Subject: Diversion Dam, Upper Truckee River

I recently had a meeting with the El Dorado County Engineer, Mr. Ron Brazil, in regards to the Diversion Dam on the Barton property, near Tahoe Airport.

His original plans were to place the boards in the dam and leave them until such time the Bartons took over the control and operation of the Dam.

He agreed to leave out the majority of the boards, some had already been installed. The pressure of high water at this time makes it almost impossible to remove a board after it has been placed in the slots. The rest of the boards will be left out until August 1, 1964 and will then be in for one month only.

If they live up to this agreement, I do not feel that we will have any problem. I plan to observe this dam fairly often to see if it stays open. At least for the present, I do not see that any other action need be taken.
