

Kashtayit State Marine Conservation Area

Southern California Marine Protected Areas (MPAs), *Established January 2012*

Site Overview

Photos are representative of the South Coast Region and may not be within this MPA.

What is an MPA?

MPAs are a type of [marine managed area](#) (MMA) where marine or estuarine waters are set aside primarily to protect or conserve marine life and associated habitats. California has a coastal network of 124 protected areas designed to help increase the coherence and effectiveness of protecting the state's marine life, habitats, and ecosystems. The network includes three types of MPA: [state marine reserve](#) (SMR), [state marine conservation area](#) (SMCA), and [state marine park](#) (SMP); one MMA: [state marine recreational management area](#) (SMRMA); and [special closures](#). There are 119 MPAs, 5 MMAs and 15 special closures, each with unique boundaries and regulations in the network. Non-consumptive activities, restoration, and permitted scientific research are allowed.

What is an SMCA?

An **SMCA** is a type of MPA that protects resources by allowing for only specific types of recreational and/or commercial take to occur.

Kashtayit SMCA Overview

- **MPA size:** 2.02 square miles
- **Depth range:** 0 to 160 feet
- **Along-shore span (shoreline):** 1.9 miles

Where is Kashtayit SMCA?

Kashtayit SMCA Key Habitats

- **Beaches:** 1.38 miles
- **Rocky shores:** 1.43 miles
- **Surfgrass:** 1.01 miles
- **Estuary:** 0.01 square miles
- **Sand (all depths):** 1.51 square miles
- **Rock (all depths):** 0.09 square miles
- **Unidentified (all depths):** 0.40 square miles

Boundaries and Regulations

Boundary: This area is bounded by the mean high tide line and straight lines connecting the following points in the order listed:

- 34° 28.13' N. lat. 120° 14.46' W. long.;
- 34° 27.30' N. lat. 120° 14.46' W. long.;
- 34° 27.30' N. lat. 120° 12.47' W. long.; and
- 34° 28.23' N. lat. 120° 12.47' W. long.

Permitted/Prohibited Uses: Take of all living marine resources is prohibited EXCEPT:

1. Only the following species may be taken recreationally: [finfish](#), invertebrates except rock scallops and mussels, and giant kelp (*Macrocystis pyrifera*) by hand harvest.
2. Take pursuant to maintenance of artificial structures and operation and maintenance of existing facilities is allowed inside the conservation area pursuant to any required federal, state and local permits, or as otherwise authorized by the department.

Kashtayit State Marine Conservation Area

How and Why Kashtayit was Chosen for an SMCA

MPAs were designed through a collaborative, regional public process by a cross-interest regional stakeholder group (RSG). Using scientific criteria, public input and local resource knowledge the RSG developed MPA proposals. RSG proposals included site specific rationale (why the site should be an MPA-*included below*), the classification (type of MPA), boundaries, and regulations. Final MPA proposals were sent to the California Fish and Game Commission (Commission) for their adoption process. Kashtayit SMCA was adopted by the Commission in 2012.

South Coast RSG Specific Rationale for Kashtayit SMCA:

This is intended as a heritage site with significant educational opportunities. Kashtayit SMP is contiguous to an existing State Park, Gaviota State Park, the traditional Chumash village site of Kashtayit. As a Traditional Cultural Place that plays a significant role in Chumash maritime culture, it is ideally suited for tribal co-management to promote 1) education and outreach, 2) marine stewardship, and Chumash maritime cultural preservation and revitalization. Kashtayit SMCA was recommended by the Blue Ribbon Task Force (BRTF) for the designation as a state marine park; it could subsequently be designated as a state marine park by the State Park and Recreation Commission at their discretion.

Species Likely to Benefit from the Establishment of MPAs in California

Species likely to benefit from establishing an MPA are those, whose home range, behavior, reproduction, exploitation rate or population status indicates that they may benefit from spatial management. This includes species that are directly targeted by fisheries, those which are caught incidental to fishing for the target species (bycatch) and which cannot be returned to the water with a high rate of survival, and those which may be indirectly impacted through ecological changes within MPAs.
