REPORT OF THE 1995 GAME TAKE HUNTER SURVEY

Hunter game take questionnaires were mailed to 18,000 randomly selected hunting licensees in January 1996. These individuals represented approximately 5.2 percent of the total number of licenses sold (342,920) in 1995. One follow-up mailing was sent to nonrespondents after the initial mailing. There were 1,145 questionnaires returned undeliverable, which left a total of 16,855 possible respondents. A total of 10,431 persons returned the questionnaire, representing approximately 3.0 percent. It was determined through the analysis of the survey that there was a hunting effort of approximately 342,920 hunting licensees who spent 4,890,744 days in the field.

For the past several years, follow-up mailings to nonrespondents have significantly increased response to the questionnaires. The increase reduces nonresponse bias, the phenomenon of more successful individuals (e.g., hunters) being more inclined to return a questionnaire than unsuccessful or nonparticipating individuals. Nonresponse bias is one of the principle causes of inflated bag and hunter-use figures in surveys of this type. However, statistical analysis of survey data indicated high validity for species pursued by large number of hunters. For more information concerning this survey please contact Daniel P. Connelly (916-653-6640) or D. Sam Blankenship (916-653-1759). Since 1992, this survey has been a cooperative effort between the Wildlife Management Division and the License Revenue Branch.

Note: The hunting licensees selected for the 1995 survey were taken from 1993, 1994, and 1995 license sales data. This action was contrary to the survey protocol and due to an inadequate number of 1995 sales data available on a data base at the time of the initial survey.

			All Hunters = 342,920			
Due to one hunter often hunting more than one species, the percent of All Hunters per species totals more than 100% and the number of hunters per species exceeds the total number of hunters reported (342,920). Also, the total number of hunters (Table 7) for each species will be lower than the total number of hunters by counts (Table 9) because one hunter might hunt in more than one county for a given species.

*Note: The inflated value in the "did not hunt" category is most likely related to the effect of using 1993, 1994, and 1995 license sales data. The three successive years of data were used because an inadequate number of 1995 sales data available on a data base at the time of the initial survey.
