Natural Bridges State Marine Reserve
Central California Marine Protected Areas (MPAs), Implemented September 2007

Site Overview

What is an MPA?

MPAs are a type of marine managed area (MMA) where marine or estuarine waters are set aside primarily to protect or conserve marine life and associated habitats. California has a coastal network of 124 protected areas designed to help increase the coherence and effectiveness of protecting the state’s marine life, habitats, and ecosystems. The network includes three types of MPA: state marine reserve (SMR), state marine conservation area (SMCA), and state marine park (SMP); one MMA: state marine recreational management area (SMRMA); and special closures. There are 119 MPAs, 5 MMAs and 15 special closures, each with unique boundaries and regulations in the network. Non-consumptive activities, restoration, and permitted scientific research are allowed.

What is an SMR?

An SMR is a type of MPA that protects resources by prohibiting the recreational and/or commercial take of all marine resources. (Area restrictions are defined in Title 14, Section 632(a)(1)(A)).

Natural Bridges SMR Overview

- MPA size: 0.25 square miles
- Depth range: 0 to 10 feet
- Along-shore span (shoreline): 4.1 miles

Where is Natural Bridges SMR?

Boundary: This area is bounded by the mean high tide line and a distance of 200 feet seaward of mean lower low water between the following two points:

- 36° 57.912' N. lat. 122° 07.650' W. long.; and
- 36° 57.015' N. lat. 122° 03.504' W. long.

All take is prohibited in Natural Bridges SMR.
How and Why Natural Bridges was Chosen for an SMR

MPAs were designed through a collaborative, regional public process by a cross-interest regional stakeholder group (RSG). Using scientific criteria, public input and local resource knowledge the RSG developed MPA proposals. Proposals included specific objectives (why the site should be an MPA-included below), the classification (type of MPA), boundaries, and regulations. Final MPA proposals were sent to the California Fish and Game Commission (Commission) for their adoption process. Natural Bridges SMR was adopted by the Commission in 2007.

Summary Rationale for Natural Bridges SMR:
Provide complete protection to a rocky and soft bottom intertidal area in close proximity to a research institution and provide an opportunity for comparative studies here and in an adjacent non-MPA areas. This area would provide protection for intertidal species while allowing take of species outside the intertidal zone.

Species Likely to Benefit from the Establishment of MPAs in California

Species likely to benefit from establishing an MPA are those, whose home range, behavior, reproduction, exploitation rate or population status indicates that they may benefit from spatial management. This includes species that are directly targeted by fisheries, those which are caught incidental to fishing for the target species (bycatch) and which cannot be returned to the water with a high rate of survival, and those which may be indirectly impacted through ecological changes within MPAs.
