Talked to Don Kelley on Feb 9, 1961:

On Feb. 3, 1961, and unknown person
pulled 2 boards from the dam on Echo Lake.
This permitted toxic water to flow into U.T.R.

- ① Don.W. put boards back in
- ② DWK. estimates that 15-20,000 trout were killed
- ③ Unusually warm, wet winter didn't help.
- ④ Region will conduct weekly assays for rotenone + toxicity to determine when it will be safe to release water.
