Site Overview

Photos are representative of the South Coast Region and may not be within this MPA.

What is an MPA?

MPAs are a type of [marine managed area](#) (MMA) where marine or estuarine waters are set aside primarily to protect or conserve marine life and associated habitats. California has a coastal network of 124 protected areas designed to help increase the coherence and effectiveness of protecting the state's marine life, habitats, and ecosystems. The network includes three types of MPA: [state marine reserve](#) (SMR), [state marine conservation area](#) (SMCA), and [state marine park](#) (SMP); one MMA: [state marine recreational management area](#) (SMRMA); and [special closures](#). There are 119 MPAs, 5 MMAs and 15 special closures, each with unique boundaries and regulations in the network. Non-consumptive activities, restoration, and permitted scientific research are allowed.

What is an SMCA (No Take)?

An **SMCA (No-Take)** is a type of MPA that protects resources by prohibiting commercial and recreational take while allowing take incidental to the permitted operation and maintenance of artificial structures inside the SMCA.

Goleta Slough SMCA (No Take) Key Habitats

- **MPA size:** 0.16 square miles
- **Depth range:** 0 to 10 feet
- **Beaches:** 0.14 miles
- **Tidal flats:** 0.56 miles
- **Coastal marsh:** 2.73 miles
- **Marsh:** 0.11 square miles
- **Estuary:** 0.16 square miles
- **Unidentified (all depths):** 0.16 square miles

Boundaries and Regulations

Boundary: This area includes the waters below the mean high tide line within Goleta Slough

Only the following take is allowed in Goleta Slough SMCA: Take pursuant to routine maintenance, dredging, habitat restoration, research and education, maintenance of artificial structures, and operation and maintenance of existing facilities in the conservation area per any required federal, state and local permits, or activities pursuant to Section 630, or as otherwise authorized by the department.

In waters below the mean high tide line inside the Goleta Slough Ecological Reserve as defined within Section 630, the following restrictions apply:

1. Boating, swimming, wading, and diving are prohibited.
2. No person shall enter this area and remain therein except on established trails, paths or other designated areas except department employees or designated employees of Santa Barbara Airport, City of Santa Barbara, Goleta Sanitary District and Goleta Valley Vector Control District for the purposes of carrying out official duties.

Where is Goleta Slough SMCA (No Take)?

Goleta Slough State Marine Conservation Area (No-Take)

How and Why Goleta Slough was Chosen for an SMCA (No Take)

MPAs were designed through a collaborative, regional public process by a cross-interest regional stakeholder group (RSG). Using scientific criteria, public input and local resource knowledge the RSG developed MPA proposals. RSG proposals included site specific rationale (why the site should be an MPA-*included below*), the classification (type of MPA), boundaries, and regulations. Final MPA proposals were sent to the California Fish and Game Commission (Commission) for their adoption process. Goleta Slough SMCA (No Take) was adopted by the Commission in 2012.

South Coast RSG Identified Rationale for Goleta Slough SMCA (No Take):

This MPA provides an important estuary environment close to study opportunities. This area provides nursery area for juveniles and contains valuable habitat estuarine grasses. Provides foraging area for various bird species. Protecting this area from fishing impacts provides for more natural ecosystem function, protects the natural diversity and abundance of marine life, and the structure, function, and integrity of its included marine ecosystems and network function of the array as a whole, as below. It helps sustain, conserve, and protect marine life and avian populations. It improves educational, and study opportunities provided by marine ecosystems that are subject to minimal human disturbance. It protects marine natural heritage, including protection of representative and unique marine life habitats.

Species Likely to Benefit from the Establishment of MPAs in California

Species likely to benefit from establishing an MPA are those, whose home range, behavior, reproduction, exploitation rate or population status indicates that they may benefit from spatial management. This includes species that are directly targeted by fisheries, those which are caught incidental to fishing for the target species (bycatch) and which cannot be returned to the water with a high rate of survival, and those which may be indirectly impacted through ecological changes within MPAs.
