No. _____

Name of stream or lake Lower Twin Lake Tributary to _____ River system _____
 Other names _____ County Eldorado Township _____ Range _____ Section _____
 Stream section: _____ From: _____ To: _____ Length of stream section: _____
 Sources of data: _____

9-8-44 Fair

Dams could be raised 2 ft, killing almost no timber, and with very little work. Spill would then be out low spot south of present dams (1 small dam, 1 large dam), a natural spillway, no construction needed. Added storage of 2 ft on dam would be a little more in A. ft than 2* present surface area- additional evaporation would be little. Now overflowing, check dam gate shut. Lake has rocky shore, naturally barren, but dam backs water over little flats whose vegetation is starting. Present method of holding Present method of holding Upper and Lower Twin up to overflow while releasing water through them from Island is good for vegetation in Twins. Bralliar has transplanted sedge from Wright's here. For lake flow in and out of lake see Up-Twin
