Restocking East Park Reservoir ? *Colusa*

Yesterday, Allan Pollitt advised me that you phoned him to inquire as to what the fisheries management plans were for restocking East Park Reservoir.

Our present plans are to stock East Park Reservoir with a combination of smallmouth bass, largemouth bass, redear sunfish, and channel catfish. It is quite probable that threadfin shad will be included as a forage fish. However, since the threadfin is a newly introduced fish, it will be necessary to obtain clearance from the Director of the Department of Fish and Game before the introduction.

At present, it appears that all fish stocked will be fish of the year, since it is doubtful that larger fish will be available.
