The Resources Agency

# Memorandum

To : Survey Files

Date: November 30, 1976

From : Department of Fish and Game

Subject: Highland Lake, El Dorado County

One monofilament gill net was set for four hours on 7/15/76 and caught the following RT:

- CM(FL)
- 10.5 (4.2")
- 14.5 (5.8")
- 15.3 (6.0")
- 25.8 (10.2")

In addition, two anglers fishing for two angler hours caught 3 RT, 24.2 (9.5), 24.2 (9.5), 22.9 (9.0). All of the fish were in good condition. Several dead RT in the 10-12" range were observed in the outlet stream below the dam. These were probably from winter kill.

The five year recap is as follows:

1975	3,024	RTKJ
1974	2,175	RTKJ
1973	1,408	RT
1972	2,000	RT
1971	1,920	RT

We should continue planting 3,000 RTKJ annually. There is loose mortar and rock on the crest of the dam which will be repaired in 1977.
