

# Reading Rock State Marine Reserve

Northern California Marine Protected Areas (MPAs), *Implemented December 2012*

## Site Overview

Photos are representative of the North Coast Region and may not be within this MPA.

### What is an MPA?

MPAs are a type of [marine managed area](#) (MMA) where marine or estuarine waters are set aside primarily to protect or conserve marine life and associated habitats. California has a coastal network of 124 protected areas designed to help increase the coherence and effectiveness of protecting the state's marine life, habitats, and ecosystems. The network includes three types of MPA: [state marine reserve](#) (SMR), [state marine conservation area](#) (SMCA), and [state marine park](#) (SMP); one MMA: [state marine recreational management area](#) (SMRMA); and [special closures](#). There are 119 MPAs, 5 MMAs and 15 special closures, each with unique boundaries and regulations in the network. Non-consumptive activities, restoration, and permitted scientific research are allowed.

### What is an SMR?

An **SMR** is a type of MPA that protects resources by prohibiting the recreational and/or commercial take of all marine resources. (Area restrictions are defined in [Title 14, Section 632\(a\)\(1\)\(A\)](#)).

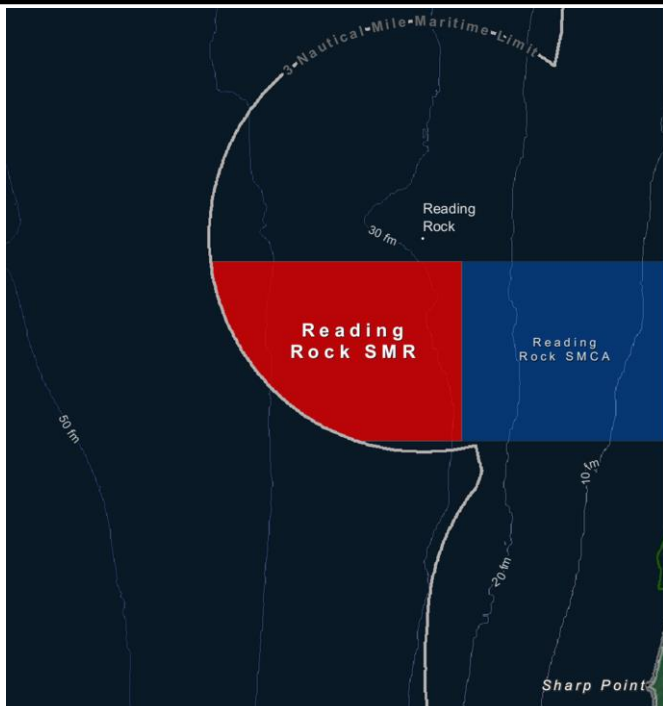

### Reading Rock SMR Overview

- **MPA size:** 9.60 square miles
- **Depth range:** 145 to 253 feet
- **Along-shore span (shoreline):** 2.9 miles

### Reading Rock SMR Key Habitats

- **Sand (all depth):** 9.43 square miles
- **Rock (all depth):** 0.16 square miles
- **Unidentified (all depths):** 0.01 square miles

### Where is Reading Rock SMR?

### Boundaries and Regulations

**Boundary:** This area is bounded by straight lines connecting the following points in the order listed except where noted:

41° 20.100' N. lat. 124° 10.000' W. long.;  
41° 20.100' N. lat. 124° 14.655' W. long.;

thence southward along the three nautical mile offshore boundary to

41° 17.600' N. lat. 124° 11.963' W. long.;  
41° 17.600' N. lat. 124° 10.000' W. long.; and  
41° 20.100' N. lat. 124° 10.000' W. long.

**All take is prohibited in Reading Rock SMR.**

## How and Why Reading Rock was Chosen for an SMR

MPAs were designed through a collaborative, regional public process by a cross-interest regional stakeholder group (RSG). Using scientific criteria, public input and local resource knowledge the RSG developed MPA proposals. Proposals included site specific rationale (why the site should be an MPA-*included below*), the classification (type of MPA), boundaries, and regulations. Final MPA proposals were sent to the California Fish and Game Commission (Commission) for their adoption process. Reading Rock SMR was adopted by the Commission in 2012.

### **North Coast RSG Identified Rationale for Reading Rock SMR:**

Backbone MPA captures soft 30-100 m habitat and hard 30-100 m habitats at the very high level of protection. Clustered with Reading Rock SMCA with beaches, rocky shores and soft 0-30 m and is adjacent to Redwood National and State Park lands. Habitat captured here protects both fish species as well as marine mammals.

## Species Likely to Benefit from the Establishment of MPAs in California

Species likely to benefit from establishing an MPA are those, whose home range, behavior, reproduction, exploitation rate or population status indicates that they may benefit from spatial management. This includes species that are directly targeted by fisheries, those which are caught incidental to fishing for the target species (bycatch) and which cannot be returned to the water with a high rate of survival, and those which may be indirectly impacted through ecological changes within MPAs.
