Upper Sacto Lake, Colusa Co will be chemically treated on May 20, 1965 to eradicate the ~~golden shiners~~ ^{parasitic fish} golden shiners. The ~~golden shiner~~ population has ~~built up~~ ^{increased} to the point where the planted trout fingerlings are no longer able to compete and survive with ~~the rough fish~~. Consequently the trout fishing has been very poor this season.

The lake will remain toxic for five days. at that time, we will detoxify the lake. ~~and catch the trout and~~ ~~replant~~ The Dept of F & G expects to have the lake replanted with RT by June 10, 1965
