 4,350,200 | 4,551,100 | + 5% |
| Hunters Reported | 252,100 | 255,100 | + 1% |
| Average Seasonal Bag | 17.3 | 17.8 | +0.5 |
| Total Days Hunted | 1,038,400 | 1,020,800 | - 2% |
| Average Days Hunted | 4.1 | 4.0 | -0.1 |

The five percent increase in the 1974 dove bag over that reported in 1973 was largely attributed to excellent hunting in the southern San Joaquin Valley area where an increase in take of 10 percent was noted. The area south of the Tehachapi Mountains was down 15 percent from the 1973 level. These two geographical units accounted for over 54 percent of the statewide dove bag. The take in most northern areas was down due to early migration, except in the extreme northern end of the Sacramento Valley where the reported bag was up 37 percent.

| <u>BAND-TAILED PIGEONS</u> | <u>1973</u> | <u>1974</u> | <u>Change from 1973</u> |
|----------------------------|-------------|-------------|-------------------------|
| Statewide Bag | 271,600 | 209,900 | -23% |
| Hunters Reported | 39,400 | 38,600 | - 2% |
| Average Seasonal Bag | 6.9 | 5.4 | -1.5 |
| Total Days Hunted | 118,700 | 103,900 | -13% |
| Average Days Hunted | 3.0 | 2.7 | -0.3 |

The 1974 hunter survey indicated a 23 percent decline in the reported pigeon bag. The lower harvest was partially attributed to the birds being widely scattered throughout their range due to a general abundance of feed. The south coastal Counties of Monterey, San Luis Obispo and Santa Barbara did provide fair to good hunting and accounted for 32 percent of the statewide bag.

The duck harvest as reported by the hunter survey was up 43 percent from 1973. This increase reflected the preseason forecasts from the northern breeding grounds that bird numbers, especially pintail, would

be up substantially. Also contributing to the increased harvest was the fact that rainfall was low during the fall and early winter months. No flooding of the river bypasses or low lying areas occurred until late in the year. As a result, birds were concentrated on the managed waters and were more available to hunters.

| Deer Tag Sales | 387,400 | 353,600 | - 9% |

The deer take as measured by both tag returns and hunter survey showed a significant decrease in 1974 from the 1973 figures. This decline reflected a continued decrease in deer populations along with a decrease in deer tag sales and hunter effort brought about by a shortened season in most of the State. The early season take as measured by tag returns was down 23 percent and the late season take was down 25 percent.

There were about 36,000 archery deer hunters reported for 1974, about one percent more than the 35,600 reported in 1973.

Due to inadequate sampling procedures in the hunter survey as it relates to bear hunters, a separate survey of bear hunters was initiated in 1973. That survey produced reliable information by adequately sampling the bear hunter population and eliminating nonresponse bias. The 1973 survey indicated a bear take of 1,271. The survey was conducted again for the 1974 season. Results are not yet available.
