Fisheries Manager III

Hatcheries - General

Union Valley Reservoir, Kokanee Salmon, 1965

Union Valley Reservoir and tributaries were checked weekly from September 16, 1965 to October 15, 1965, with no fish seen in spawning condition or in tributaries.

Kokanee salmon taken by anglers on October 15, 1965, in the lake were silvery color. No red color seen. All tributaries still negative.

I feel it can be safely assumed the kokanee in Union Valley Reservoir will not spawn until the fall of 1966.
