Site Overview

Photos are representative of the North Central Coast Region and may not be within this MPA.

What is an MPA?

MPAs are a type of [marine managed area](#) (MMA) where marine or estuarine waters are set aside primarily to protect or conserve marine life and associated habitats. California has a coastal network of 124 protected areas designed to help increase the coherence and effectiveness of protecting the state's marine life, habitats, and ecosystems. The network includes three types of MPA: [state marine reserve](#) (SMR), [state marine conservation area](#) (SMCA), and [state marine park](#) (SMP); one MMA: [state marine recreational management area](#) (SMRMA); and [special closures](#). There are 119 MPAs, 5 MMAs and 15 special closures, each with unique boundaries and regulations in the network. Non-consumptive activities, restoration, and permitted scientific research are allowed.

What is an SMCA?

An **SMCA** is a type of MPA that protects resources by allowing for only specific types of recreational and/or commercial take to occur. (Area restrictions are defined in [Title 14, Section 632\(a\)\(1\)\(C\)](#)).

Stewarts Point SMCA Overview

- **MPA size:** 1.18 square miles
- **Depth range:** 0 to 134 feet
- **Along-shore span (shoreline):** 4.0 miles

Where is Stewarts Point SMCA?

Stewarts Point SMCA Key Habitats

- **Beaches:** 1.42 miles
- **Rocky shores:** 6.85 miles
- **Sand (all depths):** 0.03 square miles
- **Rock (all depths):** 0.67 square miles
- **Average kelp (1989 to 2008):** 0.01 square miles
- **Unidentified (all depths):** 0.45 square miles

Boundaries and Regulations

Boundary: This area is bounded by the mean high tide line and straight lines connecting the following points in the order listed:

38° 40.500' N. lat. 123° 25.345' W. long.;
38° 40.500' N. lat. 123° 25.500' W. long.;
38° 37.500' N. lat. 123° 23.500' W. long.; and
38° 37.543' N. lat. 123° 23.924' W. long.

Only the following take is allowed in Stewarts Point SMCA: recreationally from shore only: marine aquatic plants other than sea palm, marine invertebrates, [finfish](#) by hook and line, surf smelt by beach net, and species authorized in Section 28.80 of these regulations by handheld dip net.

Stewarts Point State Marine Conservation Area

How and Why Stewarts Point was Chosen for an SMCA

MPAs were designed through a collaborative, regional public process by a cross-interest regional stakeholder group (RSG). Using scientific criteria, public input and local resource knowledge the RSG developed MPA proposals. RSG proposals included specific objectives (why the site should be an MPA-*included below*), the classification (type of MPA), boundaries, and regulations. Final MPA proposals were sent to the California Fish and Game Commission (Commission) for their adoption process. Stewarts Point SMCA was adopted by the Commission in 2010.

North Central Coast RSG Specific Objectives for Stewarts Point SMCA:

None specified.

Species Likely to Benefit from the Establishment of MPAs in California

Species likely to benefit from establishing an MPA are those, whose home range, behavior, reproduction, exploitation rate or population status indicates that they may benefit from spatial management. This includes species that are directly targeted by fisheries, those which are caught incidental to fishing for the target species (bycatch) and which cannot be returned to the water with a high rate of survival, and those which may be indirectly impacted through ecological changes within MPAs.
