

Memorandum

To : J. Richard

Date: July 2, 1979

From : Department of Fish and Game

Subject: Kokanee Egg Supply, 1979

1. What is the potential kokanee spawning run in Junction Reservoir and Union Valley.
2. Jim Richard should net Junction. He should do this in late summer (September). If a potential egg source exists it can be tagged for our needs. This is important.
3. He should check with SMUD to determine when Kok concentrate at Robbs Peak P.H.
4. Jim should contact Decoto and Jack Hanson for location of Merwin traps and arrange to get one, have it repaired and be ready to install it in Union Valley or Junction before the run starts probably sometime in November, but maybe earlier.
5. This will be Jim's most important assignment from late September-on until the run ends.
6. Jim should think this through and consider how best to obtain a source of eggs for management needs. He should set up a plan for review of Ryan and Beland by September 1.
