**What is a California marine protected area (or “MPA”)?**

An MPA is a type of managed area whose main purpose is to protect or conserve marine life and habitats in ocean or estuarine waters. California’s MPA Network consists of 124 areas with varying levels of protection and 14 special closures, all designed to help safeguard the state’s marine ecosystems. Most marine conservation areas such as Abalone Cove State Marine Conservation Area provide some opportunity for commercial and/or recreational take (species and gear exceptions vary by location - see reverse).

One goal for California’s MPAs was to strategically place them near each other to form an interconnected network that would help to preserve the flow of life between marine ecosystems. Within that network each MPA has unique goals and regulations, and non-consumptive activities, permitted scientific research, monitoring, and educational pursuits may be allowed.

**Why was this location chosen for a state marine conservation area?**

One of the goals for Abalone Cove State Marine Conservation Area is to protect the rocky reef, surfgrass, kelp forest, and sandy seafloor habitat found here. These habitats are used by a wide variety of fish and invertebrates, including kelp bass, California sheephead, and abalone. The conservation area is a mix of shallow nearshore and deep water habitats extending to over 2,200 feet deep.

The conservation area shares a western border with Point Vicente State Marine Conservation Area. Together the two conservation areas protect almost 20 square miles of ocean habitat. Placing a state marine conservation area here provides moderately high levels of protection for marine life and the habitats they use.

**Quick Facts: Abalone Cove State Marine Conservation Area**

- **MPA size:** 4.79 square miles
- **Shoreline span:** 1.5 miles
- **Depth range:** 0 to 2,237 feet
- **Habitat composition:**
  - Sand/mud: 4.65 square miles
  - Rock: 0.13 square miles
  - Other: 0.01 square miles

Abalone Cove State Marine Conservation Area
Southern California - Los Angeles County

Abalone Cove State Marine Conservation Area
Southern California - Established January, 2012

* Pelagic finfish are defined here as: northern anchovy (Engraulis mordax), barracudas (Sphyraena spp.), billfishes* (family Istiophoridae), dolphinfish (Coryphaena hippurus), Pacific herring (Clupea pallasii), jack mackerel (Trachurus symmetricus), Pacific mackerel (Scomber japonicus), salmon (Oncorhynchus spp.), Pacific sardine (Sardinops sagax), blue shark (Prionace glauca), salmon shark (Lamna ditropis), shortfin mako shark (Isurus oxyrinchus), thresher sharks (Alopias spp.), swordfish (Xiphias gladius), tunas (family Scombridae) including Pacific bonito (Sarda chiliensis), and yellowtail (Seriola lalandi).

*Marlin is not allowed for commercial take.

** Coastal pelagic species are defined here as: northern anchovy (Engraulis mordax), Pacific sardine (Sardinops sagax), Pacific mackerel (Scomber japonicus), jack mackerel (Trachurus symmetricus) and market squid (Doryteuthis [Loligo] opalescens).

Take may be authorized for research, restoration, and monitoring purposes under a scientific collecting permit. See California Code of Regulations Title 14, Section 632(a).

The information in this document does not replace the official regulatory language found in the California Code of Regulations Title 14, Section 632. View these regulations online at www.wildlife.ca.gov/Conservation/Marine/MPAs/Network.
