## Site Overview

Photos are representative of the North Central Coast Region and may not be within this MPA.

### What is an MPA?

MPAs are a type of [marine managed area](#) (MMA) where marine or estuarine waters are set aside primarily to protect or conserve marine life and associated habitats. California has a coastal network of 124 protected areas designed to help increase the coherence and effectiveness of protecting the state's marine life, habitats, and ecosystems. The network includes three types of MPA: [state marine reserve](#) (SMR), [state marine conservation area](#) (SMCA), and [state marine park](#) (SMP); one MMA: [state marine recreational management area](#) (SMRMA); and [special closures](#). There are 119 MPAs, 5 MMAs and 15 special closures, each with unique boundaries and regulations in the network. Non-consumptive activities, restoration, and permitted scientific research are allowed.

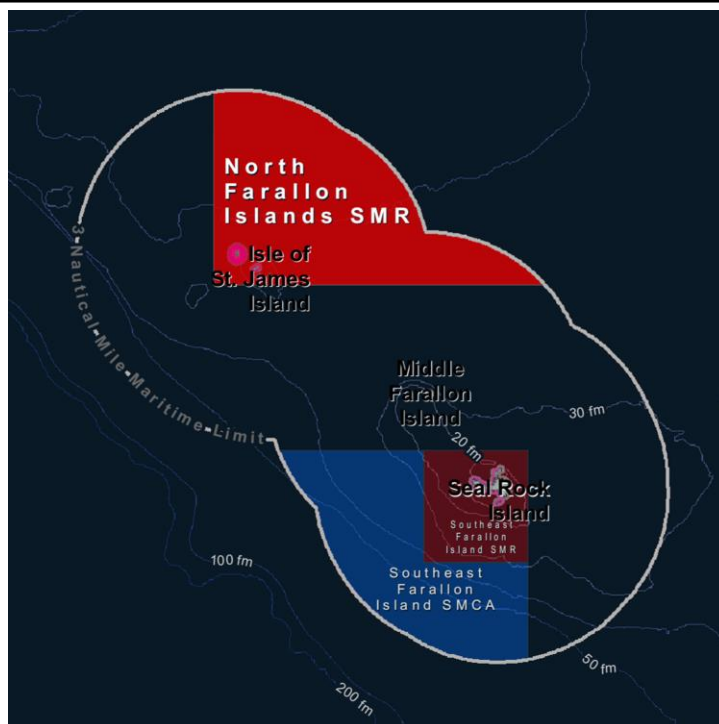

### What is an SMR?

An **SMR** is a type of MPA that protects resources by prohibiting the recreational and/or commercial take of all marine resources. (*Area restrictions are defined in [Title 14, Section 632\(a\)\(1\)\(A\)](#)*).

### North Farallon Islands SMR Overview

- **MPA size:** 18.07 square miles
- **Depth range:** 0 to 275 feet

### Where is North Farallon Islands SMR?

### North Farallon Islands SMR Key Habitats

- **Rocky shores:** 0.83 miles
- **Sand (all depths):** 15.9 square miles
- **Rock (all depths):** 2.17 square miles

### Boundaries and Regulations

**Boundary:** This area is bounded by straight lines connecting the following points in the order listed except where noted:

- 37° 45.700' N. lat. 122° 59.085' W. long.; thence northwestward along the three nautical mile offshore boundary to
- 37° 49.344' N. lat. 123° 7.000' W. long.;
- 37° 45.700' N. lat. 123° 7.000' W. long.; and
- 37° 45.700' N. lat. 122° 59.085' W. long.

**All take is prohibited in North Farallon Islands SMR.**

## How and Why North Farallon Islands was Chosen for an SMR

MPAs were designed through a collaborative, regional public process by a cross-interest regional stakeholder group (RSG). Using scientific criteria, public input and local resource knowledge the RSG developed MPA proposals. Proposals included specific objectives (why the site should be an MPA—*included below*), the classification (type of MPA), boundaries, and regulations. Final MPA proposals were sent to the California Fish and Game Commission (Commission) for their adoption process. North Farallon Islands SMR was adopted by the Commission in 2010.

### **North Central Coast RSG Specific Objectives for North Farallon Islands SMR:**

Include a portion of unique tidal, subtidal, benthic and pelagic habitat of Farallones. Help protect concentrations of prey & foraging predators—fish & breeding colonies of seabirds & marine mammals—at highly productive & unique mix of habitats. Further objectives of reserve to protect natural diversity & structure & function of unique marine ecosystem help assure continued recovery of ground fish enhance reproductive success of seabirds & marine mammals using islands & increase supply of large adults & larval fish which can disperse to adjacent areas for fisheries harvest outside MPA Protects globally significant biological site.

## Species Likely to Benefit from the Establishment of MPAs in California

Species likely to benefit from establishing an MPA are those, whose home range, behavior, reproduction, exploitation rate or population status indicates that they may benefit from spatial management. This includes species that are directly targeted by fisheries, those which are caught incidental to fishing for the target species (bycatch) and which cannot be returned to the water with a high rate of survival, and those which may be indirectly impacted through ecological changes within MPAs.

For a list of species likely to benefit from MPAs statewide: [www.dfg.ca.gov/marine/mpa/species.asp](http://www.dfg.ca.gov/marine/mpa/species.asp)
