

Treated in 1958 to control Duckweed  
and Tule. Success was only partial  
on an experimental basis. It  
appears to me the weeds exist  
in a swamp with intermittent  
puddles scattered hither + yon.  
When the dam is completed  
I would think that the increased  
water depth would alleviate some  
of the weeds.

a trail plant of Trout was  
suggested at one time but I don't  
know if it was ever made.
