

Memorandum

AUG 14 1981

To : Assistant Deputy Director
Operations

Date: August 11, 1981

From : Department of Fish and Game - Region 2

Subject: Letts Lake, Colusa County

The attached field report describes the management opportunities available at the subject 30 surface acre lake built with WCB funds 20 years ago.

Approval is requested to plant channel catfish and redear sunfish. We will continue our popular April-June catchable trout program.

A decision is required at this time because the channel catfish become available each fall at Black Butte Dam which is near Letts Lake. The Corps dewater the catch basin for an annual inspection and routinely large numbers of prime catfish require rescue. The redear are now available at Central Valleys Hatchery.
