What is a California marine protected area (or “MPA”)?
An MPA is a type of managed area whose main purpose is to protect or conserve marine life and habitats in ocean or estuarine waters. California’s MPA Network consists of 124 areas with varying levels of protection and 14 special closures, all designed to help safeguard the state’s marine ecosystems. Most marine conservation areas such as Salt Point State Marine Conservation Area provide some opportunity for commercial and/or recreational take (species and gear exceptions vary by location - see reverse).

One goal for California’s MPAs was to strategically place them near each other to form an interconnected network that would help to preserve the flow of life between marine ecosystems. Within that network each MPA has unique goals and regulations, and non-consumptive activities, permitted scientific research, monitoring, and educational pursuits may be allowed.

Why was this location chosen for a state marine conservation area?
One of the goals for Salt Point State Marine Conservation Area is to protect the rocky reef, sandy seafloor and kelp forest habitats found there. Rock walls rise up from the sandy bottom, dotted with large anemones and encrusting sponges, while halibut find camouflage on the sandy seafloor. The intertidal zone teems with sea stars, chitons, crabs, and aggregating anemones. Beneath the surface, forests of bull kelp provide habitat and food for blue rockfish, perch, cabezon, and red abalone. Gray whales may be seen migrating seasonally through the conservation area’s deeper waters.

Salt Point State Marine Conservation Area shares an eastern border with Gerstle Cove State Marine Reserve, and a land-side border with Salt Point State Park. The conservation area also overlaps a portion of the Greater Farallones National Marine Sanctuary. Placing a state marine conservation area here provides moderately high levels of protection for marine life and the habitats they use.

Quick Facts: Salt Point State Marine Conservation Area
- MPA size: 1.84 square miles
- Shoreline span: 2.8 miles
- Depth range: 0 to 226 feet
- Habitat composition:
  - Sand/mud: 0.58 square miles
  - Rock: 1.23 square miles
  - Other: 0.03 square miles
