**REPORT OF THE 1993 GAME TAKE HUNTER SURVEY**

Hunter game take questionnaires were mailed to 18,000 randomly selected hunting licensees in January 1994. These individuals represented approximately 5.0 percent of the total number of licenses sold (361,684) in 1993. Two follow-up mailings were sent to nonrespondents after the initial mailing. There were 440 questionnaires returned undeliverable, which left a total of 17,560 possible respondents. A total of 8,728 persons returned the questionnaire, representing approximately 2.4 percent. It was determined through the analysis of the survey that there was a hunting effort of approximately 361,684 hunting licensees who spent 6,589,548 days in the field.

For the past several years, follow-up mailings to nonrespondents have significantly increased response to the questionnaires. The increase reduces nonresponse bias, the phenomenon of more successful individuals (e.g., hunters) being more inclined to return a questionnaire than unsuccessful or nonparticipating individuals. Nonresponse bias is one of the principle causes of inflated bag and hunter-use figures in surveys of this type. However, statistical analysis of survey data indicated high validity for species pursued by large numbers of hunters.

Coots	2,403	497	2,900	82.9	17.1	0.8

All Hunters = 361,684

Due to one hunter often hunting more than one species, the percent of All Hunters per species totals to more than 100% and the number of hunters per species exceeds the total number of hunters reported (361,684). Also, the total number of hunters (Table 7) for each species will be lower than the total number of hunters by county (Table 9), because one hunter might hunt in more than one county for a given species.
