

City of Yreka Post-Restoration Management

Organization: Shasta Valley Resource Conservation District

Project Period: May 2014 – December 2019

Amount: \$60,820.00

Location: Yreka Creek, Siskiyou County

Project Description: This project provides support for post-restoration management to control invasive weeds and maintain vegetation efforts at three City-owned project areas including Greenhorn Creek, North Yreka Creek Site, and Oberlin Site on Yreka Creek.

Progress: This project is in its final year and is on track to be completed. This project allowed the California Conservation Corps to maintain revegetation efforts at 3 City-owned sites in which restoration work was recently completed, allowing for long-term success of the restoration actions. This work primarily included invasive weed removal, blackberry removal, removal of trash, maintenance of plants and beaver protection and plant care at a native plant nursery. Shasta RCD is coordinating with the City of Yreka to help support City park staff to maintain the creek sites and parkways at Greenhorn Park and the Yreka Creek public trail.
